Polymer-based smart materials have become attractive in recent years due to the fact that polymers are flexible and provide many advantages compared to inorganic smart materials: they are low cost, they are easy to process and they exhibit good performance at nano and microscale levels. This volume focuses on a different class of polymers that are used as smart materials in the areas of biotechnology, medicine and engineering. The volume aims to answer these questions: How do we distinguish smart materials and how do they work? The chapters lay the groundwork for assimilation and exploitation of this technological advancement. Four of the key aspects of the approach that the authors have developed throughout this book are highlighted: namely, the multidisciplinary exchange of knowledge, exploration of the relationships between multiple scales and their different behaviors, understanding that material properties are dictated at the smallest scale and therefore the recognition that macroscale behavior can be controlled by nanoscale design. **Innovative Developments in Virtual and Physical Prototyping** Paulo Jorge da Silva Bartolo, 2011-09-16. *Innovative Developments in Virtual and Physical Prototyping* presents essential research in the area of Virtual and Rapid Prototyping. The volume contains reviewed papers presented at the 5th International Conference on Advanced Research in Virtual and Rapid Prototyping, hosted by the Centre for Rapid and Sustainable Product Development of the Polytechnic Institute of Leiria, Portugal, from September 28 to October 1, 2011.
