

SOFT SKILLS

Training for Your Employees

Soft skills are personal attributes that enable someone to interact effectively and harmoniously with other people. They include things like communication, problem-solving, teamwork, and time management. While hard skills are essential for employees to possess, it's often the soft skills that make the difference between a good employee and a great one. That's why employers must provide soft skills training for their employees.

#1

TRAINING:

In-house Training

For employers who want to customize training to their needs. The more intimate setting benefits employees who may feel more comfortable learning in a smaller group.

Online Training

Convenient for employers and employees. Often more affordable than in-house training, it provides employees with the flexibility to learn at their own pace.

Classroom Training

For employees who learn best in a structured setting, this also allows for more interaction and collaboration.

#2

KPIs:

If employees are more productive after the training, it impacts them positively.

Employee Satisfaction

If employees are unhappy with the training, they're unlikely to stick with it or see any benefits.

Retention Rates

If employees leave the company at a higher rate after the training, likely, the exercise is not meeting their needs.

Productivity

If employees are more productive after the training, it impacts them positively.

Education, Skills, and Technical Change Charles R. Hulten,Valerie A. Ramey,2019-01-11 Over the past few decades US business and industry have been transformed by the advances and redundancies produced by the knowledge economy The workplace has changed and much of the work differs from that performed by previous generations Can human capital accumulation in the United States keep pace with the evolving demands placed on it and how can the workforce of tomorrow acquire the skills and competencies that are most in demand Education Skills and Technical Change explores various facets of these questions and provides an overview of educational attainment in the United States and the channels through which labor force skills and education affect GDP growth Contributors to this volume focus on a range of educational and training institutions and bring new data to bear on how we understand the role of college and vocational education and the size and nature of the skills gap This work links a range of research areas such as growth accounting skill development higher education and immigration and also examines how well students are being prepared for the current and future world of work

Resources in Education ,2000-10 **Challenging Transitions in Learning and Work** ,2010-01-01 In the past two decades advanced capitalist countries have seen sustained growth in labour market participation along with a growth in the number of jobs workers tend to have in their working lives Over a slightly longer period we also see that participation in both formal educational attainment and a range of non compulsory learning training has grown However labour market discrimination based on gender age disability and race ethnicity remains a serious issue in virtually all OECD countries Challenging Transitions in Learning and Work presents a critical and expansive exploration of learning and work transitions within this context These transitions are challenging for those enmeshed in them and need to be actively challenged through

the critical research reported The impetus for this volume its conceptual framing and much of the research emerges from the team of Canadian researchers who together completed case study and survey projects within the Work and Lifelong Learning WALL network The authors include leading scholars with established international reputations as well as emerging researchers with fresh perspectives This volume will appeal to researchers and policy makers internationally with an interest in educational studies and industrial sociology Information Systems and Technology Education: From the University to the Workplace Lowry, Glenn R., Turner, Rodney L., 2007-05-31 This book presents a multifaceted global view of the human dynamics of education supply demand and career development in the information systems and technology industry It provides a tool to meet the challenges of providing improved education and employing an optimal supply of information systems and technology graduates in the decades to come Provided by publisher Class Degrees Evan Watkins, 2009-08-25 A current truism holds that the undergraduate degree today is equivalent to the high school diploma of yesterday But undergraduates at a research university would probably not recognize themselves in the historical mirror of high school vocational education Students in a vast range of institutions are encouraged to look up the educational social scale whereas earlier vocational education was designed to cool out expectations of social advancement by training a working class prepared for massive industrialization In Class Degrees Evan Watkins argues that reforms in vocational education in the 1980s and 1990s can explain a great deal about the changing directions of class formation in the United States as well as how postsecondary educational institutions are changing Responding to a demand for flexibility in job skills and reflecting a consequent aspiration to choice and perpetual job mobility those reforms aimed to eliminate the separate academic status of vocational education They transformed it from a cooling out to a heating up of class expectations The result has been a culture of hyperindividualism The hyperindividual lives in a world permeated with against all odds plots from beat the odds of long supermarket checkout lines by using self checkout and buying FasTrak transponders to beat the odds of traffic jams to the endless superheroes on film and TV who daily save various sorts of planets and things against all odds Of course a few people can beat the odds only if most other people do not As choice begins to replace the selling of individual labor at the core of contemporary class formation the result is a sort of waste labor left behind by the competitive process Provocatively Watkins argues that in the twenty first century academic work in the humanities is assuming the management function of reclaiming this waste labor as a motor force for the future
