Widiger, Paul J. Sirovatka, Darrel A. Regier, Erik Simonsen, 2007-05-03 DSM IV and ICD 10 both diagnose personality disorders categorically yet studies indicate that many patients meet criteria for an excessive number of diagnoses raising the question of whether personality disorders are discrete conditions or rather distinctions along dimensions of general personality functioning This collection of papers renews long standing proposals for a dimensional model of personality disorder describing alternative models addressing questions about their clinical application and utility and suggesting that future research seek to integrate such models within a common hierarchical structure With contributions by preeminent researchers in the field Dimensional Models of Personality Disorders is drawn from a conference series convened by APA WHO and NIH in order to plan for the fifth edition of the DSM The Nomenclature Work Group concluded that consideration should be given to basing part or all of DSM V on dimensions rather than categories and recommended that a dimensional model for personality disorders should serve as a basis for exploring dimensional approaches in other areas Accordingly the volume opens with a presentation of 18 proposals for dimensional models and proceeds with provocative contributions on a number of related issues ranging from hard science to clinical practice Among the topics addressed are Behavioral and molecular genetic research supporting an etiologically informed dimensional classification of personality disorders The as yet tenuous associations between dimensional trait measures of personality as contained in the models of Cloninger Depue and Siever Davis and specific neurobiological measures as examined in neurotransmitter research Potential links between childhood and adolescent temperament and personality dimensions and adult personality psychopathology Studies examining the covariation of personality dimensions across cultures The continuity of Axis I and Axis II disorders and a proposed hierarchical structure of mental disorders that integrates the psychopathology of Axis I disorders with specific personality traits The dual challenges of coverage and cutoffs that must be addressed if dimensional models are to be considered viable alternatives to the existing categorical diagnostic system Although the editors acknowledge that concerns are certain to be raised regarding conversion to a dimensional classification such as the disruption to clinical practice by a radical shift in diagnosing personality disorder these papers make a strong case for opening the field to alternative ways of enhancing clinical utility and improving the validity of basic classification concepts Together they offer stimulating insight into how we approach personality disorders with the hope of encouraging a new model of diagnosis for DSM V

**Human Development** Ursula M. Staudinger, Ulman E.R. Lindenberger, 2012-12-06 K Warner Schaie I am pleased to write a foreword for this interesting volume particularly as over many years I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague mentor or research collaborator The editors begin their introduction by asking why one would want to read yet another book on human development They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so

essential to understanding development This volume provides a positive remedy to past deficiencies in volumes on human development with a well organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure This approach does not surprise After all the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin whether as students junior scientists or senior visitors That institute under the leadership of Paul Baltes has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality Over the past two decades it has influenced the careers of a generation of scientists who have advocated long term studies of human development in an interdisciplinary context Personality and Brain Disorders Danilo Garcia,Trevor Archer,Richard M. Kostrzewa,2019-05-21

Brain disorders neurodevelopmental neurodegenerative and affective disorders can be investigated treated and prevented using person centered methods Because researchers have not reached a clear consensus on whether or not personality is stable or changeable it has been difficult to outline how to use these methods in the care of people with brain disorders Thus the first part aims to identify the ways in which brain disorders and personality are linked The second part explores different person centered approaches that can be incorporated in a healthcare or education setting to help people with various brain disorders and to promote physical mental and social health The third part focuses on challenges and new venues **Genetic Mechanisms of Biomarkers in Schizophrenia, Bipolar Disorder and Depression** Hongsheng Gui,Shaohua Hu,Qiang Wang,Xiancang Ma,Sarah Tarbox-Berry,2022-02-01
