Teratogenic Mechanisms (Volume 1). TVN Persaud (Ed),1979 **Teratogenic Mechanisms** T.V.N.

Persaud,2012-12-06 The study of birth defects has assumed an importance even greater now than in the past because mortality rates attributed to congenital anomalies have declined far less than those for other causes of death such as infectious and nutritional diseases It is estimated that as many as 50% of all pregnancies terminate as miscarriages In the majority of cases this is the result of faulty development Major congenital malformations are found in at least 2% of all liveborn infants and 22% of all stillbirths and infant deaths are associated with severe congenital anomalies Teratological studies of an experimental nature are neither ethical nor justifiable in humans Numerous investigations have been carried out in laboratory animals and other experimental models in order to improve our understanding of abnormal intra uterine development In less than two decades the field of experimental teratology has advanced phenomenally As a result of the wide range of information that is now accumulating it has become possible to obtain an insight into the causes mechanisms and prevention of birth defects However considerable work will be needed before these problems can be resolved This book brings together some of the more recent and important research findings related to the mechanisms and pathogenesis of abnormal development It is not only a documentation of the latest experimental work but it also points out future directions that seem productive and challenging

Radiology of Infectious Diseases: Volume 1 Hongjun Li,2015-08-28 This book provides a comprehensive overview of diagnostic imaging in infectious diseases It starts with a general review of infectious diseases including their classification characteristics and epidemiology In separate chapters the authors then introduce the radionuclide imaging of 50 kinds of infectious diseases Volume 1 covers 21 viral infections Volume 2 has 29 chapters discussing 24 bacterial infections and 5 parasitic infections Each disease is clearly illustrated using cases combined with high quality computed tomography CT and magnetic resonance imaging MRI The book provides a valuable reference source for radiologists and doctors working in the area of infectious diseases

Developmental Toxicology Keith Snell, 2012-12-06 Since the 1930s and the work of Hale and Warkany on birth defects produced by variations in dietary vitamin A it has been recognised that the developing fetus is particularly vulnerable to adverse influences in the environment Studies of malformations at birth remained largely in the hands of paediatricians who for instance quickly established the connection between rubella infection in early pregnancy and the birth of severely affected infants However it was through the tragic events of 1962 when dramatic increases in the incidence of phocomelia in newborn infants in Germany the United Kingdom Japan and other countries were traced to the use of the apparently non toxic sedative thalidomide by pregnant women that toxicologists were brought face to face with the devastating possibility of chemically induced developmental abnormalities It had been shown earlier that chemotherapeutic agents could cause damage to the developing organism but the absence of any known examples of drug induced birth defects had produced an air of complacency which was reinforced by the lack of any specific regulatory requirements for safety evaluation in this area The magnitude of the thalidomide tragedy affecting some 10000 malformed children was sufficient to cause an immediate and some would say hasty reaction by government drug regulatory agencies throughout the world to construct a test protocol which would detect potential teratogenic substances that might give rise to anatomical malformations

Handbook of Developmental Toxicology Ronald D. Hood, 1996-10-23 Developmental toxicology an increasingly important area encompasses the study of toxicant effects on development from conception through puberty The Handbook of Developmental Toxicology provides useful insights gained from hands on experience as well as a theoretical foundation In this convenient reference you will find information not previously gathered in one source including comparative developmental milestones historical data and a glossary of terms used in developmental toxicity evaluation This handbook is a practical guide for individuals who are responsible for testing chemical agents and for regulatory scientists who must evaluate studies interpret data and perform risk assessments Packed with features the Handbook of Developmental Toxicology is ideal for training students and technicians in developmental toxicology

Division of Research Grants,1972 **Research Awards Index** ,1987 Reproductive and Developmental Toxicity of Metals Tom Clarkson,2012-12-06 The Permanent Commission and International Association on Occupational Health PCIAOH established in 1969 a Subcommittee on the Toxicology of Metals under the chairmanship of Lars Friberg This committee which later was named the Scientific Committee on the Toxicology of Metals has organized a number of previous meetings that have led to publications in three major areas of metal toxicology a preliminary meeting in Slanchev Bryag Bulgaria in 1971 followed by a meeting in 1972 in Buenos Aires Argentina which produced two reports Dukes and Friberg 1971 Task Group on Metal Accumulation 1973 that discussed the metabolism of metals with special reference to absorption excretion and biological half times The effects and dose response relationships of toxic metals including a discussion of general principles was the second major topic addressed by the Scientific Committee at a meeting in Tokyo in 1974 Nordberg 1976

The philosophy of this conference as well as the previous one in Buenos Aires was based on the concept of a threshold dose for the occurrence of adverse effects. In a conference held in Atlanta, USA, in 1980, the scope of discussion on metal effects was broadened to include the role of metals in carcinogenesis. Thus, for the first time, the Scientific Committee took under consideration the possibility of non-threshold relationships (Belman and Nordberg, 1981). In addition, the Scientific Committee on the Toxicology of Metals organized a workshop on metal interactions in Stockholm, 1977 (Nordberg et al.).
