progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Metabolomics and Transcriptomics in Biomarker Discovery: Mass Spectrometric Techniques in Volatilome Research Andras Szeitz, Konstantinos Andreas Kouremenos, Steven Hallam, Jens Herbig, Shane Peter Fitzgerald, 2025-01-30 Metabolites are generated in part during catabolism when the consumed sources of energy undergo biotransformation energy and metabolites are produced and the latter eliminated from the body Volatile organic compounds VOCs semi VOCs SVOCs etc can be representatives of the metabolic processes but also can be generated in pathologic conditions of organisms as signaling agents that transmit potential etiologic information on the disease states of the host With recent advances in molecular biology and diagnostics new forms of interdisciplinary science link VOC and SVOC production with genome transcriptomic and proteomic data sets and through biomarker discovery translation and validation coupled with the latest advances in mass spectrometry they contribute significantly to the emerging area called volatilome research Volatilome research emerges in part from the awareness that organisms emit biomarker VOCs representative of their physiological state stress conditions etc and on the mediating interactions between the host and the environment For example human and animal breath contains a vast number of VOCs that translate information about their health and in case of plants VOCs can be released in response to an external trigger such as temperature or osmotic stress herbivore perturbations etc Plant foliar VOCs contribute to potential application in crop stress response defense and enhanced biomass production which offers a renewable feedstock for sustainable energy and materials production within a biorefining context Multi omics is a valuable tool to investigate the processes involved in the fate of VOCs and their use as potential biomarkers in the inter species microbiome utilizing the latest technologies in analytical chemistry such as multidimensional gas or ultra high performance liquid chromatography coupled with high resolution mass spectrometry
