**Modeling Sensorineural Hearing Loss** Walt Jesteadt, 2019-01-04 A recent study indicates that 20 million people in the United States have significant sensorineural hearing loss Approximately 95% of those people have partial losses with varying degrees of residual hearing These percentages are similar in other developed countries What changes in the function of the cochlea or inner ear cause such losses What does the world sound like to the 19 million people with residual hearing How should we transform sounds to correct for the hearing loss and maximize restoration of normal hearing Answers to such questions require detailed models of the way that sounds are processed by the nervous system both for listeners with normal hearing and for those with sensorineural hearing loss This book contains chapters describing the work of 25 different research groups A great deal of research in recent years has been aimed at obtaining a better physiological description of the altered processes that cause sensorineural hearing loss and a better understanding of transformations that occur in the perception of those sounds that are sufficiently intense that they can still be heard Efforts to understand these changes in function have lead to a better understanding of normal function as well This research has been based on rigorous mathematical models computer simulations of mechanical and physiological processes and signal processing simulations of the altered perceptual experience of listeners with sensorineural hearing loss This book provides examples of all these approaches to modeling sensorineural hearing loss and a summary of the latest research in the field

Responding to Crisis Dan Pyle Millar, Robert L. Heath, 2003-12-08 In recent years researchers and practitioners have explored the nature theory and best practices that are required for effective and ethical crisis preparation and response The consequences of being unprepared to respond quickly appropriately and ethically to a crisis are dramatic and well documented For this reason crisis consulting and the development of crisis response plans and protocols have become more than a cottage industry Taking a rhetorical view of crisis events and utterances this book is devoted to adding new insights to the discussion and to describing a rhetorical approach to crisis communication To help set the tone for that description the opening chapter reviews a rhetorical perspective on organizational crisis As such it raises questions and provokes issues more than it addresses and answers them definitively The other chapters can be viewed as a series of experts participating in a panel discussion The challenge to each of the authors is to add depth and breadth of understanding to the analysis of the rhetorical implications of a crisis as well as to the strategies that can be used ethically and responsibly Central to this analysis is the theoretic perspective that crisis response requires rhetorically tailored statements that satisfactorily address the narratives surrounding the crisis which are used by interested parties to define and judge it This volume will be of value to scholars and students interested in crisis communication and is certain to influence future work and research on responding to crises
