Fraenkel-Conrat, 2013-06-29 The time seems ripe for a critical compendium of that segment of the biological universe we call viruses Virology as a science having passed only recently through its descriptive phase of naming and numbering has probably reached that stage at which relatively few new truly new viruses will be discovered Triggered by the intellectual probes and techniques of molecular biology genetics bio chemical cytology and high resolution microscopy and spectroscopy the field has experienced a genuine information explosion Few serious attempts have been made to chronicle these events This comprehensive series which will comprise some 6000 pages in a total of about 18 volumes represents a commitment by a large group of active investigators to analyze digest and expostulate on the great mass of data relating to viruses much of which is now amorphous and disjointed and scattered throughout a wide literature In this way we hope to place the entire field in perspective and to develop an invaluable reference and sourcebook for researchers and students at all levels This series is designed as a continuum that can be entered anywhere but which also provides a logical progression of developing facts and integrated concepts      **Cumulated Index Medicus** ,1980      *Cellular and Molecular Biology of Mammary Cancer*

E. Anderson, G. Heppner, W. Kidwell, Daniel Medina, 2012-12-06 The idea for this book arose during the 1985 Gordon Conference on Mammary Gland Biology New developments in the methodology of cell biology and the explosive growth of molecular biology had begun to impact upon our understanding of mammary gland growth and function It seemed a propitious time for summarizing the current status of knowledge of the cell and molecular biology of mammary cancer and for attempting to outline future areas of concern and interest The reviews presented here were completed by the Fall of 1986 Although new insights will surely continue to emerge it is hoped that the material in this volume will form not only a current update but a basic core of information for future experiments We have not attempted to cover all areas of mammary gland transformation Those areas where recent detailed reviews are already available have been omitted Also the areas of normal gland development cell ultrastructure hormone responsiveness chemotherapy and clinical aspects of mammary cancer have not been included Instead we have selected those areas where the development of new methodology reagents and results have led to new ideas about mammary gland function and development as they are related to neoplasia      **Pestivirus**

*Progress in Encephalitis Research* Ryan A. Ebert, 2005 Encephalitis means inflammation of the brain but it usually refers to brain inflammation caused by a virus This severe and potentially life threatening disease is rare Encephalitis takes two forms categorised by the two ways that viruses can infect the brain Primary encephalitis This occurs when a virus directly invades the brain and spinal cord It can happen to people at any time of the year sporadic encephalitis or it can be part of an outbreak epidemic encephalitis Secondary post infectious encephalitis This form occurs when a virus first infects another part of the body and secondarily enters the brain The primary form of the disease is more serious while the secondary form is more common This new volume presents important research from around the globe

Breast Cancer: Cellular and Molecular Biology Marc E. Lippman, Robert B. Dickson, 1988-08-31 Where do you begin to look for a recent authoritative article on the diagnosis or management of particular malignancy The few general oncology text books are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more
