## Ten Lectures On Random Media Oberwolfach Seminars:

Ten Lectures on Random Media Erwin Bolthausen, Alain-Sol Sznitman, 2002-03-01      *Ten Lectures on Random Media* Erwin Bolthausen, Alain-Sol Sznitman, 2012-12-06 The following notes grew out of lectures held during the DMV Seminar on Random Media in November 1999 at the Mathematics Research Institute of Oberwolfach and in February March 2000 at the Ecole Normale Supérieure in Paris In both places the atmosphere was very friendly and stimulating The positive response of the audience was encouragement enough to write up these notes I hope they will carry over the enjoyment of the live lectures I wholeheartedly wish to thank Profs Matthias Kreck and Jean-François Le Gall who were responsible for these two very enjoyable visits Laurent Miclo for his comments on an earlier version of these notes and last but not least Erwin Bolthausen who was my accomplice during the DMV Seminar A Brief Introduction The main theme of this series of lectures are Random motions in random media The subject gathers a variety of probabilistic models often originated from physical sciences such as solid state physics physical chemistry oceanography biophysics in which typically some diffusion mechanism takes place in an inhomogeneous medium Randomness appears at two levels It comes in the description of the motion of the particle diffusing in the medium this is a rather traditional point of view for probability theory but it also comes in the very description of the medium in which the diffusion takes place      **Correlated Random Systems: Five Different Methods**

Véronique Gayraud, Nicola Kistler, 2015-06-09 This volume presents five different methods recently developed to tackle the large scale behavior of highly correlated random systems such as spin glasses random polymers local times and loop soups and random matrices These methods presented in a series of lectures delivered within the Jean Morlet initiative Spring 2013 play a fundamental role in the current development of probability theory and statistical mechanics The lectures were Random Polymers by E Bolthausen Spontaneous Replica Symmetry Breaking and Interpolation Methods by F Guerra Derrida s Random Energy Models by N Kistler Isomorphism Theorems by J Rosen and Spectral Properties of Wigner Matrices by B Schlein This book is the first in a co-edition between the Jean Morlet Chair at CIRM and the Springer Lecture Notes in Mathematics which aims to collect together courses and lectures on cutting edge subjects given during the term of the Jean Morlet Chair as well as new material produced in its wake It is targeted at researchers in particular PhD students and postdocs working in probability theory and statistical physics      *The Mathematics of the Bose Gas and its Condensation*

Elliott H. Lieb, Robert Seiringer, Jan Philip Solovej, Jakob Yngvason, 2005-06-16 This book contains a unique survey of the mathematically rigorous results about the quantum mechanical many body problem that have been obtained by the authors in the past seven years It addresses a topic that is not only rich mathematically using a large variety of techniques in mathematical analysis but is also one with strong ties to current experiments on ultra cold Bose gases and Bose Einstein condensation The book provides a pedagogical entry into an active area of ongoing research for both graduate students and researchers It is an outgrowth of a course given by the authors for graduate students and post doctoral researchers at the

Oberwolfach Research Institute in 2004 The book also provides a coherent summary of the field and a reference for mathematicians and physicists active in research on quantum mechanics      *Singular Sets of Minimizers for the Mumford-Shah Functional* Guy David, 2005-03-22 The Mumford Shah functional was introduced in the 1980s as a tool for automatic image segmentation but its study gave rise to many interesting questions of analysis and geometric measure theory The main object under scrutiny is a free boundary  $K$  where the minimizer may have jumps The book presents an extensive description of the known regularity properties of the singular sets  $K$  and the techniques to get them It is largely self contained and should be accessible to graduate students in analysis The core of the book is composed of regularity results that were proved in the last ten years and which are presented in a more detailed and unified way      **The Novikov Conjecture** Matthias Kreck, Wolfgang Lück, 2004-11-22 These lecture notes contain a guided tour to the Novikov Conjecture and related conjectures due to Baum Connes Borel and Farrell Jones They begin with basics about higher signatures Whitehead torsion and the s Cobordism Theorem Then an introduction to surgery theory and a version of the assembly map is presented Using the solution of the Novikov conjecture for special groups some applications to the classification of low dimensional manifolds are given      **Invariant Probabilities of Markov-Feller Operators and Their Supports** Radu Zaharopol, 2005-01-28 This book covers invariant probabilities for a large class of discrete time homogeneous Markov processes known as Feller processes These Feller processes appear in the study of iterated function systems with probabilities convolution operators and certain time series From the reviews A very useful reference for researchers wishing to enter the area of stationary Markov processes both from a probabilistic and a dynamical point of view MONATSHEFTE F R MATHEMATIK      Growth Theory of Subharmonic Functions Vladimir S. Azarin, 2008-10-20 In this book an account of the growth theory of subharmonic functions is given which is directed towards its applications to entire functions of one and several complex variables The presentation aims at converting the noble art of constructing an entire function with prescribed asymptotic behaviour to a handicraft For this one should only construct the limit set that describes the asymptotic behaviour of the entire function All necessary material is developed within the book hence it will be most useful as a reference book for the construction of entire functions      *Mathematical Reviews* ,2004      **Forthcoming Books** Rose Arny, 1994-02      Subject Guide to Books in Print ,1993      *Random Media* ,2003
