Speech Analysis:

Expression in Speech Mark Tatham, Katherine Morton, 2003-10-16 This book is about the nature of expression in speech. It is a comprehensive exploration of how such expression is produced and understood and of how the emotional content of spoken words may be analysed, modelled, tested and synthesized. Listeners can interpret tone of voice, assess emotional pitch and effortlessly detect the finest modulations of speaker attitude, yet these processes present almost intractable difficulties to the researchers seeking to identify and understand them. In seeking to explain the production and perception of emotive content, Mark Tatham and Katherine Morton review the potential of biological and cognitive models. They examine how the features that make up the speech production and perception systems have been studied by biologists, psychologists and linguists and assess how far biological, behavioural and linguistic models generate hypotheses that provide insights into the nature of expressive speech. The authors use recent techniques in speech synthesis and automatic speech recognition as a test bed for models of expression in speech. Acknowledging that such testing presupposes a comprehensive computational model of speech production, they put forward original proposals for its foundations and show how the relevant data structures may be modelled within its framework. This pioneering book will be of central interest to researchers in linguistics and in speech science, pathology and technology. It will also be valuable for behavioural and cognitive scientists wanting to know more about this vital and elusive aspect of human behaviour.

Speech and Audio Processing Ian Vince

McLoughlin, 2016-07-21 With this comprehensive and accessible introduction to the field, you will gain all the skills and knowledge needed to work with current and future audio speech and hearing processing technologies. Topics covered include mobile telephony, human computer interfacing through speech, medical applications of speech and hearing technology, electronic music, audio compression and reproduction, big data audio systems and the analysis of sounds in the environment. All of this is supported by numerous practical illustrations, exercises and hands-on MATLAB examples on topics as diverse as psychoacoustics, including some auditory illusions, voice changers, speech compression, signal analysis and visualisation, stereo processing, low frequency ultrasonic scanning and machine learning techniques for big data. With its pragmatic and application-driven focus and concise explanations, this is an essential resource for anyone who wants to rapidly gain a practical understanding of speech and audio processing and technology.

The Acoustic Analysis of Speech Raymond D.

Kent, Charles Read, 1992 Often cited as the most important human faculty, speech remains the focus of intensive study by specialists in such diverse fields as linguistics, psychology, physiology, engineering, computer science, speech pathology and neurology.

is receiving growing interest from both the academic and industrial communities. On one hand, recent scientific developments on cognition, on affect, emotion, on multimodal interfaces and on multimedia have opened new perspectives on the integration of more sophisticated models of gesture in computer systems. On the other hand, the consolidation of new technologies enabling disappearing computers and multimodal interfaces to be integrated into the natural environments of users are making it realistic to consider tackling the complex meaning and subtleties of human gesture in multimedia systems, enabling a deeper user-centered, enhanced physical participation and experience in the human-machine interaction process. The research programs supported by the European Commission and several national institutions and governments individuated in recent years' strategic fields strictly concerned with gesture research. For example, the DG Information Society of the European Commission www.cordis.lu lists supports several initiatives such as the Disappearing Computer and Presence EU IST FET Future and Emerging Technologies, the IST program Interfaces Enhanced Audio Visual Services (see for example the project MEGA Multisensory Expressive Gesture Applications www.megaproject.org) and the IST strategic project Multimodal Interfaces. Several EC projects and other funded research are represented in the chapters of this book.

A wider range of applications can benefit from advances in research on gesture from consolidated areas such as surveillance to new or emerging fields such as therapy and rehabilitation, home consumer goods, entertainment and audio-visual, cultural and artistic applications, just to mention only a few of them.
