Breaking into the Curriculum John F. Schostak, 2020-03-13 Information technology is here to stay Its impact has already been far reaching in business in communications and in leisure activities it has been responsible for replacing human action by that of machines As such it raised questions about freedom and the meaning of work and human activity which could no longer be ignored by those working in education The educational response to information technology must ensure that human activities are enhanced rather than enslaved by computers Originally published in 1988 Breaking into the Curriculum provides one such response A range of curricular structures and teacher roles are examined for their potential for preserving freedom in a future that was already being formed and informed by electronic systems Drawing on case studies of pupils and teachers from throughout their school career the authors of this collection sought to provoke discussion on the true ends of education and the kinds of strategies that would best realise those ends Information technology it is argued is already shaping our thinking concerning the schooling of children As such it can either create an

electronically controlled environment or it can provide the stimulus for imaginative playful and creative thought and the development of intelligence in its broadest sense The choice is ours the authors of this collection seek to inform that choice Today it can be read in its historical context Issues in Training Teachers to Use Microcomputers in the Classroom Robert D. Hess,Irene T. Miura,1984 **Case Studies of Microcomputers in the Classroom** John Olson,Sandra Eaton,1986 Teachers participating in a 12 month study investigating teacher response to computer innovation in the classroom reported several factors as influential in determining how computers are incorporated into classroom routines the support they received private and public expectations for the teacher and the school ministry and board guidelines and the rather unique process of innovation in which the teachers themselves were involved Working with grades 4 to 10 in eight schools case studies were compiled that document in detail both how and why individual teachers use computers Although the schools chosen offered a wide range of computer applications e g using the computer for graphics for geographical simulations for special education for French immersion and for core French the studies fell into two distinct groups computers as part of a literacy program and use of computers as a teaching tool These two patterns of use differed in goals learning potential demands on the teacher pedagogy and curriculum implications Of the two computer literacy was the most problematic because of its newness and uncertain status as a subject DJR *An Apple for the Teacher* Melissa Evans-Andris,1996-06-24 Take a look at the use of computers in classrooms from the teacher s perspective Explore the best and worst ways to use computers in the classroom Evans Andris gives you models of the three basic computer use styles teachers adopt She helps you identify the ways your teachers use computers in their classrooms and shows how to support their best efforts to incorporate computers into teaching and learning Find out how you can encourage teachers to use this new tool to enhance their teaching abilities help augment their knowledge base and boost their careers Evans Andris offers a thorough systematic examination of how teachers react and how teaching and learning change when computers come into the classroom She recommends strategies to help you Motivate your teachers to incorporate technology into their curriculum Improve students learning and performance Shift responsibilities to computer coordinators Support your teachers efforts to use computers creatively and constructively Guide your staff through the tricky changes that result from bringing in technology You ll learn how to focus teachers efforts on integrating technology into their classes manage your computer coordinator and get everyone to work toward your shared goal of making technology count Let the crucial information in this book help you lead your staff and students into the 21st century of learning **Computer-based Education** ,1987 *Learning with Computers* Ken Ryba,Bill Anderson,1990 Grade level 4 5 6 7 8 9 e i s t *Resources in Education* ,1998-05 Instructor's Manual for Teachers, Computers, and Curriculum Paul G. Geisert,Mynga K. Futrell,1990-04-01 *Computer-Based Education in the Social Studies* Lee Ehman,Allen D. Glenn,1987 Computers have not revolutionized social studies curricula because so few teachers use them But research does indicate that computers are flexible instructional tools that can assist in

the development of attitudes intellectual motivation and inquiry skills Social studies educators need to consider expanded computer use in their classrooms because computers assist in the preparation of students for effective participation in society Teachers must understand how technology affects instruction learning and classroom environments along with the types of effective instructional strategies that can be used to achieve specific goals Educators should acquire the knowledge and experience needed to use computers by reviewing research relating to computer use in teaching and to instructional strategies Information on research concerning the impact of computers on students how computers change the way teachers work computers effect on the training process and computers influence on the social studies curriculum is included Necessary teacher competencies and appropriate instructional uses are explored through an analysis of teacher utility programs databases data analysis programs and simulations A 76 item bibliography concludes the document JHP
