Sustainable Architecture Low Tech:

Sustainable Architecture and Urbanism Dominique Gauzin-Müller, 2002-07-01 Since the mid 1980s and in particular the 1992 environmental summit in Rio de Janeiro sustainability has become a global issue and the subject of international debate In the context of architecture sustainability implies the use of intelligent technology innovative construction methods ecologically friendly materials and use of environmentally friendly energy resources This book begins with an overview of the various approaches and developments in sustainable architecture followed by an in depth section on urbanism looking at several European towns In the third section the technologies materials and methods of ecological architecture are examined Concluding the volume are 23 sophisticated and innovative European case studies The author and architect Dominique Gauzin Müller has specialised on energy and environmental issues and ecological architecture for over 15 years

Emergency Driven Innovation Ernesto Antonini, Andrea Boeri, Francesca Giglio, 2020-09-24 This book explores the relationship between the circular economy and the building technologies within the quintuple helix innovation model The main question the book answers is whether and how the conversion of sustainable construction processes can be a powerful engine of innovation for the industry The post disaster settlements and temporary shelters are assumed as examples of what can be defined as circular buildings in regards to the technical arrangements and features material and process reversibility as the social and participative dimensions Several cases of these interventions are documented and classified by three thematic axes design building and living This highlighted new trajectories for innovation in building technology consistent with the social economic and productive dynamics that no longer allows for growing performance by increasing the resource demand A theoretic framework is traced supporting this vision which shows how the low technologies can respond to the transition of the economic model from linear to circular Within this trajectory the low tech design for remanufacturing represents a reference framework and a promising tool applicable to the building processes The enabling technologies and new paradigms for the transition to circular economy emerging from the European research scenario are also mapped outlining the possible future developments in line with open technical and societal challenges **Robust Architecture.**

Low Tech Design Edeltraud Haselsteiner, 2023-06-13 Robust architecture is designed to meet needs its structures are sufficient resilient and suited to the location It embraces the potential of simplicity traditional building methods and alternative ways of building sustainable architecture with an emphasis on local building materials solid craftsmanship proven construction methods and user participation Its design strategies combined with state of the art planning tools and research findings look ahead to a climate positive future The book gives detailed information on the concepts behind Robust Architecture and Low Tech Design It illuminates various strategies and demonstrates how they can be easily implemented Examples of realised projects with very different demands and requirement profiles show how straightforward robust building can be Low tech design for sustainable building concepts Analysis approaches methods and materials Low tech

matrix for easy navigation Best practice how implementation works Sustainable Architecture Arian Mostaedi,2002 Non renewable and increasingly scarce natural resources have necessitated a totally new approach to the use of building materials This book looks at enterprising contemporary architects who have realized this and are creating innovative designs that take into account the use of alternative energies adaptation to climatic factors vegetation and recycling This book argues that these designs represent a return to nature and a respect for the balance of the ecosystem Each proposal is accompanied by a large number of photographs construction details and plans **Sustainable Architectures** Simon Guy, Steven A. Moore,2005 As buildings are responsible for fifty per cent of CO2 emissions their design has become the focus of intense technical scrutiny Knowing how to build more technically efficient or ecologically responsible buildings and being able to assemble the social resources to do so requires different forms of knowledge and practice There is wide contestation over the optimal pathways to greener buildings design and great diversity in practices of sustainable architecture This volume brings together leading researchers from across the European Union and North America both to illustrate the diversity of practice and to provide a critical commentary on this key debate The reader is provided with an introduction to competing perspectives on the sustainable architecture debate international exemplars of differing practice and an overview of new theoretical and methodological resources for understanding and meeting the conceptual social and technical challenges of sustainable architecture **Ultra Low Tech Architecture** Josep Maria Minguet,2011 Packed with superb full colour photography detailed illustrations and architectural plans Ultra Low Tech Architecture presents readers with hand picked selection of projects in both urban and rural settings that utilise both ultra low tech materials such as wood straw mud stone and reeds and recycled materials **Low-tech Architecture** Josep Maria Minguet,2010 The low tech architecture comes to the oil crisis in opposition to the coldness of modern architecture and proposes an active user participation in the design and implementation of Community building with an accent This book presents a curated selection of projects with different organic materials such as wood straw mud stone and reeds from rural and urban areas Lowtech Sustainable Architecture Carles Broto,2002 Sustainable Approaches in Architecture and Urban Design Gökhan UŞMA,2024-12-22

Sustainability in Energy and Buildings Nacer M'Sirdi, Aziz Namaane, Robert J. Howlett, Lakhmi C Jain,2012-01-15
Welcome to the proceedings of the Third International Conference on Sustainability in Energy and Buildings SEB 11 held in Marseilles in France organised by the Laboratoire des Sciences de l'Information et des Systèmes LSIS in Marseille France in partnership with KES International SEB 11 formed a welcome opportunity for researchers in subjects related to sustainability renewable energy technology and applications in the built environment to mix with other scientists industrialists and stakeholders in the field The conference featured presentations on a range of renewable energy and sustainability related topics In addition the conference explored two innovative themes the application of intelligent sensing control optimisation and modelling techniques to sustainability and the technology of sustainable buildings These two themes combine

synergetically to address issues relating to The Intelligent Building SEB 11 attracted a significant number of submissions from around the world These were subjected to a two stage blind peer review process With the objective of producing a high quality conference only the best 50 or so of these were selected for presentation at the conference and publication in the proceedings It is hoped that you will find this volume an interesting informative and useful resource for your research
