Hemlin, Carl Martin Allwood, Ben Martin, Michael D. Mumford, 2014-03-14 Leadership is vital to creativity and successful innovation in groups and organizations leadership is however seldom studied in the academic literature as a creativity driver One reason for the lack of attention paid to leadership's effect on creativity may be the common belief that creativity cannot and should not be managed Creative individuals and groups are regarded as and indeed often are autonomous and self-driving From this belief the erroneous conclusion is drawn that there is no need for leadership in creative environments and situations The better conclusion proposed by this book is that leadership not only stimulates creativity but that such a leadership in the science technology and innovation fields should specifically possess at least two features a expertise in the field's and b an ability to create support and encourage individuals groups and creative knowledge environments A number of specialist authors in this volume offer original theoretical empirical and applied chapters that elucidate how to better organize and lead creative efforts in science technology and innovation A number of important research questions are raised and answered including What kinds of leaderships are needed at different levels of S T organizations for a creative output What social and cognitive abilities and skills are needed for leadership in creative environments How does leadership vary with different phases of the creative process This book offers concrete analysis of how leaders and managers can facilitate promote and organize for creative performance in science technology and in innovating organizations making it required reading for academic and industrial research leaders scientists and engineers

Implementation of an Enterprise Resource Planning System with Focus on End-User Training Elke Simon, 1999-11-24 Inhaltsangabe Abstract The implementation of an Enterprise Resource Planning ERP system refers to Information Systems Business Processes and People Basically it is a changing procedure in organizations that strive for company wide high performance Business Process Transformation is about changing a company's focus from products to customers Information Systems are replaced by a homogenous system environment which integrates all information into a common system The behaviour and skills of the company wide personnel are adapted to perform in the new world The big challenge of the implementation is to have the properly trained people for a high performance organization Unfortunately most companies do not recognize that need They underestimate the impact that the human factor has on an ERP approach they consider the implementation as a software installation with influence to the business But the implementation is much more complex This thesis is dedicated to all those persons who intend to implement an Enterprise Resource Planning system and who want to understand the theory of Business Process Transformation and how it is linked to Enterprise Resource Planning To emphasize the importance of the human factors within the implementation chapter 4 elaborates on End User Training as a significant part of an
