Animal Ethics Bob Fischer, 2019-12-06 There isn't one conversation about animal ethics. Instead, there are several important ones that are scattered across many disciplines. This volume both surveys the field of animal ethics and draws professional philosophers, graduate students, and undergraduates more deeply into the discussions that are happening outside of philosophy departments. To that end, the volume contains more nonphilosophers than philosophers, explicitly inviting scholars from other fields such as animal science, ecology, economics, psychology, law, environmental science, and applied biology, among others, to bring their own disciplinary resources to bear on matters that affect animals. The Routledge Handbook of Animal Ethics is composed of 44 chapters, all appearing in print here for the first time, and organized into the following six sections: I Thinking About Animals, II Animal Agriculture and Hunting, III Animal Research and Genetic Engineering, IV Companion Animals, V Wild Animals, Conservation, Management, and Ethics, VI Animal Activism. The chapters are brief, and they have been written in a way that is accessible to serious undergraduate students regardless of their field of study. The volume covers everything from animal cognition to the state of current fisheries, from genetic modification to intersectional animal activism. It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals. *Our Dumb Animals*, 1909

Dev, 2016-09-01 Urban wildlife management is a town planning subject. It is logical and important to relate the animal and human conflict seen all over the world as a phenomenon which is applicable to all types of human settlements despite the diversities and complexities of cultures, societal structures, laws, value systems, religions, and so on. A universal principle or theory governs and applies to all cities which define these conditions and phenomena, creating the conflict or coexistence. This book investigates the niches of one of the key urban animals from a syntactic, semantic, and pragmatic perspective and explores how these niches are naturally synonymous to similar patterns, structures, and compositions within human settlements. It explores and defines the demographic patterns, thresholds, and phenomenon which leads to formation of the different levels and extremes of interaction between the species. This forms a paradigm which classifies this conflict within the various disciplines and frameworks of urban ecology. The focus is primarily on urban dogs, it being a keystone species, but is later related with other urban animals as well. The premise for this approach is that history has shown how certain species have persuasively coexisted with humans for so many millennia, yet a conflict happens between animals and humans and within humans over animals. It is thus logical to believe that the forces which create this conflict cannot solely be natural to the species in question and have to come from outside from the settlement patterns of both species and the net resultant force and dynamics. The book looks at these dichotomies in four distinct but interrelated ways. It delves deep inside four niches which form the dynamics of any settlement: spatial, cultural, ecological, and economic, and explores all scales at which

the succession and evolution of animals take place in highly urbanized settlements

The Internet of Animals Deborah Lupton, 2023-03-07 The internet is made of cats is a half jokingly made claim Today animals of all shapes and sizes inhabit our digital spaces including companion animals wildlife feral animals and livestock In this book Deborah Lupton explores how digital technologies and datafication are changing our relationships with other animals Playfully building on the concept of The Internet of Things she discusses the complex feelings that have developed between people and animals through the use of digital devices from social media to employing animal like robots as companions and carers The book brings together a range of perspectives including those of sociology cultural geography environmental humanities critical animal studies and internet studies to consider how these new digital technologies are contributing to major changes in human animal relationships at both the micropolitical and macropolitical levels As Lupton shows while digital devices and media have strengthened people's relationships to other creatures these technologies can also objectify animals as things for human entertainment therapy or economic exploitation This original and engaging book will be of interest to scholars and students across the social sciences and humanities

The

end of animal life: a start for ethical debate Franck L.B. Meijboom, Elsbeth N. Stassen, 2023-08-07 Killing animals is common practice yet it is not morally neutral. The end of animal life is related to many societal and ethical questions and concerns. Questions such as how long should we continue to treat an animal before putting it down. But also the question whether it could be legitimate to kill individual animals for the welfare of the herd or of future generations. The ongoing public and academic discussions on these and on other well known questions like those related to the killing of animals for food or for scientific purposes show that there is no one standard evaluation of animal life. This book is an edited volume that enables the reader to get a grip on that plurality of views with regard to animals. It helps to deal with the many questions related to the end of animal life. The chapters show how the plurality of views on killing animals is related to moral presuppositions by providing a clear overview of the ethical views on end of life decisions. Furthermore, the book contains a number of applied studies of the ethical questions related to killing animals in various practices including small animal practice, wildlife management, fishing and fish farming, animal experimentation and livestock farming. These chapters can help veterinarians, scientists, students, policy makers and many other professionals working with animals to easily get a good overview of the issues at stake and may contribute to responsible decision making with regard to the end of animal life. The Culture of Animals in Antiquity Sian Lewis, Lloyd Llewellyn-Jones, 2018-01-09 The Culture of Animals in Antiquity provides students and researchers with well chosen and clearly presented ancient sources in translation, some well known, others undoubtedly unfamiliar but all central to a key area of study in ancient history: the part played by animals in the cultures of the ancient Mediterranean. It brings new ideas to bear on the wealth of evidence, literary, historical and archaeological, which we possess for the experiences and roles of animals in the ancient world. Offering a broad picture of ancient cultures in the Mediterranean as part of a wider ecosystem, the volume is on an ambitious scale. It covers a broad span of time from the sacred animals of dynastic Egypt to the imagery of the lamb in early Christianity and of the region from the fallow deer introduced and bred in Roman Britain to the Asiatic lioness and her cubs brought as a gift by the Elamites to the Great King of Persia. This sourcebook is essential for anyone wishing to understand the role of animals in the ancient world and support learning for one of the fastest growing disciplines in Classics.

The Routledge History of Death since 1800 Peter N. Stearns, 2020-10-13 The Routledge History of Death Since 1800 looks at how death has been treated and dealt with in modern history: the history of the past 250 years in a global context through a mix of definite, often quantifiable changes and a complex qualitative assessment of the subject. The book is divided into three parts, with the first considering major trends in death history and identifying widespread patterns of change and continuity in the material and cultural features of death since 1800. The second part turns to specifically regional experiences and the third offers more specialized

chapters on key topics in the modern history of death Historical findings and debates feed directly into a current and prospective assessment of death as many societies transition into patterns of ageing that will further alter the death experience and challenge modern reactions Thus a final chapter probes this topic by way of introducing the links between historical experience and current trajectories ensuring that the book gives the reader a framework for assessing the ongoing process as well as an understanding of the past Global in focus and linking death to a variety of major developments in modern global history the volume is ideal for all those interested in the multifaceted history of how death is dealt with in different societies over time and who want access to the rich and growing historiography on the subject Chapter 1 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
