The Organ Donor Experience Katrina A. Bramstedt, Rena Down, 2011-11-16 With a current US need of over 115 000 organs one would think that Good Samaritan donors would be welcomed with open arms by transplant centers and society in general however this is often not the case Tell someone that you have donated an organ to a stranger and the reaction is likely to be one of astonishment and disbelief Some doctors even consider people who offer their organs to strangers crazy Why would anyone do that Who are these people so committed to helping others strangers that they would undergo surgery discomfort and disruption of their lives This book profiles donors who have offered their organs to strangers and helps readers understand the meanings behind their donations For the donor altruism should always be the primary motivation though other motivations often come into play Often there are also subconscious reasons for performing this great act of kindness *The Organ Donor Experience* gives living anonymous organ donors of kidneys liver lobes and lung lobes the opportunity to tell their stories as they understand them and for others to understand the motivations and the meaning of true altruism

Organ Donation Corona Brezina,2009-08-15 Medical advances have made organ donation and organ transplant more important than ever with the potential to save thousands of lives every year This book discusses issues related to organ donation donor registration transplant surgery and living with a donated organ It also takes a close look at the practical legal and ethical aspects of modern organ donation

The Organ Shortage Crisis in America Andrew Michael Flescher,2018-03-01 Nearly 120 000 people are in need of healthy organs in the United States Every ten minutes a new name is added to the list while on average twenty people die each day waiting for an organ to become available Worse our traditional reliance on cadaveric organ donation is becoming increasingly insufficient and in recent years there has been a decline in the number of living donors as well as in the percentage of living donors relative to overall kidney donors Some transplant surgeons and policy advocates have responded to this shortage by arguing for the legalization of the sale of organs among living donors Andrew Flescher objects to this approach by going beyond concerns traditionally cited about social justice commodification and patient safety and moving squarely onto the terrain of discussing what motivates major and costly acts of human selflessness What is the most efficacious means of attracting prospective living kidney donors Flescher drawing on literature in the fields of moral psychology and economics as well as on scores of interviews with living donors suggests that inculcating a sense of altruism and civic duty is a more effective means of increasing donor participation than the resort to financial incentives He encourages individuals to spend time with patients on dialysis in order to become

acquainted with their plight and as an alternative to lump sum payments consider innovative solutions that positively impact living donor participation that do not undermine the spirit of the National Organ Transplant Act of 1984 This book not only re-examines the important debate over whether to allow the sale of organs it is also the first volume in the field to take a close look at alternative solutions to the organ shortage crisis

The Political Economy of Organ Transplantation Hagai Boas, 2022-09-09 This thought provoking work examines how the relationships of organs tissues and cells transferred from one body to another through donation sale or gift are mediated by the state market and family The book is a thorough review of the sociological anthropological and ethical literature surrounding transplant organs but encased within the author's own personal dilemmas and lived experience His work skillfully underscores the negotiations and accommodations inherent in the use of these technologies and reveals the situatedness of decisions that belie any simplistic readings of the ethics of transplantations This is a stimulating and accessible book for those with an interest in transplantation ethics or the social implications of medical technologies Its strength lies in the reflexive accounts from the author of his own experience juxtaposed with the sensitive appraisals of the workings of the state market and family in the organ economy Andrea Whittaker Monash University reviewed for Social Forces This innovative work combines a rigorous academic analysis of the political economy of organ supply for transplantation with autobiographical narratives that illuminate the complex experience of being an organ recipient Organs for transplantations come from two sources living or post mortem organ donations These sources set different routes of movement from one body to another Postmortem organ donations are mainly sourced and allocated by state agencies while living organ donations are the result of informal relations between donor and recipient Each route traverses different social institutions determines discrete interaction between donor and recipient and is charged with moral meanings that can be competing and contrasting The political economy of organs for transplants is the gamut of these routes and their interconnections and this book suggests how such a political economy looks like what are its features and contours its negotiation of the roles of the state market and the family in procuring organs for transplantations and its ultimate moral justifications Drawing on Boas personal experiences of waiting searching and obtaining organs each autobiographical section of the book sheds light on a different aspect of the discussed political economy of organs post mortem donations parental donation and organ market and illustrates the experience of living with the fear of rejection and the intimidation of chronic shortage A Political Economy of Organ Transplantation is of interest to students and academics with an interest in bioethics sociology of health and illness medical anthropology and science and technology studies

The Gift of Life Traci Graf, 2014-06-02 Organ transplants are a very controversial and unique area of medicine Those of us who work as Transplant Coordinators were frequently referred to by hospital staff as organ vultures behind our backs but also many times within earshot I felt this reference to extremely ugly birds was unfair and short sighted I did say once in a while to a difficult staff person if your kid needed a transplant wouldn't you hope that someone was out there being as ethically aggressive about finding an organ as they can That usually shut them up quickly from the Foreword One of the miracles of modern medicine is the ability of surgeons to transplant organs Often it's the only way to save the life of a person whose own kidneys lungs liver or heart are failing But with barely 2 percent of critically ill patients suitable for organ donation the demand far exceeds the number of organs that become available The Gift of Life is about the remarkable world of organ transplant coordinators profiles of the men and women who locate and arrange for the donation of organs from those who are dying and wish to live on in others bodies through this selfless gift Traci Graf tells the riveting story of this unique and demanding branch of medicine Transplant coordinators review the medical files and charts on all patients whose condition is so severe that they are not expected to live Their task is to convince the patient or the patient's family to allow organs to be donated immediately upon death The transplant coordinator works to save lives by finding and obtaining consent for as many organ donations as possible In *The Gift of Life* transplant coordinator Traci Graf recounts the stress drama and joy of working long hours dealing with emotionally distraught family members and overworked medical staff and the emotional toll of a job that means the difference between life and death for the recipients Packed with riveting first person narrative *The Gift of Life* will appeal to anyone interested in modern medical practice and the lives and challenges

faced by nurses and doctors who work to offer critically ill patients the gift of life thanks to donors foresight and generosity
