

If the invention at this stage shows sufficient commercial potential to warrant further development (and resources for development are available) (5.4), an external patent lawyer (see [TDC Policy & Resource Summary](#)) with the appropriate domain expertise should be contacted to draft and file a provisional patent application under trademark (see also [TDC Policy](#)) (5.5). Assessment of the IP should be done according to the existing TDC Policy ([TDC Policy](#)). The technical report received from the Research Delivery [institutions](#) should be [aligned](#) for drafting of patent. If additional information is required FPOs should be consulted.

5.4 & 5.5 & 5.6

If the TTAC decided that further technology development in the prototype stage is required, the process commences to the development of a value case (5.7). The value case should be developed by the TTAC by integrating all the [Value Case Template](#), and the TTAC should also be involved in complex cases e.g. whether market analysis is required taking into account technology is already developed to address a market need. The purpose of the value case is to obtain an overview of the opportunity, context, strategy, IP management, resources, funding required, and commercialisation potential. In developing the value case, the TTAC should make use of the [TDC Policy & Resource Summary](#) in order to determine the potential key partners (KPs) and the resource partners that may be required.

5.7

Once the value case has been developed and provided to the TTAC, the TTAC need to decide (5.8) whether technology development should proceed to the prototype phase with identified KPs and resources or should be revised (5.8) or be discontinued. The assessment by the TTAC should be done by using the [Value Case Template](#).

Nonanticoagulant Actions of Glycosaminoglycans B. Casu, J. Harenberg, 2012-12-06 Prophylaxis and treatment of thromboembolism have made one of the major impacts in medicine Heparin has widely been used as the most effective drug during the last 50 years However its potential side effects have led to the search for equally effective but safer alternatives At present the low molecular weight heparins are the most promising steps in this direction Considerable interest has been generated at the same time in exploring other glycosaminoglycans of the nonheparin type for therapeutic use The existence of these compounds has been known for a long time and substantial information has been gathered on glycosaminoglycans such as heparinsulfate dermatansulfate and chondroitinsulfate Many of these substances are derived from animal or plant sources and some of them have now been synthesized The aim of the Fourth Symposium on Glycosaminoglycan Research at

Villa Vigoni in Lovenjo at Lake Como Italy was to summarize the considerable new information in this field The articles of the present volume are mainly based on a German Italian collaboration supported by the Vigoni Program The selected articles describe many different nonheparin glycosaminoglycans some of them already in clinical trials as antithrombotic agents In particular the interaction of glycosaminoglycans with some cellular elements of blood especially leukocytes and platelets are discussed New methods for their identification and assays are described and considerable emphasis is placed on the pharmacokinetic aspects of these new compounds Particularly some nonanticoagulant activities of the glycosaminoglycans are discussed in detail
