E. E. Lewis

The Ancient Engineers Mit Press Paperbacks In The History Of Science Technology:

The Study of Chivalry Howell Chickering, Thomas H Seiler, 1989-11-01 In a series of essays readers will find information about modern scholarship on the subject of chivalry and various suggestions for ways to teach some familiar and unfamiliar chivalric materials Short bibliographies are provided for teachers further use *The Engineering Project* Gene Moriarty, 2015-11-05 We all live our daily lives surrounded by the products of technology that make what we do simpler faster and more efficient These are benefits we often just take for granted But at the same time as these products disburden us of unwanted tasks that consumed much time and effort in earlier eras many of them also leave us more disengaged from our natural and even human surroundings It is the task of what Gene Moriarty calls focal engineering to create products that will achieve a balance between disburdenment and engagement How much disburdenment will be appropriate while still permitting an engagement that enriches one's life elevates the spirit and calls forth a good life in a convivial society One of his examples of a focally engineered structure is the Golden Gate Bridge which draws people to it enlivens and elevates the human spirit and resonates with the world of its congenial setting Humans bridge and world are in tune These values of engagement enlivenment and resonance are key to the normative approach Moriarty brings to the profession of engineering which traditionally has focused mainly on technical measures of evaluation such as efficiency productivity objectivity and precision These measures while important look at the engineered product in a local and limited sense But from a broader perspective what is locally benign may present serious moral problems undermining social justice environmental sustainability and health and safety of affected parties It is this broader perspective that is championed by focal engineering the subject of Part III of the book which Moriarty contrasts with modern engineering in Part I and pre modern engineering in Part II

Masterworks of Technology E. E. Lewis, 2010-05 In this absorbing exploration of technological creativity throughout the ages E E Lewis professor of mechanical engineering at Northwestern University eloquently tells the story of how science and engineering which had little in common until a few hundred years ago came together to create the technological world of the 21st century Today's technology is the product of a fascinating synergy of science's search for comprehension of the material universe and engineering's drive to build things and make them work In the 20th century this synergy achieved many unprecedented successes the most spectacular of which is arguably the first moon landing of the Apollo program Rocket science now symbolic of humanity's most complex technological endeavors is the culmination of centuries of achievements by architects of pyramids and cathedrals medieval craft guilds and pioneering inventors and scientists from the Renaissance through the Industrial Revolution Melding his own personal experiences from visiting Chartres Cathedral to flying aboard a Boeing 777 with vivid historical vignettes the author skillfully demonstrates the importance of craft tradition scientific method production organization economics and more to the creation of modern technology The many topics that Lewis illuminates include the slow evolution of the wheelwright's craft the background and

training of the architect engineers who undertook the construction of medieval cathedrals the importance of patronage and venture capitalists in realizing the big ideas of past and present the increasing use of visualization as seen in Leonardo's notebooks Galileo's immense contribution of bringing science and engineering together the increasing importance of basic science as the seedbed of engineering and design innovations the challenge of attempting unprecedented feats while minimizing risk as exemplified by space flight and much more Whether Lewis is discussing the distribution of weight along flying buttresses the challenges faced by Morse in engineering the telegraph or the Apollo program's monumental team effort the author's deep knowledge of and enthusiasm for his subject and his gift for engaging lively prose make for a fascinating exploration of science and engineering through the ages E E Lewis Evanston IL the former chair of the Department of Mechanical Engineering is professor of mechanical engineering at the McCormick School of Engineering and Applied Science at Northwestern University He is the author of three engineering textbooks and numerous journal articles

The Making of Green Engineers Andrew Jamison, 2022-06-01 This book discusses the ways in which engineering educators are responding to the challenges that confront their profession On the one hand there is an overarching sustainability challenge the need for engineers to relate to the problems brought to light in the debates about environmental protection resource depletion and climate change There are also a range of societal challenges that are due to the permeation of science and technology into ever more areas of our societies and everyday lives and finally there are the intrinsic scientific and technological challenges stemming from the emergence of new fields of technosciences that mix science and technology in new combinations In the book the author discusses and exemplifies three contending response strategies on the part of engineers and engineering educators a commercial strategy that links scientists and engineers into networks or systems of innovation an academic strategy that reasserts the traditional values of science and engineering and an integrative strategy that aims to combine scientific knowledge and engineering skills with cultural understanding and social responsibility by fostering what the author terms a hybrid imagination Professor Jamison combines scholarly analysis with personal reflections drawing on over forty years of experience as a humanist teaching science and engineering students about the broader social political and cultural contexts of their fields The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark PROCEED funded by the Danish Strategic Research Council for which Professor Jamison has served as coordinator
