Environmental Sustainability Subhash Babu, Sanjay Singh Rathore, Vinod Kumar Singh, Raghavendra Singh, 2023-10-24

Researchers and policy planners are in search of a solution to address the twin challenges of maximizing agricultural production while maintaining improving ecosystem sustainability. Enhancing farm productivity is needed in certain regions of the world to satisfy local food consumption and farmers' needs. Linear economy based input intensive conventional agriculture CAPS has increased production output but has not made agriculture more sustainable. Henceforth a farming system that aims to reduce the adverse impact on the environment as well as enhance agricultural productivity by reducing environmental footprint and improving soil health and economic wellbeing is needed in the present day. Integrated organic farming systems IOFS involve residue recycling, bio intensive cropping, high tech horticulture, mushroom, dairy, poultry, fishery, apiary etc can improve the ecosystem health and augment the income and livelihood security of the growers. Worldwide IOFS are gaining popularity due to improved ecosystem services and improving farm productivity and livelihood security. Hence IOFS a circular economy based reuse, recycle, repair agricultural production system can be alternatives to energy intensive inputs based on CAPS. Hence there is an urgent need to select suitable IOFS models with proper resource optimization for productivity maximization and better ecosystem sustainability. Undoubtedly IOFS reduces energy use from synthetic agrochemicals but food production in IOFS is highly dependent on fossil fuel energy that must be addressed urgently. Despite the enormous positive outlooks there are several challenges in the adoption of IOFS models. The IOFS is a multiproduct oriented production system that needs multi specialties and marketing. Capacity building and infrastructure development are also great challenges in adopting IOFS. Moreover the development of IOFS models is highly individualistic and location specific. Production systems need proper resource optimization and characterization. Hence the development of site specific IOFS models to maintain food quality with productivity improvement is a genuine issue to the researchers which needs to be addressed. Papers original research review letter to the editors spanning across the discipline related to the IOFS development in sustainable ways are encouraged for inclusion in this research topic. Papers should explicitly cover ecosystem restoration, farm productivity and profitability and could have a specific focus on the following areas: the IOFS models for enhancing productivity and environmental quality through an integrated management approach aiming at the maximization of use efficiencies; the management of biomass waste to restore the soil fertility and ecosystem services; the effect of integrated management practices on greenhouse gas emissions and energy use. Critical approaches for climate smart food production systems.

The Process of Stratification Robert M. Hauser, David L. Featherman, 2013-09-03

The Process of Stratification Trends and Analyses discusses the conceptual scheme developed by Blau and Duncan. The book elaborates Blau and Duncan's description and analysis of socioeconomic inequality, stratification and inequality of opportunity in American society during the early 1960s. The authors review the assumptions and methods they point to a different direction from the widely held assumption that occupational socioeconomic status is the primary determinant to mobility. They also use the

Alphabetical Index as the basis for better collection method on data relating to occupation industry and class of worker As regards occupational mobility the authors note that such mobility is limited by the depletion of occupational groups that higher status occupations have sourced from They also point that American society is homogenous in the sense of the determinants of socioeconomic achievements can exert influence The authors then discuss an exercise in theory construction of intergenerational transmission of income They conclude that income mobility is similar to occupational or educational mobility to be more precise they note that empirical evidence should be gathered This book can prove useful for economists sociologists policy makers as well as academicians involved in societal studies
