Applied Analog Electronics: A First Course In Electronics Kevin Karplus,2023-06-06 This textbook is for a first course on electronics It assumes no prior electronics experience but does assume that students have had calculus 1 single variable differential calculus and high school physics A key idea of the course is that students need a lot of design experience and hands on work rather than a lot of theory The course is centered around the labs which are a mix of design labs and measurement modeling labs This unique volume takes students from knowing no electronics to being able to design and build amplifier and filter circuits for connecting sensors to microcontrollers within 20 weeks Students design a digital thermometer a blood pressure meter an optical pulse monitor an EKG an audio preamplifier and a class D power amplifier They also learn how to measure and characterize components including impedance spectroscopy of a loudspeaker and of electrochemical electrodes Related Link s , **Holographic Materials and Optical Systems** Izabela Naydenova,Tsvetanka Babeva,Dimana Nazarova,2017-03-22 Holographic Materials and Optical Systems covers recent research achievements in the areas of volume holographic optical elements and systems development of functionalized holographic recording materials and applications in holographic imaging and metrology Designs of single and multiplexed volume holographic optical elements for laser beam shaping combining and redirection are covered and their properties are studied theoretically and experimentally The high impact of holography in imaging and metrology is demonstrated by applications spreading from thickness and surface measurements through antenna metrology and analyzing high density gradients in fluid mechanics to characterization of live objects in clinical diagnostics Novel functionalized materials used in dynamic or permanent holographic recording cover photopolymers photochromics photo thermo refractive glasses and hybrid organic inorganic media *Operator, Org.
