Organolithiums: Selectivity for Synthesis Jonathan Clayden,2002-07-12 This volume number 23 in the Tetrahedron Organic Chemistry series presents organolithium chemistry from the perspective of a synthetic organic chemist drawing from the synthetic literature to present a unified overview of how organolithiums can be used to make molecules The development of methods for the regioselective synthesis of organolithiums has replaced their image of indiscriminate high reactivity with one of controllable and subtle selectivity Organolithium chemistry has a central role in the selective construction of C C bonds in both simple and complex molecules and for example has arguably overtaken aromatic electrophilic substitution as the most powerful method for regioselective functionalisation of aromatic rings The twin themes of reactivity and selectivity run through the book which reviews the ways by which organolithiums may be formed and the ways in which they react Topics include advances in directed metallation reductive lithiation and organolithium cyclisation reactions along with a discussion of organolithium stereochemistry and the role played by ligands such as sparteine

Foundations of Statistics for Data Scientists Alan Agresti, Maria Kateri, 2021-11-29 Foundations of Statistics for Data Scientists With R and Python is designed as a textbook for a one or two term introduction to mathematical statistics for students training to become data scientists It is an in depth presentation of the topics in statistical science with which any data scientist should be familiar including probability distributions descriptive and inferential statistical methods and linear modeling The book assumes knowledge of basic calculus so the presentation can focus on why it works as well as how to do it Compared to traditional mathematical statistics textbooks however the book has less emphasis on probability theory and more emphasis on using software to implement statistical methods and to conduct simulations to illustrate key concepts All statistical analyses in the book use R software with an appendix showing the same analyses with Python Key Features Shows the elements of statistical science that are important for students who plan to become data scientists Includes Bayesian and regularized fitting of models e g showing an example using the lasso classification and clustering and implementing methods

with modern software R and Python Contains nearly 500 exercises The book also introduces modern topics that do not normally appear in mathematical statistics texts but are highly relevant for data scientists such as Bayesian inference generalized linear models for non normal responses e g logistic regression and Poisson loglinear models and regularized model fitting The nearly 500 exercises are grouped into Data Analysis and Applications and Methods and Concepts Appendices introduce R and Python and contain solutions for odd numbered exercises The book's website <http://stat4ds.rwth-aachen.de> has expanded R Python and Matlab appendices and all data sets from the examples and exercises
