**Discoveries In Plant Biology (Volume II)** Shain-dow Kung, Shang-fa Yang, 1998-12-31 Scientific progress hinges on continual discovery and the extension of previous discoveries The important series of volumes Discoveries in Plant Biology is specially compiled to provide a microcosmic atlas of the landmark discoveries that span the breadth of plant biology Written by renowned plant biologists the papers describe how classic discoveries were made and how they have served as the basis for subsequent breakthroughs The 19 chapters in this second volume describe discoveries which contribute to the foundations of modern plant biology The contributors many of whom personally lit the way bring readers back in time as if on a journey to retrace the paths and rethink the ideas they followed These guided tours on how to decipher the natural laws will lead to an appreciation of the development of each field from simple concepts to an advanced multidisciplinary field of today This volume will be of special interest to botanists biochemists plant physiologists and geneticists and of general interest to those who are still fascinated by how discoveries are made

*Spectroscopic Membrane Probes* Leslie M. Loew, 2018-04-19 The general picture we have of membranes and of the properties of the proteins imbedded in them has arguably emerged directly from probe studies over the past 20 years This work is designed to make these techniques accessible to a broad audience of cell biologists The techniques discussed revolve primarily around the fluorescence of membrane probes but applications of light absorption and Raman scattering are included In addition to reviews of the major applications most chapters include information on the required apparatus experimental design data analysis and potential pitfalls

Methods in Plant Biochemistry Volume 1 P. M. Dey, 2012-12-02 Methods in Plant Biochemistry Volume 1 Plant Phenolics reviews current knowledge about techniques used in the analysis of the biochemistry of plant polyphenols and their importance in the agricultural and food industries It looks at the application of these techniques in the fractionation of cellular constituents isolation of enzymes electrophoretic separation of nucleic acids and proteins and chromatographic identification of the intermediates and products of cellular metabolism Organized into 15 chapters this book opens with an overview of the general procedures and measurement of total phenolics from

detecting phenolic substances in crude plant extracts to determining which classes they belong to and the quantitative estimation of total phenol The reader is introduced to the chemistry structural variation function and distribution of each class of plant phenolics and in a few cases where this is practicable detailed listings of known derivatives are given Most chapters focus on chromatographic separations and high performance liquid chromatography HPLC along with thin layer and paper Rf values with HPLC retention times and NMR spectroscopy The book also outlines the procedures for the extraction isolation separation and characterization of different classes of phenolic compounds ranging from phenols and phenolic acids to phenylpropanoids lignins stilbenes and phenanthrenes flavones and flavonols chalcones and aurones flavanoids anthocyanins biflavanoids tannins isoflavanoids quinones xanthenes and lichen substances The book is a valuable resource for students biochemists and researchers in the plant sciences      *Photosystem II* T. Wydrzynski, Kimiyuki Satoh, 2006-01-27 The most mysterious part of photosynthesis yet the most important for all aerobic life on Earth including ourselves is how green plants algae and cyanobacteria make atmospheric oxygen from water This thermodynamically difficult process is only achieved in Nature by the unique pigment protein complex known as Photosystem II using sunlight to power the reaction The present volume contains 34 comprehensive chapters authored by 75 scientific experts from around the world It gives an up to date account on all what is currently known about the molecular biology biochemistry biophysics and physiology of Photosystem II The book is divided into several parts detailing the protein constituents functional sites tertiary structure molecular dynamics and mechanisms of homeostasis The book ends with a comparison of Photosystem II with other related enzymes and bio mimetic systems Since the unique water splitting chemistry catalyzed by Photosystem II leads to the production of pure oxygen gas and has the potential for making hydrogen gas a primary goal of this book is to provide a molecular guide to future protein engineers and bio mimetic chemists in the development of biocatalysts for the generation of clean renewable energy from sunlight and water      **Probing Photosynthesis** Mohammad Yunus, Uday Pathre, Prasanna Mohanty, 2014-04-21 A thorough understanding of the mechanisms of photosynthesis regulation of structure and function and the adaptive strategies of oxygenic photosynthetic organisms is central to any effort directed at improving crop productivity and providing sustainable agriculture Photosynthesis is the most widely researched topic in plant science Further probing of its mechanisms regulation and adaptation employing a variety of modern tools and techniques is imperative to gain a better insight of this very intricate process Unravelling the cause of stress impairments and stress tolerance in plants would help in ensuring the optimum production of food fibres and fuels Probing Photosynthesis represents the state of the art on photosynthesis and provides details of experimental approaches that have been adopted to understand the complex regulatory and adaptive processes Its twenty seven chapters have been divided into four sections Evolution structure and function Biodiversity metabolism and regulation Stress and adaptations and Techniques With contributions from leading subject experts from Australia Canada France Germany India Israel Japan Sweden Switzerland the UK and USA this
