Kyllingsbæk,Signe Allerup Vangkilde,Claus Bundesen,2015-09-02 The Neural Theory of Visual Attention of Bundesen Habekost and Kyllingsbæk 2005 was proposed as a neural interpretation of Bundesen s 1990 theory of visual attention TVA In NTVA visual attention functions via two mechanisms by dynamic remapping of receptive fields of cortical cells such that more cells are devoted to behaviorally important objects than to less important ones filtering and by multiplicative scaling of the level of activation in cells coding for particular features pigeonholing NTVA accounts for a wide range of known attentional effects in human performance and a wide range of effects observed in firing rates of single cells in the primate visual system and thus provides a mathematical framework to unify the 2 fields of research In this Research Topic of Frontiers in Psychology some of the leading theories of visual attention at both the cognitive neuropsychological and neurophysiological levels are presented and evaluated In addition the Research Topic encompasses application of the framework of NTVA to various patient populations and to neuroimaging as well as genetic and psychopharmacological studies **School Life** ,1960 **Successful Training in Gastrointestinal Endoscopy** Jonathan Cohen,2022-04-19

contributions about the role of tES in discovering and mapping the neuro functional correlates of higher cognitive functions are also included The common background of the contributions included in the eBook lies in the idea that we need sound scientific evidence about how to move these techniques from labs to real life contexts Addressing these issues and understanding the real potentialities of tES in clinical and non clinical applications require a significant cross fertilization between disciplines We hope this eBook will be able to boost the discussion on this vital topic
