Smith,Samuel Y. Appiah,2021-02-26 As

an industrial process construction is unique The procurement processes used to achieve the successful completion of built assets requires a different approach to that adopted in most other industries due to the design of buildings being bespoke and the sites being geographically varied The procurement process is central to the success of any construction project and many of the problems which impact construction projects can be traced back to the procurement phase so a good understanding of the methods of procurement the development of a procurement strategy and the influence it has on project success is essential for all those working in the industry Much has changed in the global construction industry since publication of the second edition of Building Procurement for example the increase in debt burden of many major economies widespread adoption of Building Information Modelling BIM Technology in the industry and the United Kingdom's exit from

the European Union This new edition has been rewritten to take account of these significant developments but at its core it continues to provide a critical examination and review of current procurement practices in the UK continental Europe including EU procurement procedures China Middle East and Sub Saharan Africa and the USA It retains its original strong emphasis on the need for clients to establish achievable objectives which reflect the project business case and focuses on development of suitable strategies and management structures to meet those objectives in the current construction climate Building Procurement will be essential reading for senior undergraduate and postgraduate students of construction management and practitioners working in all areas of construction management

Code of Practice for the Selection of Subcontractors Construction Industry Board (Great Britain). Working Group 3,1997 This code of practice is one of a set of documents from the CIB aimed at improving the quality effectiveness and efficiency of the construction industry It should be used in conjunction with the other documents in the series 1 The good practice recommended should be observed in commercial relationships throughout the contractual chain and throughout the duration of a construction project Subcontractors can be selected by competitive tendering by negotiation or as a result of partnering or a joint venture arrangement Competitive tendering is complex and requires everyone involved to follow a common set of procedures inevitably it occupies the bulk of this code In competitive tendering for small or simple works all the steps described are required but many may take place formally and these are indicated by dotted lines in the diagrams which accompany each section of the code Negotiation partnering or joint ventures should all be carried out in the same spirit of good practice although specific procedures will vary For competitive tendering to be effective in providing good value for money it must be seen to be fair and the processes by which decisions are reached must be as open as possible This applies to all forms of subcontractor selection
