Sustained Attention In Human Performance:

Sustained Attention in Human Performance Joel S. Warm, 1984-12-12 A detailed and critical treatment of research in sustained attention or vigilance by specialists in each sub area Provides a thorough overview of the area with many suggestions for future research Extensively reviews the difficult problems in real world applications in areas such as quality control air traffic control and nuclear power plant regulation Includes an extensive bibliography

Performance Under Stress James Szalma, Peter A Hancock, 2018-10-09 The world is a dangerous place and recent events have served to make it less safe There are many arenas of conflict and even combat across the world Such situations are the quintessential expression of stress you stand in imminent danger and live with the knowledge that you may be attacked injured or even killed at any moment How do people perform under these conditions How do they keep a heightened level of vigilance when nothing may happen in their immediate location for weeks or even months What happens when the bullets actually start flying How is it you distinguish friend from foe and each from innocent bystanders when in immediate peril of your life Can we design technology to help people make good decisions in these ultimately hazardous situations To what degree does your membership in a team act to dissipate these particular effects Can we generate sufficiently stressful field exercises to simulate these conditions and can we train and or select those most able to withstand such adverse conditions How will the next generation of servicemen deal with these inherent problems These are the sorts of questions that *Performance Under Stress* addresses This book is derived largely from a multiple year multiple university initiative MURI on stress and soldier performance on the modern electronic battlefield It involved leading researchers from many institutions who have brought their individual expertise to bear on these crucial contemporary concerns United by a common research framework these groups attacked the issue from different methodological and conceptual approaches ranging from traditional laboratory modeling and experimentation to realistic simulations from involved field exercises to personal experiences of actual combat conditions The insights generated have been distilled and presented as a benchmark of current understanding and provide future directions for research in this arena Although this work focuses on soldier stress and soldier performance the principles that are derived extend well beyond this single application Their findings can be applied to people facing the demands of the business world or research as much as to those who meet life or death situations such as homeland security first responders and law enforcement personnel

Automation and Human Performance Raja Parasuraman, Mustapha Mouloua, 2018-01-29 There is perhaps no facet of modern society where the influence of computer automation has not been felt Flight management systems for pilots diagnostic and surgical aids for physicians navigational displays for drivers and decision aiding systems for air traffic controllers represent only a few of the numerous domains in which powerful new automation technologies have been introduced The benefits that have been reaped from this technological revolution have been many At the same time

automation has not always worked as planned by designers and many problems have arisen from minor inefficiencies of operation to large scale catastrophic accidents Understanding how humans interact with automation is vital for the successful design of new automated systems that are both safe and efficient The influence of automation technology on human performance has often been investigated in a fragmentary isolated manner with investigators conducting disconnected studies in different domains There has been little contact between these endeavors although principles gleaned from one domain may have implications for another Also with a few exceptions the research has tended to be empirical and only theory driven In recent years however various groups of investigators have begun to examine human performance in automated systems in general and to develop theories of human interaction with automation technology This book presents the current theories and assesses the impact of automation on different aspects of human performance Both basic and applied research is presented to highlight the general principles of human computer interaction in several domains where automation technologies are widely implemented The major premise is that a broad based theory driven approach will have significant implications for the effective design of both current and future automation technologies This volume will be of considerable value to researchers in human *Human Performance, Situation Awareness, and Automation* Dennis A. Vincenzi, Mustapha Mouloua, Peter A. Hancock, 2005-01-06 In 2000 the Conference on Automation joined forces with a partner group on situation awareness SA The rising complexity of systems demands that one can be aware of a large range of environmental and task based stimulation in order to match what is done with what has to be done Thus SA and automation based interaction fall naturally together and this conference is the second embodiment of this union Moving into the 21st century further diversification of the applications of automation will continue for example the revolution in genetic technology Given the broad nature of this form of human machine interaction it is vital to apply past lessons to map a future for the symbiotic relationship between humans and the artifacts they create It is as part of this ongoing endeavor that the present volume is offered *Human Performance* D. Roy Davies, Gerald Matthews, Rob B. Stammers, Steve J. Westerman, 2013-10-23 Human Performance provides the student and researcher with a comprehensive and accessible review of performance in the real world and essential cognitive science theory Four main sections cover both theoretical and practical issues Section One outlines the perspectives on performance offered by contemporary cognitive science including information processing and neuroscience perspectives Section Two presents a multi level view of the performer as biological organism information processor and intentional agent It reviews the development of the cognitive theory of performance through experimental studies and also looks at practical issues such as human error Section Three reviews the impact of stress factors such as noise fatigue and illness on performance Section Four assesses individual and group differences in performance with accounts of ability personality and aging **Attention and Performance XI** Michael I. Posner, Oscar S.M. Marin, 2016-09-19 Originally published in 1985 this volume presents the proceedings of the 11th International

Symposium on Attention and Performance With few exceptions the central emphasis in previous meetings of the Attention and Performance Association was on the information processing approach to normal human cognition This emphasis had been supplemented on occasion by studies employing EEG methods but there had not been systematic attempts to relate the information processing approach to work in the neurosciences This volume seeks to emphasize the search for mechanism with such methods of approach as the following anatomical physiological neuropsychological behavioral and computational The editors believed that this was in accord with recent developing trends in cognition and particularly with developments in the study of attention at the time

Auditory Cognition and Human Performance Carryl L. Baldwin, 2016-04-21 Hearing and understanding sound auditory processing greatly enriches everyday life and enhances our ability to perform many tasks essential to survival The complex soundscape in which we live influences where we direct our attention how we communicate with each other and how we interact with technological systems

Human Performance in Automated and Autonomous Systems Mustapha Mouloua, Peter A. Hancock, 2019-09-19 This book examines recent advances in theories models and methods relevant to automated and autonomous systems The following chapters provide perspectives on modern autonomous systems such as self driving cars and unmanned aerial systems directly from the professionals working with and studying them Current theories surrounding topics such as vigilance trust and fatigue are examined throughout as predictors of human performance in the operation of automated systems The challenges related to attention and effort in autonomous vehicles described within give credence to still developing methods of training and selecting operators of such unmanned systems The book further recognizes the need for human centered approaches to design a carefully crafted automated technology that places the human user in the center of that design process Features Combines scientific theories with real world applications where automated technologies are implemented Disseminates new understanding as to how automation is now transitioning to autonomy Highlights the role of individual and team characteristics in the piloting of unmanned systems and how models of human performance are applied in system design Discusses methods for selecting and training individuals to succeed in an age of increasingly complex human machine systems Provides explicit benchmark comparisons of progress across the last few decades and identifies future prognostications and the constraints that impinge upon these lines of progress
