Steatohepatitis Nash And Ash Falk Symposium:

Steatohepatitis (NASH and ASH) U. Leuschner, O.F.W. James, H. Danczygier, 2001-05-31 This book is the proceedings of the Falk Symposium No 121 on Steatohepatitis NASH and ASH held in Den Haag The Netherlands on October 14 15 2000 The histological features of what we now call non alcoholic steatohepatitis were described as early as 1962 by the Honorary President of the Symposium Professor Herbert Thaler from Vienna Others followed and in 1980 Jürgen Ludwig one of the speakers of this symposium introduced the name non alcoholic steatohepatitis or NASH In a Consensus Symposium organized by the National Institute of Health NIH in Washington USA in December 1998 NASH was recognized as one of the most common liver diseases in Western countries when viral hepatitis and heavy alcohol consumption were excluded ASH or alcoholic steatohepatitis is more common than NASH since alcohol is omnipresent in Western as well as Eastern cultures Histologically NASH and ASH are similar or even identical Morphological findings range from fatty degeneration to inflammation and fibrosis and may end up in liver cirrhosis In spite of the well defined morphological features our knowledge of epidemiology aetiology and pathogenesis is full of gaps especially for NASH Therefore it is the purpose of this book to show the state of the art to discuss recent scientific data and to suggest possible treatment strategies hoping to stimulate clinicians as well as scientists

VI International Symposium on Inflammatory Bowel Diseases D. Rachmilewitz, R. Modigliani, D.K. Podolsky, D.B. Sachar, N. Tozun, 2002-06-30 This book the proceedings of Falk Symposium No 123 VI International Symposium on Inflammatory Bowel Diseases held in Istanbul Turkey on September 3 5 2001 focuses on the issues and controversies pertinent to IBD in the 21st century The achievements in medical surgical and in the basic sciences in the last twenty years since the first Jerusalem IBD Symposium are summarized in detail Controversies with respect to the medical treatment of inflammatory bowel diseases are discussed One section deals with surgical issues such as laparoscopic surgery in inflammatory bowel diseases ileo anal pouches and the surgical treatment of Crohn's disease The last section is devoted to the biological treatment of IBD and to the needs both in medical science and in the clinic

Future Perspectives in Gastroenterology Martin C. Carey, J. Mossner, Petr Dite, A. Gabryelewicz, V. Keim, 2008-08-21 In 1996 an international symposium entitled Future Perspectives in Gastroenterology was held in the city of Leipzig State of Saxony Germany Leading scientists in diverse fields of gastroenterology presented their recent findings and undertook the propitious risk of speculating about future directions Thanks once again to the generous support of the Falk Foundation it was possible to revisit a symposium with the same title but held this time in the beautiful rebuilt city of Dresden in Saxony This book contains the proceedings of the Falk Symposium No 161 on Future Perspectives in Gastroenterology held October 11 12 2007 It presents many innovative themes as well as new faces and offers a rich opportunity to learn firsthand about the latest scientific discoveries in the broad field of gastroenterology Several of these novel developments are probably well on their way to being implemented in clinical practice

Trends and Controversies in IBD: Evidence-Based Approach Or Individual

Management? A. Dignass, H. Lochs, E.-F. Stange, 2004-04-30 In spite of significant scientific progress in recent years the aetiopathogenesis of chronic inflammatory bowel diseases IBD remains elusive With a prevalence of 1 700 to 1 500 in central Europe both diseases are not rare However most physicians will generally treat only a few patients with IBD in their clinical practice Because of this limited experience and the variety of clinical IBD manifestations IBD patients are frequently treated in specialized tertiary care centres Nevertheless IBD patients will also consult less specialized general practitioners who will not be able to focus extensively on the management of IBD patients due to time constraints Physicians who take care of IBD patients have to select among an ever increasing amount of new scientific information in order to provide optimal and up to date care to their patients In the era of evidence based medicine it is often under debate whether evidence based medicine may really improve the management of IBD patients or whether the diversity and complexity of IBD needs an individual and patient oriented approach This book the proceedings of the Falk Symposium 134 on Trends and Controversies in IBD Evidence Based Approach or Individual Management held in Berlin Germany on 12-13 June 2003 critically discusses established and emerging new concepts in the field of IBD It critically analyzes evidence based and individual approaches in the management of IBD and discusses these approaches with the help of selected case reports **Malignant Liver**

Tumours: Basic Concepts and Clinical Management F. Berr, J. Bruix, J. Hauss, Ch. Wittekind, J. Wands, 2002-11-30 Hepatocellular carcinoma HCC and cholangiocarcinoma CC both increasing in incidence have become a major topic of basic and clinical research as well as clinical practice in hepatology Experts in the field update the current concepts on the carcinogenesis of HCC and CC such as genetic alterations in the pathways of cell cycle and apoptosis regulation the hypothesis of dedifferentiation of hepatocytes to the malignant phenotype vs that of activation of hepatic progenitor cells incapable of maturation maturation arrest hypothesis In spite of an increasing number of genetic alterations described in human HCC as well as cell regulatory pathways tested in experimental HCC models the key hits causing progression of the cell cycle in imbalance with apoptosis tissue invasive growth and metastatic potential of cell clones still remain elusive Very powerful genomic and proteomic techniques are promising insights into the carcinogenesis of liver malignancies that will allow more efficient therapeutic strategies The current concepts on risk profiling surveillance of risk groups and therapeutic strategies are evidence based for HCC and less detailed for CC Surveillance of risk groups improves detection of liver tumours in curable stages Best strategies for curative treatment of HCC use neoadjuvant antitumour therapies before liver transplantation and a role is emerging for living donor related liver transplantation New palliative therapies for HCC are in the experimental stage with biological response modifiers including angiogenesis inhibitors and entering phase II clinical trials with the alpha fetoprotein derived vaccines **State of the Art of Hepatology** H.E. Blum, M.P. Manns, Marianne Manns, 2004-06-30 In honour of Hans Popper's 100th birthday **Autoimmune Diseases in Pediatric Gastroenterology** Faruk Hadziselimovic, 2002-09-30 This book is the proceedings of the Falk Symposium No 127 on Autoimmune Diseases in

Paediatric Gastroenterology IV International Falk Symposium on Paediatric Gastroenterology held in Basel Switzerland on November 8-9 2001. The symposium focused on the role of the immune system both the acquired and the innate systems in inflammatory bowel disease (IBD) in children and adolescents. The innate system has an important fundamental role in host defence by initiating immune responses against potentially deleterious matter. However, a mutation within the innate system may elicit an immune response against the host, hence an autoimmune response. Chronic autoimmune hepatitis occurs predominantly in young people and especially in women. Immunological changes are conspicuous. Tissue antibodies are found in a large number of patients. This is a disease of disordered immunoregulation marked by a deficit in suppressor T cells causing the production of autoantibodies against specific hepatocyte surface antigen. Liver membrane protein is found in the sera of patients with autoimmune chronic acute hepatitis and with primary biliary cirrhosis (PBC). The latter condition of progressive granulomatous destruction of intrahepatic bile ducts is in many respects analogous to the graft versus host syndrome where the immune system has become sensitized to foreign HLA molecules. Primary sclerosing cholangitis (PSC) is another condition of unknown origin. All parts of the biliary tree can be involved in a chronic fibrosing inflammatory process that results in obliteration of the biliary tree and ultimately in biliary cirrhosis. About half of the patients also suffer from ulcerative colitis and rarely from Crohn's disease. Circulating antibodies to some antigens are found in obstructed portal tracts as well as increased concentrations of biliary immune complexes in patients with PBC. In all three previous Falk symposia on paediatric gastroenterology, attention was focused on the role of the innate immune system in the aetiology of IBD. It has become increasingly clear in recent years that the innate system has a much more important and fundamental role in host defence. The decision to initiate an immune response is one of the major roles of the innate system. Mutations within this system could transform it into becoming constitutively active, resulting in an inflammatory reaction and thus eliciting an autoimmune response. Following an introduction to the basic phenomena of autoimmunity, the proceedings discuss clinical aspects of autoimmune diseases. In particular, current knowledge and the state of the art about the diagnosis and treatment of the autoimmune diseases of the gastrointestinal tract are described by world renowned experts. The book also contains the short presentations on selected topics as well as abstracts of the mini posters read by title which were included in the symposium.

Pathogenesis and Clinical Practice in Gastroenterology I. Ferkolj, Peter R. Galle, Alfred Gangl, B. Vucelic, 2011-04-28.

The translation of new molecular understanding of disease into clinical practice in gastroenterology is a special challenge. The Falk Symposium No 160 entitled Pathogenesis and Clinical Practice in Gastroenterology held 15-16 June 2007 in Portorož, Slovenia, provided a stimulating framework to bridge discussions from bench to bedside. The proceedings of the symposium are contained in this book and the unifying theme is the growing understanding of inflammation as a driving force in chronic disease leading to disability and malignancy. Aspects of early detection endoscopically or via molecular markers are covered as well as in-depth discussions of the validation of new findings in

clinical practice Whilst on a molecular basis gastroenterologists and hepatologists try to shed light on the same intracellular pathways clinical implications such as surveillance of cancer in IBD or chronic hepatitis with cirrhosis have to be tailored to specific needs New therapeutic agents approved or on the horizon of early clinical studies will dramatically change the options of patients with chronic disease such as Crohn's disease viral hepatitis or hepatocellular carcinoma

Bile Acid Biology and its Therapeutic Implications G. Paumgartner, D. Keppler, U. Leuschner, A. Stiehl, 2005-03-02 This book is the proceedings of the 18th International Bile Acid Meeting held as the Falk Symposium 141 in Stockholm Sweden on June 18 19 2004 The International Bile Acid Meetings have become some of the most important meetings in the bile acid field worldwide since Herbert Falk decided to sponsor these Symposia in biannual sequence in 1970 The 17 International Bile Acid Meetings in the past have been a great stimulus for new ideas and methods as well as the development of therapeutic applications of bile acids They have always been a forum where basic scientists and clinicians interact Many novel results of bile acid research were first presented at these meetings The meeting in Stockholm again attracted a large number of basic and clinical scientists interested in bile acid and biliary research from all over the world Knowledge about the regulation of bile acid synthesis bile acid transport and enterohepatic circulation in health and in disease has increased considerably during recent years Accordingly bile acid research is alive as ever A new chapter of bile acid research was opened by the finding that bile acids are ligands of nuclear receptors which regulate synthesis metabolism and transport of bile acids and steroids A large part of the book is devoted to these topics The 18th International Bile Acid Meeting was again a truly interdisciplinary symposium at the highest scientific level Its participants enjoyed hearing the latest reports on bile acid research in the city where so many seminal studies on bile acids were performed It is hoped that the readers of this book will share the enjoyment

Immunological Diseases of Liver and Gut M. Lukás, M.P. Manns, J. Spicak, E.-F. Stange, 2004-06-30 This book is the proceedings of the Falk Symposium No 135 held in Prague Czech Republic on September 12 13 2003 and is dedicated to the important issue of immunological aspects of diseases of the liver and gut Without any doubt immunological pathways are among the most important and universal factors in the pathogenesis of all diseases Their importance is also constantly increasing because these principles have been adopted in clinical practice for both diagnostic and therapeutic procedures Chapters by prominent experts will stimulate new ideas and set the scene for productive discussion on this topic

Medical Imaging in Gastroenterology and Hepatology F. Hagenmüller, 2002-12-31 This book the proceedings of Falk Symposium 124 Medical Imaging in Gastroenterology and Hepatology Progress in Gastroenterology and Hepatology Part I held in Hannover Germany on September 28 29 2001 aims to demonstrate the newest developments in the various imaging techniques for diagnosis and therapy coupled with overviews by renowned international experts In this book up to date technologies in medical imaging and image documentation as well as the most modern transmission techniques should bridge the gap between futuristic research and everyday clinical practice

Immunosuppression in Inflammatory

Bowel Diseases K. Fellermann,D.P. Jewell,W.J. Sandborn,J. Schölmerich,E.-F. Stange,2001-06-30 The aetiology of the chronic inflammatory bowel diseases Crohn s disease and ulcerative colitis is still enigmatic The therapeutic approach has therefore traditionally focused on anti inflammatory principles including corticosteroids and aminosalicylates Since a significant proportion of patients is steroid dependent or refractory and because of the problematic side effects of long term systemic steroids active immunosuppression has gained acceptance in the field The classical immunosuppressants azathioprine and 6 mercaptopurine have long been evidence based in IBD but underused Recently methotrexate and cyclosporine have also been proven to be effective in certain situations Newer drugs like tacrolimus mycophenolate and others may be similarly useful but their potential is still unclear Finally the immune modifiers including IL 10 and TNF antibodies have been successfully subjected to controlled trials Other experimental drugs discussed in this book are on the horizon This volume is the Proceedings of Falk Symposium 119 held in Freiburg im Breisgau Germany October 3 4 2000 and covers systematically the field of immunosuppression in inflammatory bowel diseases It is hoped that it will further the prudent use of these drugs in the proper clinical situations by increasing our understanding of both the mechanisms of action and the clinical benefit to the patient *Cytokines in Liver Injury and Repair* A.M. Gressner,P.C. Heinrich,S. Matern,2002-06-30 This book the proceedings of Falk Symposium No 125 on Cytokines in Liver Injury and Repair Progress in Gastroenterology and Hepatology Part II held in Hannover Germany on September 30 October 1 2001 provides an update of our current knowledge on the role of cytokines in various human and experimental liver diseases and on their present and prospective use in therapeutic trials The book contains chapters by most well known experts in the field who have contributed significantly to our present knowledge on cytokines in liver injury and repair **Autoimmune Liver Disease** H.-P. Dienes,U. Leuschner,A.W. Lohse,M.P. Manns,2005-07-12 Autoimmune processes in the liver can cause severe damage and destruction leading to cirrhosis and liver failure The clinical spectrum of autoimmune liver disease is very wide and diagnostic difficulties often stand at the beginning of the patient s medical career While in autoimmune hepatitis immunosuppressive therapy has long been shown to be life saving therapeutic progress is small in primary biliary cirrhosis and questionable in primary sclerosing cholangitis New approaches to treatment will be needed in the future but require better understanding of the pathogenesis of the underlying disease process This book the proceedings of Falk Symposium 142 on Autoimmune Liver Disease held in Freiburg Germany on 12 13 October 2004 Part I of the Gastroenterology Week Freiburg describes possible mechanisms of pathogenesis discusses diagnostic criteria and takes up controversies concerning treatment options In view of the relatively frequent manifestation of autoimmune hepatitis in childhood in particular paediatric aspects of autoimmune liver disease and the role of liver transplantation are given prominence **Inflammatory Bowel Disease** M. Campieri,2002-03-31 This book is the proceedings of the Falk Symposium No 122 on Inflammatory Bowel Disease A Clinical Case Approach to Pathophysiology Diagnosis and Treatment held in Bologna Italy on June 22 23 2001 and

deals with some major issues concerning Genetics of IBD Pediatrics in IBD Early vs Late IBD Bacteria and Gut Inflammation Refractory CD Fistulizing CD Refractory Distal Colitis and Complications of Ileal Pouch Anastomosis The main aim of the meeting was to highlight the value of an integrated clinical approach and the importance of clinical research in developing innovative methods of treatment

Mechanisms of Intestinal Inflammation R. Duchmann, 2004-04-30 In recent years considerable progress has been achieved in regard to our understanding of the induction and modulation of the immune response in the intestinal mucosa It is clear that this mucosal immune reaction is predominantly steered by certain T cell populations which are characterized by their cytokine secretion profile Less well known are the conditions under which the uptake and processing of a specific antigen leads to a certain immune response whether it be protective tolerant or inflammatory However here again distinct progress has been made in our understanding Equally significant for immune regulation in the gut appears to be so called innate immunity Every shift of equilibrium in the highly regulated mucosal immune reaction is accompanied by an inflammatory reaction and destruction of the mucosa In nearly all cases this inflammatory response is dependent on the presence of bacterial intestinal flora This book the proceedings of Falk Symposium 133 on Mechanisms of Intestinal Inflammation Implications for Therapeutic Intervention in IBD held in Berlin Germany on 10 11 June 2003 summarizes present knowledge in the area of unspecific and specific immune reactions in the gut recording the gaps in our knowledge and in particular presenting the possibilities of targeted intervention The link to inflammatory bowel diseases Crohn s disease and ulcerative colitis is always in focus Chapters by an international panel of basic scientists clinical researchers and clinicians also record the problems which can originate through today s possible modulation of the immune reaction setting the basis for review of clinical problems This book is valuable readings for all scientists and physicians who from different perspectives have an interest in research on IBD and in the clinical management of these diseases

Topical Steroids in Gastroenterology and Hepatology A. Dignass, V. Gross, H.J. Buhr, O.F.W. James, 2004-02-29 This book the proceedings of a Falk Workshop on Topical Steroids in Gastroenterology and Hepatology held in Berlin Germany on 14 June 2003 critically discusses the current role of budesonide in gastroenterology hepatology surgery and oncology and focuses especially on potential new indications for the use of budesonide A number of smaller clinical studies and anecdotal case reports with impressive clinical effects are reported in patients with gastrointestinal hepatic oncological and surgical problems In addition the use of budesonide for the treatment of distal ulcerative colitis and ileocolonic Crohn s disease is evaluated with respect to its role in an evidence based management of IBD Finally as clinical experience with the use of budesonide is increasing safety issues and the side effect profile of budesonide is addressed

Bile Acids and Pregnancy U. Leuschner, P.A. Berg, J. Holtmeier, 2002-12-31 Pregnancy represents an allograft in so far that half of the antigens are foreign to the mother Therefore a bidirectional interaction between the maternal and the fetal immune systems must exist which could be disturbed by preexisting autoimmune liver diseases Since nowadays autoimmune

liver diseases are increasingly detected as early stage diseases due to modern diagnostic procedures e g in women of childbearing age and since the number of posttransplant pregnancies has become an issue due to improved survival questions concerning pregnancy autoimmune liver disease and treatment options with bile acids and or immunosuppressants are of an ever increasing interest This book the proceedings of a Falk Workshop held in Freiburg Germany on June 2 2002 is certainly unable to give any definite answers to any of the hundreds of still remaining questions in this fascinating field but hopefully it will help to stimulate and initiate cooperation among immunologists bile acid researchers gynaecologists and internists

Hepatocyte Transplantation S. Gupta, Peter L.M. Jansen, J. Klempnauer, M.P. Manns, 2002-09-30 In recent years there has been an increasing need for transplantation but the number of donor livers available has increased only slightly despite intensive public relations activities New concepts in the field of transplantation for instance the transplantation of living donor organs or the splitting of organs are urgently required to safeguard the treatment of patients with severe liver disease The development and clinical application of cell therapy for patients with liver disease could soon present a significant enhancement of the therapeutic options The aim of such cell therapy is to repair or improve the biological function of the chronically and acutely damaged liver Even though systematic trials are not available individual case reports and small series already show promising clinical results Present concepts of cell therapy for liver diseases based on the use of primary hepatocytes have recently been considerably extended through new data on the biology of stem cells The adult haematopoietic stem cell as a pool for hepatocyte grafts what would be the perspectives for the clinical application This book is the proceedings of the Falk Symposium No 126 on Hepatocyte Transplantation Progress in Gastroenterology and Hepatology Part III held in Hannover Germany October 2 3 2001 and is a forum for basic research but also for questions concerning clinical applications in the field of hepatocyte transplantation

Disease Progression and Carcinogenesis in the Gastrointestinal Tract P.R. Galle, G. Gerken, W.E. Schmidt, B. Wiedenmann, 2003-09-30 Development and progression of gastrointestinal disease involves inflammatory vascular fibrogenetic and immune reactions accompanied by deregulation of cellular growth and death often resulting in cancer of the organs affected This book the proceedings of Falk Symposium 132 on Disease Progression and Carcinogenesis in the Gastrointestinal Tract held in Freiburg Germany October 9 10 2002 addresses these various cellular processes in five sections in order to build up a broad pathogenic concept of gastrointestinal disease purposely going beyond organ specific research Each section combines experts in the various fields of molecular medicine together with clinical scientists in order to stimulate interdisciplinary discussion In addition clinical chapters focus on new findings in both diagnostics and therapeutics
