S. Moreira, E. Jeroen Huising, David E. Bignell, 2012-05-04 This practical handbook describes sampling and laboratory assessment methods for the biodiversity of a number of key functional groups of soil organisms including insects earthworms nematodes fungi and bacteria The methods have been assembled and the protocols drafted by a number of scientists associated with the UNEP GEF funded Conservation and Sustainable Management of Below Ground Biodiversity Project executed by the Tropical Soil Biology and Fertility TSBF Institute of the International Center for Tropical Agriculture CIAT The methods provide a standardized basis for characterizing soil biodiversity and current land uses in terrestrial natural semi natural and agroecosystems in tropical forests and at forest margins The aim is to assess soil biodiversity against current and historic land use practices both at plot and landscape scales and further to identify opportunities for improved sustainable land management through the introduction management or remediation of soil biota thus reducing the need for external inputs such as fertilizers and pesticides The book also contains extensive advice on the handling of specimens and the allocation of
