Taxonomy Of Flowering Plants:

Introduction to Taxonomy of Angiosperms Verma, Verma B. K., 2010-10 Taxonomy is one of the oldest biological disciplines. This book presents an account of general principles and aims of taxonomy in a comprehensive manner. It has been written mainly to cater the needs of undergraduate students pursuing courses in Botany Life Sciences Plant Sciences but it will be useful for postgraduate students of these disciplines as well. The book gives a critical account of the important systems of classification and salient features of the APG II Angiosperm Phylogeny Group 2003 system of plant taxonomy. It mentions the important rules of plant nomenclature and various codes of nomenclature including the latest Vienna Code of 2006. Further it discusses the usefulness of anatomy embryology palynology chemistry cytology and ecology under current trends in plant taxonomy. A thorough coverage of profusely illustrated 50 important dicotyledonous and monocotyledonous angiospermic families is the hallmark of this book. Each family is described covering the following points: Distribution, vegetative features, floral description, morphological nature of organs, further classification, affinities with other families, economic importance and description of common plants. Finally, the book covers the different aspects and theories related to the origin of angiosperms and elucidates the methods and techniques of herbarium development and maintenance.

KEY FEATURES Presents a key to families described in the book. Provides a pro forma for the description of angiosperms. Includes a glossary of important technical terms. Lists the important Herbaria of India and the world.

Flowering Plants Bharati Bhattacharyya, B. M. Johri, 1998 This text provides comprehensive data on geographical distribution, vegetative and floral morphology, anatomy, embryology, chromosome number, chemical features and important genera and economic importance of 134 families of the dicots and monocots.

Taxonomy of Angiosperms A. V. S. S. Sambamurty, 2013-12-30 Taxonomy of Angiosperms is designed for B Sc H and M Sc students of Botany in various universities. The book is divided into two parts. Part I deals with the Principles of Angiosperm Taxonomy and Part II deals with families. The book is amply illustrated with examples. Some of the important chapters in Part I comprise Different Classifications, Nomenclature, Biosystematics, Modern Trends in Taxonomy, Chemotaxonomy, Numerical Taxonomy etc. Part II deals with about 214 families of which 55 are discussed in detail and summarized accounts of the rest are given for advanced students. The book also comes loaded with numerous appendices like comparison of classifications, floral diagrams and floral formulae, questions etc. The book will cater to the needs of Botany students pursuing B Sc H M Sc and related fields like Medical Botany, Pharmacy, Agricultural Botany and Horticulture.

Taxonomy of Angiosperms R. Nair, 2010

Diversity and Classification of Flowering Plants Armen Leonovich Takhtadzhian, 1997 The culmination of more than fifty years of research by the foremost living expert on plant classification. Diversity and Classification of Flowering Plants is an important contribution to the field of plant taxonomy. In the last decade the system of classifying plants has been thoroughly revised. Instead of describing every individual family, Takhtajan includes descriptions in keys to families which he calls descriptive keys. The advantage of descriptive keys is that

they give both the characteristic features of the families and their differences The delimitation of families and orders drastically differs from the one accepted by the Englerian school and from the one accepted in Arthur Cronquist's system Takhtajan favors the smaller more natural families and orders which are more coherent and better defined where characters are easily grasped and which are more suitable for information retrieval and phylogenetic studies including cladistic analysis because it reduces polymorphic codings
