Stability Theory Hurwitz Centenary Conference Centro Stefano Franscini Ascona 1995 International Series Of Numerical Mathematics:

Stability Theory Rolf Jeltsch, Mohamed Mansour, 2012-12-06 This book contains the historical development of the seminal paper of Adolf Hurwitz professor in mathematics at ETH 1892 1919 and its impact on other fields The major emphasis however is on modern results in stability theory and its application in the theory of control and numerics In particular stability of the following problems is treated linear nonlinear and time dependent systems discretizations of ordinary and partial differential equations systems with time delay on multidimensional systems In addition robust stability pole placement and problems related to the stability radius are treated The book is an outgrowth of the international conference Centennial Hurwitz on Stability Theory which was held to honor Adolf Hurwitz whose article on the location of roots of a polynomial was published one hundred years ago The conference took place at the Centro Stefano Franscini Monte Verita Ascona Switzerland on May 21 26 1995 This book contains a collection of the papers and open problems discussed all that occasion Leading researchers from all over the world working on stability theory and its application were invited to present their recent results In one paper the historic development initiated by Hurwitz's article was discussed *Domain Decomposition Methods in Optimal Control of Partial Differential Equations* John E. Lagnese, Günter Leugering, 2012-12-06 This monograph considers problems of optimal control for partial differential equations of elliptic and more importantly of hyperbolic types on networked domains The main goal is to describe develop and analyze iterative space and time domain decompositions of such problems on the infinite dimensional level While domain decomposition methods have a long history dating back well over one hundred years it is only during the last decade that they have become a major tool in numerical analysis of partial differential equations A keyword in this context is parallelism This development is perhaps best illustrated by the fact that we just encountered the 15th annual conference precisely on this topic Without attempting to provide a complete list of introductory references let us just mention the monograph by Quarteroni and Valli 91 as a general up to date reference on domain decomposition methods for partial differential equations The emphasis of this monograph is to put domain decomposition methods in the context of so called virtual optimal control problems and more importantly to treat optimal control problems for partial differential equations and their decompositions by an all at once approach This means that we are mainly interested in decomposition techniques which can be interpreted as virtual optimal control problems and which together with the real control problem coming from an underlying application lead to a sequence of individual optimal control problems on the subdomains that are iteratively decoupled across the interfaces Multiscale Modeling in Epitaxial Growth Axel Voigt, 2005-04-20 Epitaxy is relevant for thin film growth and is a very active area of theoretical research since several years Recently powerful numerical techniques have been used to link atomistic effects at the film's surface to its macroscopic morphology This book also serves as an introduction into this highly active interdisciplinary field of research for

applied mathematicians theoretical physicists and computational materials scientists *Variational Calculus, Optimal Control and Applications* Leonhard Bittner, Roland Bulirsch, Knut Heier, Werner Schmidt, 2012-12-06 The 12th conference on Variational Calculus Optimal Control and Applications took place September 23-27 1996 in Trassenheide on the Baltic Sea island of Usedom Seventy mathematicians from ten countries participated The preceding eleven conferences too were held in places of natural beauty throughout West Pomerania the first time in 1972 in Zinnowitz which is in the immediate area of Trassenheide The conferences were founded and led ten times by Professor Bittner Greifswald and Professor Klotzler Leipzig who both celebrated their 65th birthdays in 1996 The 12th conference in Trassenheide was therefore also dedicated to L Bittner and R Klotzler Both scientists made a lasting impression on control theory in the former GDR Originally the conferences served to promote the exchange of research results In the first years most of the lectures were theoretical but in the last few conferences practical applications have been given more attention Besides their pioneering theoretical works both honorees have also always dealt with applications problems L Bittner has for example examined optimal control of nuclear reactors and associated safety aspects Since 1992 he has been working on applications in optimal control in flight dynamics R Klotzler recently applied his results on optimal autobahn planning to the south tangent in Leipzig The contributions published in these proceedings reflect the trend to practical problems starting points are often questions from flight dynamics

Multivariate Approximation and Splines Günther Nürnberger, Jochen W. Schmidt, Guido Walz, 2012-12-06 This book contains the refereed papers which were presented at the international conference on Multivariate Approximation and Splines held in Mannheim Germany on September 7-10 1996 Fifty experts from Bulgaria England France Israel Netherlands Norway Poland Switzerland Ukraine USA and Germany participated in the symposium It was the aim of the conference to give an overview of recent developments in multivariate approximation with special emphasis on spline methods The field is characterized by rapidly developing branches such as approximation data fitting interpolation splines radial basis functions neural networks computer aided design methods subdivision algorithms and wavelets The research has applications in areas like industrial production visualization pattern recognition image and signal processing cognitive systems and modeling in geology physics biology and medicine In the following we briefly describe the contents of the papers Exact inequalities of Kolmogorov type which estimate the derivatives of multivariate periodic functions are derived in PICHUGOV These inequalities are applied to the approximation of classes of multivariate periodic functions and to the approximation by quasi polynomials BAINOV DISHLIEV and HRISTOVA investigate initial value problems for non linear impulse differential difference equations which have many applications in simulating real processes By applying iterative techniques sequences of lower and upper solutions are constructed which converge to a solution of the initial value problem Subject Guide to Books in Print, 1991 **American Book Publishing Record**, 1996 *Forthcoming Books* Rose Army, 1997 Das Schweizer Buch, 1997 *Satzungen und*
