Proceedings of the First International Symposium on Cyclodextrins J. Szejtli,2013-11-11 Cyclodextrins are gaining industrial interest owing to their particular structure These cyclic amyloses are commonly composed of 6 7 or 8 named a 8 y CD glucose units They undergo complexation with quite a large number of substances by molecular inclusion Their potential for industrial application is substantiated by their ability to protect fragile substances from oxygen and UV to delay the evolution of volatiles and to aid the ancillary processing of dangerous or volatile substances in powdered form Though a 8 and y CD exhibit different inclusion specificity 8 CD has found more attention than the others This is due to the fact that most of the cyclodextrin producing enzymes known produce predominantly 8 CD Furthermore 8 CD is by far the least soluble form leading to a relatively simple production and purification Consequently 8 CD is already in production on an industrial scale while a and 8 CD are still more or less regarded as specialities A further CD producing enzyme has been found in the medium of *Klebsiella pneumoniae* l Since this CGT appeared to produce predominantly a CD it has been chosen to develop a process for the production of a CD **MATERIALS AND METHODS** Analysis of cyclodextrins HPLC on Lichrosorb NH 10 m with acetonitrile 2 water 65 35 per volume Test for CGT activity as described by Landert elsewhere in this Volume Starch potato starch as obtained from Blattmann Wädenswil Switzerland Easiest Keyboard Collection: 40 Chart Toppers Wise
