In a time of recession the challenge of building and planning for tall buildings has become even more complex the economics of development legislative and planning frameworks and the local politics of development must be navigated by those wishing to design and construct new tall buildings which fit within the fabric of their host cities This book is a timely contribution to the debate about new tall buildings and their role and effect on our cities It is divided into two main parts In part one the relationship between tall buildings and planning is outlined followed by an exploration of the impacts that construction of tall buildings can have It focuses in particular on the conservation debates that proposals for new tall buildings raise The first part ends with an analysis of the way in which planning strategies have evolved to deal with the unique consequences of tall buildings on their urban locations The second part of the book focuses on seven examples of medium sized cities dealing with planning and conservation issues and implications that arise from tall buildings These have been chosen to reflect a wide range of methods to either encourage or to control tall buildings that cities are deploying The

case studies come from across the western world covering England Manchester Liverpool Newcastle and Birmingham Norway Oslo Ireland Dublin and Canada Vancouver and represent a broad spectrum of approaches to dealing with this issue In drawing together the experiences of these varied cities the book contributes to the ongoing debate about the role of the tall building in our cities their potential impacts and experiences of those who use and inhabit them The conclusions outline how cities should approach the strategic planning of tall buildings as well as how they should deal with the consequences of individual buildings particularly on the built heritage

New Urban Housing Hilary French, 2006-01-01

A timely investigation of the most innovative recent urban housing constructions The design of high density housing is inextricably linked to the growth of

towns and cities as urban centers have increased in both geographical size and density housing has had to be provided to accommodate the numbers and needs of the population Whether highly visible or merged with the existing cityscape a vast proportion of the fabric of any city is made up of residential space New Urban Housing looks at a selection of some of the most inventive contemporary projects built in countries around the world Author Hilary French provides a comprehensive introduction to this building type from its industrial beginnings in London and Paris to New York City s Lower East Side and the 20th century designs of Le Corbusier Antonio Sant Elia and Mies van der Rohe Lavishly illustrated the book examines different formal typologies of urban housing terrace and row houses quadrangles and courtyards city blocks and infill or renovated and reused sites and towers and slab blocks Thirty six case studies from fourteen countries are presented by architects including Steven Holl Richard Meier KoningEizenbergArchitecture Eduardo Souto de Moura and Renzo Piano Each is illustrated in full color and is accompanied by detailed plans and sections that discuss the needs of the site and place the project in its surrounding context New Urban Housing features these buildings and more Contemporaine Chicago Donnybrook Quarter London Harold Way Apartments Hollywood Mondrian Apartments Sydney Simmons Hall MIT Cambridge MA Yerba Buena Lofts San Francisco Understanding Tall Buildings Kheir Al-Kodmany,2017-02-17 In recent years the rapid pace of tall building construction has fostered a certain kind of placelessness with many new tall buildings being built out of scale context and place By analyzing hundreds of tall buildings and by providing hundreds of visuals that inspire stimulate and engage Understanding Tall Buildings contends that well designed tall buildings can rejuvenate cities ignite economic activity support social life and boost city pride Although this book does not claim to possess all the solutions it does propose specific tall building design guidelines that may help to promote placemaking Through this work it is the author s hope that ill conceived developments will become less common in the future and that good placemaking will become the norm not the exception This book is a must read for students and practitioners working to create better tall buildings and better urban environments *Eco-Towers* K. serve tenants mitigate environmental impacts and improve integration with the city infrastructure It explains how skyscrapers long life cycle offers the greatest justifications for recycling precious resources and makes it a worthwhile to employ green features in constructing new skyscrapers and retrofitting existing ones Subsequently the book explores new designs that are employing cutting edge green technologies at a grand scale including water saving technologies solar panels helical wind turbines sunlight sensing LED lights rainwater catchment systems graywater and blackwater recycling systems seawater powered air conditioning and the like In the future new building materials and smart technologies will continue to offer innovative design approaches to sustainable tall buildings with new aesthetics referred to as eco iconic skyscrapers

The extended self Chris Abel,2016-10-28 In this wide ranging study of architecture and cultural evolution the author argues that underlying the global environmental crisis is a general resistance to changing personal and social identities shaped by a technology based culture and its energy hungry products The book traces the roots of that culture to the coevolution of Homo sapiens and technology from the first use of tools as artificial extensions of the human body to the motorised cities spreading around the world whose uncontrolled effects are changing the planet itself Advancing a new concept of the meme called the technical meme as the primary agent of cognitive extension and technical embodiment the author proposes a theory of the extended self encompassing material and spatial as well as psychological and social elements Drawing upon research from philosophy psychology and the neurosciences the book presents a new approach to environmental and cultural studies that will appeal to a broad readership searching for insights into the crisis
