**Abstract** This paper introduces the way to design exercises to determine the structural formula of organic compounds based on the experimental data. They are structure, physical properties, typical chemical properties, synthesis methods and application. From that the authors have built the scheme to design exercises. On that basis, the authors compiled some exercises which are used for teaching and learning organic chemistry in university and high school.

**Keywords:** *designing exercise, structural formula, organic compound, experimental data, teaching and learning organic chemistry, mechanisms of reactions*

## 1. Introduction

Designing exercises is essential in teaching chemistry, an indispensable activity of chemistry teacher at the universities and high schools. Organic chemistry exercises have more interesting contents, special exercises for identified structural formula of organic compounds will require students to have a basic knowledge of organic chemistry such as stereochemistry, reaction mechanisms or organic synthesis, etc [1].

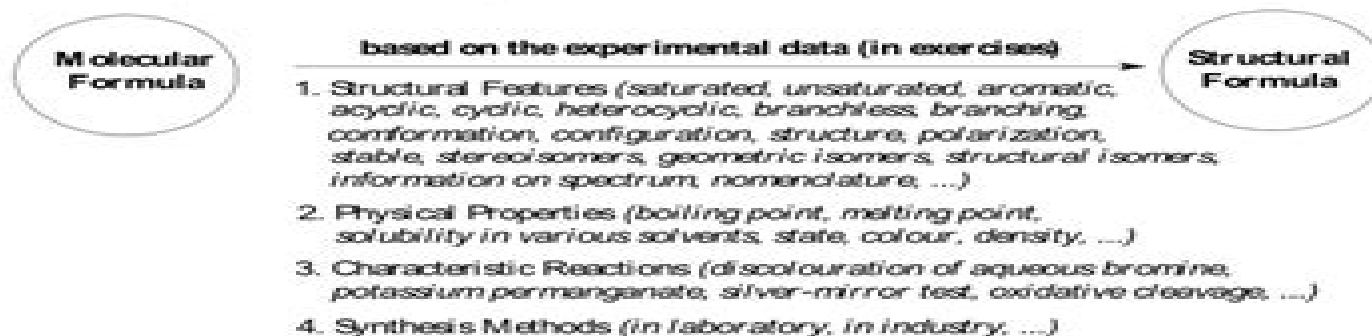

Exploiting the experimental data to determine the structure of organic compounds are important skills to help students practice on scientific research in the university. Solving this exercises will help students to

form experimental thinking in teaching of chemistry and research of organic chemistry.

## 2. Method – Designing Exercises

In order to determine the structural formula of organic compounds must first identify the components of qualitative and quantitative elements present in organic compounds, mean that molecular formula. Since it is based on experimental data on the molecular structure, chemical and physical properties of organic compounds and synthetic methods, we can argue to determine correctly structural formula of the organic compounds [2].

General scheme to design exercises as shown below.

## **Spectral Exercises In Structural Determination Of Organic Compounds:**

**Spectral Exercises in Structural Determination of Organic Compounds** Robert H. Shapiro, 1969 For undergraduate students

**Structure Determination By Spectroscopic Methods** Raul SanMartin, Maria Teresa Herrero, 2020-11-26 The authors travel with the reader through the challenging maze of structure determination showing how to distinguish between valuable and deceiving data from IR NMR and MS spectra extracting structural conclusions and putting all the pieces together to solve the structure elucidation puzzle Indeed human reasoning is key to combining the information contained in those bands signals and peaks by a rationale that enables the makeup of a chemical structure A number of increasingly more complex problems will act as trip segments and in addition to the spectra themselves each chapter is supplemented with figures and tables that decipher the above data and serve as maps for the journey
