Seasonal Patterns of Stress, Immune Function, and Disease Randy J. Nelson,Gregory E. Demas,Sabra L. Klein,Lance J. Kriegsfeld,2002-03-25 This book presents evidence that infection is cyclical with the seasons and that this phenomenon is mirrored in cycles of immune function The book identifies the mechanisms by which immune systems are bolstered to counteract seasonally recurrent stressors such as extreme temperature reductions and food shortages Stress infectious diseases autoimmune diseases and human cancers are examined and the role of hormones such as melatonin and glucocorticoids is considered The book begins with an overview of seasonality biological rhythms and photoperiodism and basic immunology and then discusses seasonal fluctuations in disease prevalence immune function and energetics and endocrinology as they relate to immune function The clinical significance of this issue is also addressed as such seasonal changes may play an important role in the development and treatment of infections This first monograph to examine seasonal immune function from an interdisciplinary perspective will serve practitioners as well as advanced undergraduates and graduate students in biology immunology human and veterinary medicine neuroscience endocrinology and zoology

The Stress Response of Critical Illness: Metabolic and Hormonal Aspects Jean-Charles Preiser,2016-03-24 This book demonstrates how the latest insights into the physiopathology of the stress response can be integrated into clinical practice The topic is particularly relevant since the metabolic changes triggered by acute stress including adaptive responses such as resistance to anabolic signals have recently been more precisely delineated The underlying mechanisms of these changes are also now better understood The authors analyse how these advances could result in better management and more effective prevention of the long term clinical consequences of the alterations occurring during the acute phase An international panel of respected experts discusses these topics and describes the management of some common clinical conditions

**Strategies in Cold** Lawrence C.H. Wang,2012-12-02 Strategies in Cold Natural Torpidity and Thermogenesis

is a collection of review papers presented at the Fifth International Symposium on Mammalian Hibernation held at Jasper Park Lodge Alberta Canada on October 3 8 1977 The book is organized into four sections encompassing 20 chapters that cover the advances made since the 1971 symposium in the areas of molecular biochemical and cellular adaptations of natural torpidity and the role of the central nervous system in regulation of natural torpidity The opening section discusses the possible ways of generating circannual cycle in constant condition and the historical progress in understanding the mechanism of shallow daily torpor and its distribution in various families predominantly from the marsupial insectivore and rodent orders The application of simple economic models to biological systems to illustrate the principles of torpor in non mammalian organisms and temperature regulation is also described in this text Section II examines the central nervous structures involved in thermoregulation in hibernators and compares these data with the results of corresponding experiments in non hibernators Topics on the influence of serotonergic pathways in the brain on hypothalamic hormonal factor release and the maintenance and regulation of hibernation through a parasympathetic response are discussed in this section Section III deals with the cellular and biochemical adaptations in natural torpidity with an emphasis on the metabolic and endocrine changes in hibernation Section IV tackles postulated mechanisms for nonshivering thermogenesis and the neurohumoral factors regulating these mechanisms in mammals exposed to short term as well as to prolonged periods of cold A discussion on significance and possible central mechanisms of thermoregulatory threshold deviations in the course of thermal adaptation is also provided
