**Ten Minute Ecologist, 2nd Edition** John Janovy, 2011-09-30 This book provides important answers to twenty questions about environmental issues Presented in in plain easily understood non threatening language it will help busy people become ecologically literate Ecology and Management of Cowbirds and Their Hosts James N. M. Smith, Terry L. Cook, Stephen I.

Rothstein, Scott K. Robinson, Spencer G. Sealy, 2014-09-05 In the past two centuries cowbirds have increased in numbers and extended their range across North America while many of the native songbird species whose nests they parasitize to raise their young have declined This timely book collects forty essays by most of the principal authorities on the biology and management of cowbirds The book's goals are to explore the biology of cowbirds the threats they pose to host species and populations and the management programs that are being undertaken to minimize these threats The book is organized into five sections each with an extended editors introduction that places the contributions in a broad up to date setting The sections cover The changing abundance of cowbirds and the ways in which their numbers can be estimated Host choice by cowbirds the negative effects of cowbirds on particular host species and the daily patterns of cowbird behavior Behavioral interactions between cowbirds and specific host species Patterns of cowbird abundance and host use across varying landscapes Management programs designed to control cowbirds and protect threatened songbirds **Molecular Microbial**

**Ecology Manual** Antoon D. L. Akkermans, Jan Dirk Van Elsas, Frans J. De Bruijn, 2014-01-13 For a long time microbial ecology has been developed as a distinct field within Ecology In spite of the important role of microorganisms in the environment this group of invisible organisms remained unaccessible to other ecologists Detection and identification of microorganisms remain largely dependent on isolation techniques and characterisation of pure cultures We now realise that only a minor fraction of the microbial community can be cultivated As a result of the introduction of molecular methods microbes can now be detected and identified at the DNA RNA level in their natural environment This has opened a new field in ecology Molecular Microbial Ecology In the present manual we aim to introduce the microbial ecologist to a selected number of current molecular techniques that are relevant in microbial ecology The first edition of the manual contains 33 chapters and an equal number of additional chapters will be added this year Since the field of molecular ecology is in a continuous progress we aim to update and extend the Manual regularly and will invite anyone to deposit their new protocols in full detail in the next edition of this Manual We hope this book finds its place where it was born at the lab bench Antoon D L Akkermans Jan Dirk van Elsas and Frans J de Bruijn March 1995 Molecular Microbial Ecology Manual 1 3 6 1 8 1996 1996 Kluwer Academic Publishers *Marine Conservation Ecology* John Roff, 2013-09-05 This major textbook provides a broad coverage of the ecological foundations of marine conservation including the rationale importance and practicalities of various approaches to marine conservation and management The scope of the book encompasses an understanding of the elements of marine biodiversity from global to local levels threats to marine biodiversity and the structure and function of marine

environments as related to conservation issues The authors describe the potential approaches initiatives and various options for conservation from the genetic to the species community and ecosystem levels in marine environments They explore methods for identifying the units of conservation and the development of defensible frameworks for marine conservation They describe planning of ecologically integrated conservation strategies including decision making on size boundaries numbers and connectivity of protected area networks The book also addresses relationships between fisheries and biodiversity novel methods for conservation planning in the coastal zone and the evaluation of conservation initiatives

*Urban Ecology* Philip James,Ian Douglas,2023-12-22 This fully revised second edition reflects the great expansion in urban ecology research action and teaching since 2015 Urban ecology provides an understanding of urban ecosystems and uses nature based techniques to enhance habitats and alleviate poor environmental conditions Already the home to the majority of the world s people urban areas continue to grow causing ecological changes throughout the world To help students of all professions caring for urban areas and the people animals and plants that live in them the authors set out the environmental and ecological science of cities linkages between urban nature and human health urban food production in cities and how we can value urban nature The authors explore our responsibilities for urban nature and greening ecological management techniques and the use of nature based solutions to achieve a better more sustainable urban future and ensure that cities can climate change and become more beautiful and more sustainable places in which to live This text provides the student and the practitioner with a critical scientific overview of urban ecology that will be a key source of data and ideas for studies and for sound urban management

**Handbook of Ecocriticism and Cultural Ecology** Hubert Zapf,2016-05-10 Ecocriticism has emerged as one of the most fascinating and rapidly growing fields of recent literary and cultural studies From its regional origins in late twentieth century Anglo American academia it has become a worldwide phenomenon which involves a decidedly transdisciplinary and transnational paradigm that promises to return a new sense of relevance to research and teaching in the humanities A distinctive feature of the present handbook in comparison with other survey volumes is the combination of ecocriticism with cultural ecology reflecting an emphasis on the cultural transformation of ecological processes and on the crucial role of literature art and other forms of cultural creativity for the evolution of societies towards sustainable futures In state of the art contributions by leading international scholars in the field this handbook maps some of the most important developments in contemporary ecocritical thought It introduces key theoretical concepts issues and directions of ecocriticism and cultural ecology and demonstrates their relevance for the analysis of texts and other cultural phenomena

urgent questions facing humanity today What is happening to our planet What can we do about it How do we balance the concerns of people against the rights of animals and against the needs of an ecosystem What is the most skillful way to enact change And how do we fight on even when our efforts seem to bear no fruit Inspiring edifying and transformative this should be required reading for any citizen of the world     The Journal of Ecology ,1924 Vols 16 21 include supplement British empire vegetation abstracts     *Model Systems in Behavioral Ecology* Lee Alan Dugatkin,2019-12-31 A key way that behavioral ecologists develop general theories of animal behavior is by studying one species or a closely related group of species model systems over a long period This book brings together some of the field s most respected researchers to describe why they chose their systems how they integrate theoretical conceptual and empirical work lessons for the practice of the discipline and potential avenues of future research Their model systems encompass a wide range of animals and behavioral issues from dung flies to sticklebacks dolphins to African wild dogs from foraging to aggression territoriality to reproductive suppression *Model Systems in Behavioral Ecology* offers an unprecedented systems focus and revealing insights into the confluence of personal curiosity and scientific inquiry It will be an invaluable text for behavioral ecology courses and a helpful overview and a preview of coming developments for advanced researchers The twenty five chapters are divided into four sections insects and arachnids amphibians and reptiles birds and mammals In addition to the editor the contributors include Geoff A Parker Thomas D Seeley Naomi Pierce Kern Reeve Gerald S Wilkinson Bert H Ildobler and Flavio Roces George W Uetz Michael J Ryan and Gil Rosenthal Judy Stamps H Carl Gerhardt Barry Sinervo Robert Warner Manfred Milinski David F Westneat Alan C Kamil and Alan B Bond Paul Sherman Jerram L Brown Anders Pape M ller Marc Bekoff Richard C Connor Joan B Silk Christopher Boesch Scott Creel A H Harcourt and Tim Caro and M J Kelly     **A Biologist's Guide to Mathematical Modeling in Ecology and Evolution** Sarah P. Otto,Troy Day,2007-03-12 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of

mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available *Ecology of a Tool* Pierre Perequin, Anne-Marie Petrequin, 2020-04-30 New Guinea and especially Papua New Guinea is the last country in the world where ethnologists were able to closely observe film and photograph the whole manufacturing chain of polished stone felling tools from quarry extraction to finished tool use Research on the polished blades of PNG has evolved over the years following changing philosophies and research agendas While it is clear that an exceptional sum of information has been gathered it remains centered on that small part of the Highlands where conditions for field research were more pleasant than elsewhere This presentation of Irian Jaya axes therefore tackles a topic that remains mostly unexplored Until now stone tool research in New Guinea has followed an anthropocentric approach in which tools are seen more as vectors for social exchanges than as means of acting on the environment This monograph takes a different approach Here polished stone blades are placed at the center of the world between on one side the transformed natural environment and on the other the social and economic environment This approach allows for a suggestion of new avenues of inference in archaeology as well as to test and abandon existing ones In this volume the stone blade is considered as a living being existing in balance within its biotope This idea is not far removed from the beliefs of Irian Jaya farmers for whom life animates certain objects of their material culture Following a brief presentation of Irian Jaya the function of polished stone blades in Irian Jaya societies and the distribution of hafting styles is described defined and studied along with the quarrying zones and the areas of diffusion and use of their production The different trends in each area of polished blade production and exchanges are also noted Finally it concludes with a discussion of the ethnoarchaeological potential of these contemporary observations **Spatial Ecology and Conservation Modeling** Robert Fletcher, Marie-Josée Fortin, 2019-02-15 This book provides a foundation for modern applied ecology Much of current ecology research and conservation addresses problems across landscapes and regions focusing on spatial patterns and processes This book is aimed at teaching fundamental concepts and focuses on learning by doing through the use of examples with the software R It is intended to provide an entry level easily accessible foundation for students and practitioners interested in spatial ecology and conservation *Syngnathid Fishes: Biology, Ecology, Physiology, Conservation and Innovative Rearing Techniques* Miquel Planas, Michele Gristina, Jorge Palma, Peter R. Teske, Geng Qin, Olivia Roth, Emily Rose, 2023-11-27 Syngnathids are a large and diverse group of fishes including seahorses pipefishes seadragons and pipehorses These iconic and vulnerable fishes are distributed worldwide in warm temperate to tropical environments usually in coastal shallow water Most species are marine and strongly associated with vegetal communities or coral reefs which provide shelter and the necessary dietary resources Syngnathids have a unique

reproductive mode with parental care diverse brooding structures and other special characteristics that make them highly vulnerable These iconic fishes are facing several threats namely environmental disturbances and habitat regression However many of their biological ecological and physiological characteristics have been poorly investigated and limited to a few species Despite their vulnerability to date a large number of species are listed as Data Deficient meaning they could potentially be threatened by IUCN due to inadequate or insufficient information mainly on distribution and or population status Due to the progressive regression of wild populations long term monitoring programs are necessary to evaluate population dynamics fisheries and habitat quality On the other hand these charismatic fishes especially seahorses are excellent flagship species for marine biodiversity conservation Unfortunately illegal harvesting and traffic of seahorses and other syngnathids is a fact despite CITES controls Hence the development of new tools for fish traceability and updated policies are also necessary to reduce the threats to these fishes

*Urban Bird Ecology and Conservation* Christopher A.

Lepczyk, Paige S. Warren, 2012-10-26 Now that more than half of the world's population lives in cities the study of birds in urban ecosystems has emerged at the forefront of ornithological research An international team of leading researchers in urban bird ecology and conservation from across Europe and North America presents the state of this diverse field addressing classic questions while proposing new directions for further study Areas of particular focus include the processes underlying patterns of species shifts along urban rural gradients the demography of urban birds and the role of citizen science and human avian interaction in urban areas This important reference fills a crucial need for scientists planners and managers of urban spaces and all those interested in the study and conservation of birds in the world's expanding metropolises

**The Ecology of Attention** Yves Citton, 2017-01-09 Information overload the shallows weapons of mass distraction the googlization of minds countless commentators condemn the flood of images and information that dooms us to a pathological attention deficit In this new book cultural theorist Yves Citton goes against the tide of these standard laments to offer a new perspective on the problem of attention in the digital age Phrases like paying attention and investing ones attention attest to our mistaken belief that attention can be conceptualized in narrow economic terms We are constantly drawn towards attempts to quantify and commodify attention even down to counting the number of likes a picture receives on Facebook or a video on YouTube By contrast Citton argues that we should conceptualize attention as a kind of ecology and examine how the many different environments to which we are exposed from advertising to literature search engines to performance art condition our attention in different ways In a world where the demands on our attention are ever increasing this timely and original book will be of great interest to students and scholars in media and communications and in literary and cultural studies and to anyone concerned about the long term consequences of the profusion of images as well as digital content in the age of the internet

*Principles of Soundscape Ecology* Bryan C. Pijanowski, 2024-06-06 From a founding figure in the field the definitive introduction to an exciting new science What do the sounds of a chorus of tropical birds and frogs a clap of thunder and a cacophony of urban traffic have in common They are all components of a soundscape acoustic environments that have been identified by scientists as a combination of the biophony geophony and anthrophony respectively of all of Earth's sound sources As sound is a ubiquitous occurrence in nature it is actively sensed by most animals and is an important way for them to understand how their environment is changing For humans environmental sound is a major factor in creating a psychological sense of place and many forms of sonic expression by people embed knowledge and culture In this book soundscape ecology pioneer Bryan C Pijanowski presents the definitive text for both students and practitioners who are seeking to engage with this thrilling new field Principles of Soundscape Ecology clearly outlines soundscape ecology's critical foundations key concepts methods and applications Fundamentals include concise and valuable descriptions of the physics of sound as well as a thorough elucidation of all sounds that occur on Earth Pijanowski also presents a rich overview of the

ecological sociocultural and technical theories that support this new science illustrating the breadth of this amazingly transdisciplinary field In methods he describes the principles of data mining signal processing and mixed methods approaches used to study soundscapes in ecological social or socio ecological contexts The final section focuses on terrestrial aquatic urban and music applications demonstrating soundscape ecology s utility in nearly all spaces

**Ecology or Catastrophe** Janet Biehl,2015-09-01 Murray Bookchin was not only one of the most significant and influential environmental philosophers of the twentieth century he was also one of the most prescient From industrial agriculture to nuclear radiation Bookchin has been at the forefront of every major ecological issue since the very beginning often proposing a solution before most people even recognized there was a problem Ecology or Catastrophe The Life of Murray Bookchin is the first biography of this groundbreaking environmental and political thinker Author Janet Biehl worked as his collaborator and copyeditor for 19 years editing his every word Thanks to her extensive personal history with Bookchin as well as her access to his papers and archival research Ecology or Catastrophe offers unique insight into his personal and professional life Founder of the social ecology movement Bookchin first started raising environmental issues in 1952 He foresaw global warming in the 1960s and even then argued that we should look into renewable energy sources as an alternative to fossil fuels Wary of pesticides and other chemicals used in industrial agriculture he was also an early advocate of small scale organic farming which has developed into the present locavore movement and the revival of organic markets Even Occupy can trace the origins of its leaderless structure and general assemblies to the nonhierarchical organizational form Bookchin developed as a libertarian socialist Bookchin believed that social and ecological issues were deeply intertwined Convinced that capitalism pushes businesses to maximize profits and ignore humanist concerns he argued that eco crises could be resolved by a new social arrangement His solution was Communalism a new form of libertarian socialism that he developed An optimist and utopian Bookchin believed in the potentiality for human beings to use reason to solve all social and ecological problems

The Truth of Ecology Dana Phillips,2003 A wide ranging appraisal of environmental thought It explores such topics as the history of ecology radical science studies and ecology the need for greater theoretical sophistication in ecocriticism the dubious legacy of Thoreau and the contradictions of contemporary nature writing
