Spectral Theory of Canonical Differential Systems. Method of Operator Identities L.A. Sakhnovich,2012-12-06 The spectral theory of ordinary differential operators L and of the equations 0 1 Ly AY connected with such operators plays an important role in a number of problems both in physics and in mathematics Let us give some examples of differential operators and equations the spectral theory of which is well developed Example 1 The Sturm Liouville operator has the form see 6 2 d y 0 2 Ly dx u x y Ay 2 In quantum mechanics the Sturm Liouville operator L is known as the one dimen sional Schrodinger operator The behaviour of a quantum particle is described in terms of spectral characteristics of the operator L Example 2 The vibrations of a nonhomogeneous string are described by the equa tion see 59 p x o 0 3 The first results connected with equation 0 3 were obtained by D Bernoulli and L Euler The investigation of this equation and of its various generalizations continues to be a very active field see e g 18 19 The spectral theory of the equation 0 3 has also found important applications in probability theory 20 Example 3 Dirac type systems of the form 0 4 where a x a x b x b x are also well studied Among the works devoted to the spectral theory of the system 0 4 the well known article of M G KreIn 48 deserves special mention   Spectral Theory of Canonical Systems Christian Remling,2018-08-21 Canonical systems occupy a central position in the spectral theory of second order differential operators They may be used to realize arbitrary spectral data and the classical operators such as Schr dinger Jacobi Dirac and Sturm Liouville equations can be written in this form Spectral Theory of Canonical Systems offers a selfcontained and detailed introduction to this theory Techniques to construct self adjoint realizations in suitable Hilbert spaces a modern treatment of de Branges spaces and direct and inverse spectral problems are discussed Contents Basic definitions Symmetric and self adjoint relations Spectral representation Transfer matrices and de Branges spaces Inverse spectral theory Some applications The absolutely continuous spectrum   **Spectral Theory of Canonical Systems** Christian Remling,2018-08-21 Canonical systems occupy a central position in the spectral theory of second order differential operators They may be used to realize arbitrary spectral data and the classical operators such as Schr dinger Jacobi Dirac and Sturm Liouville equations can be written in this form Spectral Theory of Canonical Systems offers a selfcontained and detailed introduction to this theory Techniques to construct self adjoint realizations in suitable Hilbert spaces a modern treatment of de Branges spaces and direct and inverse spectral problems are discussed Contents Basic definitions Symmetric and self adjoint relations Spectral representation Transfer matrices and de Branges spaces Inverse spectral theory Some applications The absolutely continuous spectrum   **Spectral Theory of Differential Operators** I.W.
