Stereospecific Polymerization Of Isoprene:

Stereospecific Polymerization of Isoprene Elena Ceausescu, 2013-10-22 Stereospecific Polymerization of Isoprene a doctoral dissertation by Dr Elena Ceausescu is a study of the synthesis of cis 1 4 polyisoprene rubber an elastomer of synthetic rubber whose structure and properties are similar to that of natural rubber This elastomer is primarily used in the manufacture of tires belts hoses matting flooring dampeners and other synthetic rubber goods The book is organized into two parts Part I the Ph D thesis focuses on the explanation and exposition of the polymerization reaction properties of the polymer and certain theoretical aspects related to the polymer s reaction mechanism and kinetics Part II presents data derived from an extensive variety of experiments and tests intended to serve as a basis for the industrial production of cis 1 4 polyisoprene rubber The text will be an interesting book for materials engineers industrial engineers chemists and science students engaged in the study of polymers

Stereoregular Polymers and Stereospecific Polymerizations Giulio Natta, Ferdinando Danusso, 2013-10-22 Stereoregular Polymers and Stereospecific Polymerizations The Contributions of Giulio Natta and his School to Polymer Chemistry Volume 1 covers the developments in understanding the reactions nomenclature and physico chemical properties of polymers This volume is composed of 82 chapters and starts with surveys of the synthesis and crystal structure of polymers Significant chapters are devoted to the characterization of crystalline polymers with emphasis on the determination of their viscosity and molecular weight Other chapters deal with stereospecific polymers of olefins mechanism of stereospecific catalysis reaction kinetics This volume also considers the polymerization of synthetic elastomers and the copolymerization of olefins as well as their reaction kinetics The remaining chapters describe the X ray characterization of isotactic polymers This book is directed toward polymer chemists

Ziegler-Natta Catalysts Polymerizations John Jr. Boor, 2012-12-02 Ziegler Natta Catalysts and Polymerizations reviews the general aspects of Ziegler Natta catalysts and polymerizations of olefins dienes and many other types of monomers Topics covered include the physical state of the polymer during polymerization modification of Ziegler Natta catalysts by third components and termination of polymer chain growth The oxidation state of catalysts and active centers is also discussed along with copolymerizations and block polymerizations This book is comprised of 23 chapters and begins with an overview of Ziegler Natta catalysts and polymerizations their historical origins scientific and commercial importance and major advances in polymer science The next chapter focuses on definitions and stereochemistry of Ziegler Natta catalysts together with analytical methods used to identify and quantitatively measure their structures Some of the polymers produced commercially with Ziegler Natta catalysts are considered The discussion then turns to mechanisms for initiating and propagating olefins mechanisms for stereochemical control of conjugated and nonconjugated dienes and the basic kinetic parameters that characterize Ziegler Natta polymerizations This monograph is written especially for chemistry and engineering graduate students and for industrial chemists engineers and managers who may become involved in a Ziegler Natta problem
