## **Speech And Language Readings From The Encyclopedia Of Neuroscience:**

Neuromotor Mechanisms in Human Communication Doreen Kimura,1993-05-06 This monograph is based on 20 years of research with patients who have experienced pathology in one hemisphere of the brain It deals with brain mechanisms in human communicative behavior and with related motor functions from a broadly biological point of view In so doing the work discusses the possible evolutionary origins of human communication the relation of brain mechanisms in communicative behavior to analogous nonhuman behaviors and the neural systems involved in various levels and kinds of communication In addition noncommunicative mechanisms which parallel those used in communication such as manual and oral praxis and constructional behavior are outlined in detail Individual differences in brain organization for such functions related to hand preference and sex are also explored Although there is extensive reference to central nervous system pathology the emphasis throughout is on how the findings contribute to understanding normal brain mechanisms Much new data is presented along with the theoretical treatment of human communication which emphasizes a behavioral rather than a linguistic approach This in turn provides continuity with nonhuman primates and early hominids The work will interest psycholinguists cognitive psychologists neurologists clinical neuropsychologists speech pathologists and advanced students in these fields

**Bioacoustics**, 1992      **The SAGE Encyclopedia of Human Communication Sciences and Disorders** Jack S. Damico, Martin J. Ball, 2019-03-01 The SAGE Encyclopedia of Human Communication Sciences and Disorders is an in depth encyclopedia aimed at students interested in interdisciplinary perspectives on human communication both normal and disordered across the lifespan This timely and unique set will look at the spectrum of communication disorders from causation and prevention to testing and assessment through rehabilitation intervention and education Examples of the interdisciplinary reach of this encyclopedia A strong focus on health issues with topics such as Asperger s syndrome fetal alcohol syndrome anatomy of the human larynx dementia etc Including core psychology and cognitive sciences topics such as social development stigma language acquisition self help groups memory depression memory Behaviorism and cognitive development Education is covered in topics such as cooperative learning special education classroom based service delivery The editors have recruited top researchers and clinicians across multiple fields to contribute to approximately 640 signed entries across four volumes      **Reading and Dyslexia** Thomas Lachmann, Tina Weis, 2018-07-28 In this volume a group of well known experts of the field cover topics ranging from basic visual and auditory information processing to higher order cognition in reading and dyslexia from basic research to remediation approaches and from well established theories to new hypotheses about reading acquisition and causes for its failure Reading is one of the most intriguing feats human evolution ever came up with There is no evolutionary basis for reading as such reading is secondary to language and the result of a complex skill acquisition at the end of which almost all pre existing cognitive functions are mobilized With the right instruction and practice most people learn this skill smoothly Some however have problems despite same opportunities and general cognitive abilities This developmental dyslexia results from a neuro developmental disorder leading to deficits in reading relevant information processing But what deficits are these and can they be trained      *Encyclopedia of Behavioral Neuroscience: H-O* George F. Koob, Michel Le Moal, Richard F. Thompson, 2010      *Experimental Methods in Neuropsychology* Kenneth Hugdahl, 2012-12-06 Clinical neuropsychology typically employs large standardized test batteries to cover the cognitive deficits caused by brain lesions and neurodegenerative diseases The neuropsychologist moves between three levels of explanation the behavioral level the cognitive level and the brain level The behavioral level is measured as actual performance on a test i e the obtained test score The cognitive level refers to the underlying cognitive processes that

are reflected in the test scores The brain level finally refers to the neural underpinnings and substrates to the cognitive processes The recent decades have witnessed a dramatic increase in our knowledge about cognitive processes and the underlying neural substrates Experimental techniques and paradigms have played an important role in the accumulation of new knowledge in this field Thus there is a need to present a collection of experimental paradigms and techniques to neuropsychology Some of these paradigms and techniques have however a long history in neuropsychology like dichotic listening and EEG measures while others are new and novel to most neuropsychologists like animal model paradigms and brain imaging and brain stimulation Experimental techniques typically aim at discovery of causal relationships and with a focus on search for mechanisms In the first chapter Merrill Hiscock presents an overview of experimental techniques and its adaptation in clinical neuropsychology with a focus on behavioral techniques and methods
