Species Conservation And Management:

Wildlife Ecology, Conservation, and Management John M. Fryxell, Anthony R. E. Sinclair, Graeme Caughley, 2014-05-29 To understand modern principles of sustainable management and the conservation of wildlife species requires intimate knowledge about demography animal behavior and ecosystem dynamics With emphasis on practical application and quantitative skill development this book weaves together these disparate elements in a single coherent textbook for senior undergraduate and graduate students It reviews analytical techniques explaining the mathematical and statistical principles behind them and shows how these can be used to formulate realistic objectives within an ecological framework This third edition is comprehensive and up to date and includes Brand new chapters that disseminate rapidly developing topics in the field habitat use and selection habitat fragmentation movement and corridors population viability analysis the consequences of climate change and evolutionary responses to disturbance A thorough updating of all chapters to present important areas of wildlife research and management with recent developments and examples A new online study aid a wide variety of downloadable computer programs in the freeware packages R and Mathcad available through a companion website Worked examples enable readers to practice calculations explained in the text and to develop a solid understanding of key statistical procedures and population models commonly used in wildlife ecology and management The first half of the book provides a solid background in key ecological concepts The second half uses these concepts to develop a deeper understanding of the principles underlying wildlife management and conservation Global examples of real life management situations provide a broad perspective on the international problems of conservation and detailed case histories demonstrate concepts and quantitative analyses This third edition is also valuable to professional wildlife managers park rangers biological resource managers and those working in ecotourism

Wildlife Management and Conservation Paul R. Krausman, James W. Cain III, 2013-11-01 A definitive textbook for students of wildlife management Wildlife Management and Conservation presents a clear overview of the management and conservation of animals their habitats and how people influence both The relationship among these three components of wildlife management is explained in chapters written by leading experts and is designed to prepare wildlife students for careers in which they will be charged with maintaining healthy animal populations finding ways to restore depleted populations while reducing overabundant introduced or pest species and managing relationships among various human stakeholders Topics covered in this book include The definitions of wildlife and management Human dimensions of wildlife management Animal behavior Predator prey relationships Structured decision making Issues of scale in wildlife management Wildlife health Historical context of wildlife management and conservation Hunting and trapping Nongame species Nutrition ecology Water management Climate change Conservation planning

Species Conservation and Management H. Resit Akcakaya, Mark A. Burgman, Oskar Kindvall, Chris C. Wood, Per Sjögren-Gulve, Jeff S. Hatfield, Michael A. McCarthy, 2004-10-07 This edited volume is a collection of population and metapopulation models for a wide variety of species including plants invertebrates fishes amphibians reptiles birds and

mammals Each chapter of the book describes the application of RAMAS GIS 4.0 to one species with the aim of demonstrating how various life history characteristics of the species are incorporated into the model and how the results of the model have been or can be used in conservation and management of the species The book comes with a CD that includes a demo version of the program and the data files for each species

Species Conservation and Management H. R. Akçakaya, 2023 Offers a collection of population and metapopulation models for a variety of species Each chapter describes how various life history characteristics of the species are incorporated into the model and how the results are used in conservation and management This work includes a CD ROM with model files for each species

Conservation Management of Freshwater Habitats Neville C. Morgan, Peter S. Maitland, 2012-11-22 In this book the authors have applied research knowledge to the solution of practical problems facing wildlife conservation in freshwater habitats Subjects covered include evaluation of the conservation interest of sites practical protection and management of freshwater habitats species conservation

The Science of Conservation Planning Reed F. Noss, Michael O'Connell, Dennis D. Murphy, 1997-10 In The Science of Conservation Planning three of the nation's leading conservation biologists explore the role of the scientist in the planning process and present a framework and guidelines for applying science to regional habitat based conservation planning Chapters consider history and background of conservation planning efforts criticisms of science in conservation planning principles of conservation biology that apply to conservation planning detailed examination of conservation plans and specific recommendations for all parties involved The Science of Conservation Planning will serve as a model for the application of conservation biology to real life problems and can lead to the development of scientifically and politically sound plans that are likely to achieve their conservation goals even in cases where biological and ecological information is limited

Conservation Physiology Christine L. Madliger, Craig E. Franklin, Oliver P. Love, Steven J. Cooke, 2021 This novel textbook provides the first consolidated overview of the scope purpose and applications of conservation physiology with a focus on wildlife It outlines the major avenues and advances by which the field is contributing to the monitoring management and restoration of wild animal populations

Conservation of Wildlife Populations L. Scott Mills, 2009-03-12 Professor L. Scott Mills has been named a 2009 Guggenheim Fellow by the board of trustees of the John Simon Guggenheim Memorial Foundation Conservation of Wildlife Populations provides an accessible introduction to the most relevant concepts and principles for solving real world management problems in wildlife and conservation biology Bringing together insights from traditionally disparate disciplines the book shows how population biology addresses important questions involving the harvest monitoring and conservation of wildlife populations Covers the most up to date approaches for assessing factors that affect both population growth and interactions with other species including predation genetic changes harvest introduced species viability analysis and habitat loss and fragmentation Is an essential guide for undergraduates and postgraduate students of wildlife biology conservation biology ecology and environmental studies and an invaluable resource

for practising managers on how population biology can be applied to wildlife conservation and management. Artwork from the book is available to instructors online at <http://www.blackwellpublishing.com/mills>. An Instructor manual CD ROM for this title is available. Species Conservation Jamieson A. Copsey, Simon A. Black, Jim J. Groombridge, Carl G. Jones, 2018-06-28. This book brings together leading conservation practitioners to reflect on their response to the current global biodiversity crisis through the lens of island species recovery and management. Initial chapters cover the biological understanding of small population biology and the growing threat of invasive species while subsequent chapters discuss the management of these threats and the complexity of leading projects within a dynamic and still relatively unknown system. Multiple case studies from islands worldwide illustrate key points allowing readers to draw on the first hand practical experience of experienced professionals. This resource will be invaluable to both current and future conservation professionals helping them to go beyond disciplinary comfort zones and develop, manage and lead projects over extensive timeframes in a way that brings others with them on the journey.

Conservation of Rare or Little-Known Species Martin G. Raphael, Randy Molina, 2013-03-19. Some ecosystem management plans established by state and federal agencies have begun to shift their focus away from single species conservation to a broader goal of protecting a wide range of flora and fauna including species whose numbers are scarce or about which there is little scientific understanding. To date these efforts have proved extremely costly and complex to implement. Are there alternative approaches to protecting rare or little known species that can be more effective and less burdensome than current efforts? Conservation of Rare or Little Known Species represents the first comprehensive scientific evaluation of approaches and management options for protecting rare or little known terrestrial species. The book brings together leading ecologists, biologists, botanists, economists and sociologists to classify approaches, summarize their theoretical and conceptual foundations, evaluate their efficacy and review how each has been used. Contributors consider combinations of species and systems approaches for overall effectiveness in meeting conservation and ecosystem sustainability goals. They discuss the biological, legal, sociological, political, administrative and economic dimensions by which conservation strategies can be gauged in an effort to help managers determine which strategy or combination of strategies is most likely to meet their needs. Contributors also discuss practical considerations of implementing various strategies. Conservation of Rare or Little Known Species gives land managers access to a diverse literature and provides them with the basic information they need to select approaches that best suit their conservation objectives and ecological context. It is an important new work for anyone involved with developing land management or conservation plans.

Ecosystem Management Gary K. Meffe, 2002-10. This text aims to engage students in active problem solving using the detailed landscape scenarios that face the modern resource manager and scientist. It emphasizes the intricate ecological, socioeconomic and institutional matrix in which natural resource

Coastal Multi-species Conservation and Management Plan ,2014 **Fisheries Conservation and Management** Michael R. Ross,1997 Designed for beginning level readers who have not yet completed more technical coursework in math and science this book introduces the breadth of the fisheries conservation and management process rather than the depths and details of specific fisheries conservation and management settings It provides a broad background including basic information on fish their habitats and people who fish for them provides numerous examples of both successes and failures strengths and weaknesses of particular conservation or management strategies and programs See Chs 8 12 and focuses on the laws that govern the management process and management activities i e regulating harvest the use of hatcheries in fisheries management habitat related management and on the types of management and conservation activities that are used

Grazing and Conservation Management Michiel F. WallisDeVries,Jan Pieter Bakker,Jan Pouwel Bakker,S. E. van Wieren,1998 Grazing animals enjoy an ambiguous reputation in the field of nature conservation Livestock are often treated as a scourge yet native large herbivores form the prime attraction of many a reserve This book gives the first comprehensive overview of the use of grazing as a tool in conservation management Considering in turn the ecological and historical background the impact of grazing on community structure management applications and future prospects this book examines issues such as the role of herbivores as keystone species the assessment of habitat quality and the function of scientific models in advancing grazing management Large herbivores are shown to be potentially powerful allies in the management of nature reserves particularly in the maintenance enhancement or restoration of biodiversity Grazing and Conservation Management will appeal to conservation biologists and rangeland managers providing them with a clearer understanding of grazing and conservation management **Wildlife Conservation And Management** Dr. Singray Saleeb Kullu,Dr.

Reetu,Dr. Rakesh Kumar,Dr. Meena Das,2023-02-27 Understanding demographics animal behavior and the dynamics of ecosystems is necessary for applying modern ideas of sustainable wildlife management and conservation which include the protection of endangered species This creates a unified cohesive work that is geared for upper level undergraduates and graduate students by weaving together a variety of diverse themes This provides an introduction to important ecological concepts such as the values of animals the study and management of habitats demography and the development and control of populations Thereafter population dynamics are explored in depth along with the many forms of animal conservation and their methods The new quantitative procedures that have been developed over the course of the previous ten years are now considered to be so vital to management that we have incorporated them at the most fundamental levels In addition the book has a few chapters that will be helpful to practical wildlife management learners and those working in the area generally This book discusses contemporary approaches to census the use of age and stage structured data in demography research and

the utilization of models as effective tools for determining appropriate courses of action It highlights the fact that all issues pertaining to wildlife must be handled within the context of the whole ecosystem and that these issues cannot be resolved in isolation from other species and ecosystems This book gives the reader a more comprehensive understanding of the procedures and specifics involved in the protection and management of wildlife *Conservation of Wildlife Populations* L.
