Sleeping With Cats:

Sleeping with Cats Marge Piercy, 1986 **Let Sleeping Cats Lie - Pet Poems** Brian Bilston, 2024-09-26 A hilarious collection of pet poems by wordplay wizard Brian Bilston When you've got a bad case of the mews and are in desperate need of a pup lifting read this book is the ultimate mutt remedy Please don't think me lazy I'm not trying to slack it's just that I'm stuck you see under this cat This collection of poems focuses on the hilarious happenings in the lives of our furry and not so furry friends Stars include Wilf the hypnotist Labracadabrador a philosophically inclined goldfish penning a profound haiku a hen named Barbara receiving an adoring tribute and an octopussy cat that seems to have all its paws in plenty of odd little pies The perfect gift for a dog person cat person and every pet lover in between

Systemic Homeostasis and Poikilostasis in Sleep Pier Luigi Parmeggiani, 2011 This book aims at presenting biologists and clinicians with a compact description of the physiological manifestations of sleep that are significant from the viewpoint of the principle of homeostasis In the jargon of the physiological literature the word homeostasis introduced by W B Cannon 1926 refers to the existence of a constant state of extracellular body fluids with regard to their physical and chemical properties Since normal cell function depends on the constancy of such fluids in multicellular animals there are many regulatory mechanisms under the control of the central nervous system that act to maintain the constancy of the internal environment The experimental study of homeostasis in wakefulness already revealed the nature and complexity of the underlying physiological mechanisms Many of these regulatory mechanisms trigger compensatory changes according to the principle of negative feedback In contrast the control of homeostasis across sleep states is still an issue under debate concerning its physiological persistence and significance The author's aim is to find the specific mechanistic proofs of the actual consistency or inconsistency of the principle in different states of sleep In this respect there are several interacting physiological functions that ought to be examined across the sleep states The selection of the most significant experimental data is carried out with a view to present a simple but not simplistic approach to the issue The book brings forth the evidence that the systemic homeostatic regulation of many physiological variables underlying cellular life is not active in a particular state of the ultradian sleep cycle in mammals It also shows the theoretical and functional importance of the principle of homeostasis as a criterion of the systemic characterisation of the integrative control of physiological functions by the central nervous system during sleep in mammals
