of investment can affect the investment rate and the permanent growth rate of the economy The paper develops a method to obtain consistent data on relative prices for a large set of countries Using these data in cross country regressions it examines how economic growth is affected by relative prices The results of these empirical tests identify the relative prices as a key factor affecting investment and growth

Tax Policy for Economic Recovery and Sustainable Development After COVID-19 Tetiana Kaneva,Igor Chugunov,Mykola Pasichnyi,Nikitishin Andriy,Nataliia Husarevych,2022 The optimal taxation level and tax structure depend on numerous factors and enormously differ from country to country However the two mentioned tax policy instruments could ensure economic recovery and sustainable economic growth This article aims to examine the effects of tax policy on economic development and evaluate the role of appropriate tax instruments in speeding up recovery The results showed that tax level harms the GDP per capita growth rate in Central Europe and Baltic states over the 2000-2021 period Another vital finding is the increase in both overall employment and investment to GDP ratio positively affected the real GDP per capita growth rates In order to foster economic growth government might use tax cuts and other stimuli both for distortionary and non distortionary taxes The tax policy's institutional potential should be improved to neutralize the adverse effects of COVID-19 impact and enhance macroeconomic sustainability

Tax Incentives and Economic Growth Barry Bosworth,1984 In this study the author attempts to clarify the basic analytic issues about incentives and to summarize the empirical evidence and examines the difficulties of coordinating tax incentive measures with fiscal and monetary policies
