Introduction to Audio Processing Mads G. Christensen, 2019-03-30 This textbook presents an introduction to signal processing for audio applications The author s approach posits that math is at the heart of audio processing and that it should not be simplified He thus retains math as the core of signal processing and includes concepts of difference equations convolution and the Fourier Transform Each of these is presented in a context where they make sense to the student and can readily be applied to build artifacts Each chapter in the book builds on the previous ones building a linear coherent story The book starts with a definition of sound and goes on to discuss digital audio signals filters The Fourier Transform audio effects spatial effects audio equalizers dynamic range control and pitch estimation The exercises in each chapter cover the application of the concepts to audio signals The exercises are made specifically for Pure Data Pd although traditional software such as MATLAB can be used The book is intended for students in media technology bachelor programs The book is based on material the author developed teaching on the topic over a number of years

Speech and Audio Processing in Adverse Environments Eberhard Hänsler, Gerhard Schmidt, 2010-11-25 Users of signal processing systems are never satisfied with the system they currently use They are constantly asking for higher quality faster performance more comfort and lower prices Researchers and developers should be appreciative for this attitude It justifies their constant effort for improved systems Better knowledge about biological and physical interrelations coming along with more powerful technologies are their engines on the endless road to perfect systems This book is an impressive image of this process After Acoustic Echo 1 and Noise

Control published in 2004 many new results lead to Topics in 2 Acoustic Echo and Noise Control edited in 2006 Today in 2008 even more new findings and systems could be collected in this book Comparing the contributions in both edited volumes progress in knowledge and technology becomes clearly visible Blind methods and multi-input systems replace the low complexity systems The functionality of new systems is less and less limited by the processing power available under economic constraints The editors have to thank all the authors for their contributions They cooperated readily in our effort to unify the layout of the chapters the terminology and the symbols used It was a pleasure to work with all of them Furthermore it is the editors concern to thank Christoph Baumann and the Springer Publishing Company for the encouragement and help in publishing this book
