Spyrou, Frans van Walree, Marcelo Almeida Santos Neves, Naoya Umeda, 2019-01-01 This book contains a selection of research papers presented at the 11th and 12th International Ship Stability Workshops Wageningen 2010 and Washington DC 2011 and the 11th International Conference on Stability of Ships and Ocean Vehicles Athens 2012 The book is directed toward the ship stability community and presents innovative ideas concerning the understanding of the physical nature of stability failures and methodologies for assessing ship stability Particular interest of the readership is expected in relation with appearance of new and unconventional types of ships assessment of stability of these ships cannot rely on the existing experience and has to be based on the first principles As the complexity of the physical processes responsible for stability failure have increasingly made time domain numerical simulation the main tool for stability assessment particular emphasis is made on the development an application of such tools The included papers have been selected by the editorial committee and have gone

through an additional review process with at least two reviewers allocated for each Many of the papers have been significantly updated or expanded from their original version in order to best reflect the state of knowledge concerning stability at the time of the book's publication The book consists of four parts Mathematical Model of Ship Motions in Waves Dynamics of Large Motions Experimental Research and Requirements Regulations and Operations **Rogue Waves 2000**

Risk-Based Ship Design Apostolos Papanikolaou, 2009-04-09 Risk based ship design is a new scientific and engineering field of growing interest to researchers, engineers and professionals from various disciplines related to ship design, construction, operation and regulation. The main motivation to use risk based approaches is twofold: implement a novel ship design which is considered safe but for some formal regulatory reason cannot be approved today; and/or rationally optimize an existing design with respect to safety without compromising on efficiency and performance. It is a clear direction that all future technological and regulatory International Maritime Organisation developments regarding ship design and operation will go through risk based procedures which are known and well established in other industries e.g. nuclear, aviation. The present book derives from the knowledge gained in the course of the project SAFEDOR Design, Operation and Regulation for Safety an Integrated Project under the 6th framework programme of the European Commission IP 516278. The book aims to provide an understanding of the fundamentals and details of the integration of risk based approaches into the ship design process. The book facilitates the transfer of knowledge from recent research work to the wider maritime community and advances scientific approaches dealing with risk based design and ship safety Parametric Resonance in Dynamical Systems Thor I. Fossen, Henk Nijmeijer, 2011-12-14 Parametric Resonance in Dynamical Systems discusses the phenomenon of parametric resonance and its occurrence in mechanical systems vehicles, motorcycles, aircraft and marine craft along micro electro mechanical systems. The contributors provide an introduction to the root causes of this phenomenon and its mathematical equivalent the Mathieu-Hill equation. Also included is a discussion of how parametric resonance occurs on ships and offshore systems and its frequency in mechanical and electrical systems. This volume is ideal for researchers and mechanical engineers working in application fields such as MEMS, maritime, aircraft and ground vehicle engineering **The Engineering Index**, 1921 Safety and Reliability: Methodology and Applications Tomasz Nowakowski, Marek Mlynaczak, Anna Jodejko-Pietruszuk, Sylwia Werbinska-Wojciechowska, 2014-09-01 Within the last fifty years the performance
