The Official Red Dwarf Companion:

A Year of the Stars Fred Schaaf, 2010-08-25 The ideal book for amateur astronomers this title takes readers on a journey of discovery through the seasons of the starry night sky Illustrations The Search for Extraterrestrial Life: Recent Developments M.D. Papagiannis, 2012-12-06 PROCEEDINGS IAU S 1 WOSIUM 112 Michael D Papagiannis Department of Astronomy Boston University Boston Massachusetts 02215 USA 1 THE SYMPOSIUM AND THE PROCEEDINGS IAU Symposium 112 The Search for Extraterrestrial Life Recent Developments was held in Boston and in particular at the new Science Center of Boston University June 18 21 1984 and was attended by about 150 participants from 18 different countries It was the first official scientific meeting organized by IAU Commission 51 the youngest of all IAU Commissions which was established only in 1982 at the 18 th IAU General Assembly at Patras Greece This Volume of the Proceedings contains nearly 70 papers with about 90 authors from 20 different countries including two papers from our Soviet colleagues Kardashev and Slysh who had not been able to attend our Symposium in Boston The Volume is divided into eight Sections the first of which serves as a general introduction and the other seven correspond to the seven Sessions of the Symposium **Highly Evolved Close Binary Stars** Anatolii Mikhaïlovich Cherepashchuk, 1996 **Astrophysics from Spacelab** P.L. Bernacca, Remo Ruffini, 2012-12-06 A meeting on Astrophysics from Spacelab was held at the International Centre for Theoretical Physics Trieste in the Autumn of 1976 Scope of the meeting was to bring to the attention of an increasing number of physicists and astrophysicists including scientists from developing countries the new facilities made available by the combination of the Shuttle and the Spacelab programmes This book starts from that meeting and includes together with reports presented in Trieste duly updated a few additional reviews on selected topics In the first part D J Shapland and G Giampalmo describe the Shuttle and the Spacelab present the design and the programmatic data of these advanced transportation systems and orbital laboratories Vittorio Manno introduces the scientific programmes coordinated and led to execution by the European Space Agency ESA Programmes in Astronomy and Astrophysics J D Rosendhal describes the NASA Programmes in Astronomy and Astrophysics summarizes the activities in solar physics high energy astrophysics and astronomy planned in the United States of America by the National Aeronautics and Space Administration as well as the expected use of the space shuttle and spacelab in their first year of operation Literature 1997, Part 1 Astronomisches Rechen-Institut ARI, 2013-11-11 Astronomy and Astrophysics Abstracts is devoted to the recording summarizing and indexing of astronomical publications throughout the world Two volumes are scheduled to appear per year Volume 67 records 10 903 papers covering besides the classical fields of astronomy and astrophysics such matters as space flights related to astronomy lunar and planetary probes and satellites meteorites and interplanetary matter X rays and cosmic rays quasars and pulsars The abstracts are classified under more than one hundred subject categories thus permitting quick surveying of the bulk of material published on the same topic within six months For instance this volume records 119 papers on minor planets 155 papers on supernovae and

554 papers on cosmology *Dark Companions of Stars* P. Kamp, 2012-12-06 If you want to understand the invisible look careful at the visible The Talmud A bird s eye or rather a distant spacecraft s view of the solar system reveals an assembly of planets terrestrial giant and Pluto The orbital motions are in the same sense counter clockwise as seen from the north of the general flattened space within which the planetary motions are confined This state of affairs is corevolving and more or less coplanar The rotations are in the same sense as the revolutions with the strikiig exception of Uranus whose sense of rotation is perpendicular to its plane of revolution As time goes by most of the planets remain fairly close to a general plane and at no time stray unduly far from it they remain confined within a rather narrow box or disk with a large equatorial extent The most distant planet Pluto requires a diameter of some 80 astronomical units for the disk One astronomical unit is the distance of the Earth to the Sun to be more precise the length of half the major axis of the Earth s slightly elliptical orbit around the Sun and amounts to nearly 149600000 km **Planets Outside the Solar System: Theory and Observations** Jean-Marie Mariotti, D.M. Alloin, 2012-12-06 The question of the existence of other worlds and other living beings has been present in the human quest for knowledge since as far as Epicurus For centuries this question belonged to the fields of philosophy and theology The theoretical problem of the formation of the Solar System and hence of other planetary systems was tackled only during the 18th century while the first observational attempts for a detection started less than one hundred years ago Direct observation of an extra solar planetary system is an extraordinarily difficult problem extra solar planets are at huge distances are incredibly faint and are overwhelmed by the bright light of their own stars With virtually no observational insight to test their models theoreticians have remained for decades in a difficult position to make substantial progress Yet the field of stellar formation has provided since the 1980s both the the oretical and observational evidences for the formation of discs at the stage of star birth and for debris materials orbiting the very young stellar systems It was tempting to consider that these left overs might indeed later agglomerate into planetary systems more or less similar to ours Then came observational evidences for planets outside the Solar System *Can Star Systems Be Explored?: The Physics Of Star Probes* Lawrence Barr Crowell, 2007-11-22 This book is an exposition of classical mechanics and relativity that addresses the question of whether it is possible to send probes to extrasolar systems It examines largely well understood physics to consider the possibility of exploring the nearby interstellar environment in a similar fashion to how the solar system has been explored As such this book is both a semipopularization of basic physics and an informal study of a likely future technological development An auxilliary text on basic physics for students and laypersons as well as an illustration of the problems with interstellar exploration this book is a must read **The Facts on File Dictionary of Astronomy** John Daintith, William Gould, 2009 Presents an illustrated dictionary with 3 700 of the most frequently used terms in the field of astronomy **The Star Book** Peter Grego, 2012-10-01 Stargazing Throughout the Seasons in the Southern Hemisphere is an excerpt from The Star Book that guides you through the night skies in the Southern Hemisphere through wide angle star charts Looking at the

main constellations stars and celestial showpieces of the southern celestial sphere beginning with constellations around the south celestial pole and then taking a season by season view Far southern stars had to wait until the early 17th century to be mapped by European explorers Everyone is interested in the stars and on a clear night astonished by them Stargazing Throughout the Seasons in the Southern Hemisphere will answer any questions you may have when you look up into the night sky

The Stars at War II David Weber, Steve White, 2005-07 The Arachnids have overrun planet after planet As the aliens create a plan to keep the remaining colonial upstarts in their place residents of the Fringe Worlds have only one answer insurrection

The Shiva Option David Weber, Steve White, 2002-02-01 DEFEAT WAS NOT AN OPTION The war wasn't going well The mind numbingly alien Arachnids were an enemy whose like no civilized race had ever confronted Like some carnivorous cancer the Bugs had overrun planet after planet and they regarded any competing sentient species as only one more protein source They couldn't be reasoned with or even talked to because no one had the least idea of how to communicate with a telepathic species with no recognizable language and whose response to any communication attempt was a missile salvo No one knew how large their civilization if it could be called a civilization actually was or how it was organized but the huge fleets they threw against their opponents suggested that it was enormous The Grand Alliance of Humans Orions Ophiuchi and Gorm united in desperate self defense have been driven to the wall Billions of their civilians have been slaughtered Their most powerful offensive operation has ended in shattering defeat and the deaths of their most experienced and revered military commanders The edge in technology with which they began the war is eroding out from under them and whatever they do the Bugs just keep coming But the warriors of the Grand Alliance know what stands behind them and they will surrender no more civilians to the oncoming juggernaut They will die first and they will also reactivate General Directive 18 however horrible it may be Because when the only possible outcomes are victory or racial extermination only one option is acceptable The Shiva Option At the publisher's request this title is sold without DRM Digital Rights Management

Astrophysics in the Extreme Ultraviolet Stuart Bowyer, Roger F. Malina, 2012-12-06 From the beginning of Space Astronomy the Extreme Ultraviolet band of the spectrum roughly defined as the decade in energy from 90-900 was deemed to be the unobservable ultraviolet Pioneering results from an EUV telescope on the Apollo Soyuz Mission in 1975 forcibly demonstrated that this view was incorrect but it required the all sky surveys of the English Wide Field Camera and the Extreme Ultraviolet Explorer to demonstrate the broad potential of this field Over 700 EUV sources have now been detected Over 150 researchers from 16 countries gathered to share results in this new field at the International Astronomical Union Colloquium No 152 Papers were presented on a wide variety of topics including cool star coronae white dwarf atmospheres and evolution neutron stars the Io torus cataclysmic variable stars active galactic nuclei the interstellar medium winds and atmospheres of early type stars and EUV plasma diagnostics Selected manuscripts from this meeting are provided in these Conference Proceedings

The Lost Era: The Buried Age Christopher L.

Bennett,2007-06-26 The mysterious missing years of Captain Picard s life before he commanded the Enterprise are revealed at last in this Star Trek The Next Generation novel Jean Luc Picard His name has gone down in legend as the captain of the U S S Stargazer and two starships Enterprise But the nine years of his life leading up to the inaugural mission of the U S S Enterprise to Farpoint Station have remained a mystery until now as Picard s lost era is finally unearthed Following the loss of the Stargazer and the brutal court martial that resulted Picard no longer sees a future for himself in Starfleet Turning to his other love archaeology he embarks on a quest to rediscover a buried age of ancient galactic history and awakens a living survivor of that era a striking mysterious woman frozen in time since before the rise of Earth s dinosaurs But this powerful immortal has a secret of cataclysmic proportions and her plans will take Picard aided along the way by a brilliant but naive android an insightful Betazoid and an enigmatic El Aurian to the heights of passion the depths of betrayal and the farthest reaches of explored space **Literature 1984, Part 1** S. Böhme,Prof. Dr. Walter Fricke,H. Hefe,Inge Heinrich,W.

Hofmann,D. Krahn,V. R. Matas,Dr. Lutz D. Schmadel,G. Zech,2013-11-11 Literature 1980, Part 1 Siegfried Böhme,Ute Esser,Professor Dr. Walter Fricke,Inge Heinrich,Wilfried Hofmann,Dietlinde Krahn,Dorothea Rosa,Dr. Lutz D. Schmadel,Gert Zech,2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user I 1980 some older Volume 27 contains literature published in 1980 and received before August literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bouska Prague who surveyed journals and publications in Czech and supplied us with abstracts in English New Light on Dark Stars Neill I. Reid,Suzanne L. Hawley,2013-11-27 Perhaps the most common question that a child asks when he or she sees the night sky from a dark site for the first time is How many stars are there This happens to be a question which has exercised the intellectual skills of many astronomers over the course of most of the last century including for the last two decades one of the authors of this text Until recently the most accurate answer was We are not certain but there is a good chance that almost all of them are M dwarfs Within the last three years results from new sky surveys particularly the first deep surveys at near infrared wavelengths have provided a breakthrough in this subject solidifying our census of the lowest mass stars and identifying large numbers of the hitherto almost mythical substellar mass brown dwarfs These extremely low luminosity objects are the central subjects of this book and the subtitle should be

interpreted accordingly The expression low mass stars carries a wide range of meanings in the astronomical literature but is most frequently taken to refer to objects with masses comparable with that of the Sun F and G dwarfs and their red giant descendants While this definition is eminently reasonable for the average extragalactic astronomer our discussion centres on M dwarfs with masses of no more than 60% that of the Sun and extends to failed stars objects with insufficient mass to ignite central hydrogen fusion

X-Ray Astronomy in the Exosat Era A. Peacock, 2012-12-06 Algol is a triple system containing a 70 hr eclipsing binary K IV and B8 V in a 694 day orbit with an A V star The X ray emission from this system Schnopper et al 1976 is thought to be associated with a corona surrounding the lobe filling and synchronously rotating K IV star This is based on the similarity of the X ray spectrum and luminosity of this system to that of the RS CVn binaries which also contain K sub giants with similar rotation periods and the fact that the luminosity of any coronae surrounding the B8 V and AV companion stars should not be enhanced by rapid rotation Pallavicini et al 1980 White et al 1980 The Einstein SSS measurement showed the X ray spectrum to be two component with 6.7 temperatures of 7.10 K and 3.10 K White et al 1980 As discussed by Swank et al 1981 the problem in understanding stellar coronae in general is how to scale up the solar model to account for the enhanced luminosities The close to 90° inclination and similar sizes for the Band K stars of 3.6 and 3.8 R₀ respectively make Algol an ideal candidate for an X ray eclipse measurement wherein the size of the X ray emitting coronal structures can be directly measured In this paper we report a continuous observation through the secondary eclipse of Algol using the EXOSAT Observatory 2

Weird Astronomical Theories of the Solar System and Beyond David Seargent, 2015-12-26 After addressing strange cosmological hypotheses in *Weird Universe* David Seargent tackles the no less bizarre theories closer to home Alternate views on the Solar System's formation comet composition and the evolution of life on Earth are only some of the topics he addresses in this new work Although these ideas exist on the fringe of mainstream astronomy they can still shed light on the origins of life and the evolution of the planets Continuing the author's series of books popularizing strange astronomy facts and knowledge *Weird Astronomical Theories* presents an approachable exploration of the still mysterious questions about the origin of comets the pattern of mass extinctions on Earth and more The alternative theories discussed here do not come from untrained amateurs The scientists whose work is covered includes the mid 20th century Russian S. K. Vsekhsvyatskii cosmologist Max Tegmark British astronomer Victor Clube and William Napier and American Tom Van Flandern a specialist in celestial mechanics who held a variety of unusual beliefs about the possibility of intelligent life having come from elsewhere Despite being outliers their work reveals how much astronomical understanding is still evolving Unconventional approaches have also pushed our scientific understanding for the better as with R. W. Mandl's approaching Einstein with regard to gravitational lensing Even without full substantiation and some theories are hardly credible their hypotheses allow for a new perspective on how the Solar System became what it is today
