P. Shil'nikov, 2001 Bifurcation and chaos has dominated research in nonlinear dynamics for over two decades and numerous introductory and advanced books have been published on this subject There remains however a dire need for a textbook which provides a pedagogically appealing yet rigorous mathematical bridge between these two disparate levels of exposition This book has been written to serve that unfulfilled need Following the footsteps of Poincaré and the renowned Andronov school of nonlinear oscillations this book focuses on the qualitative study of high dimensional nonlinear dynamical systems Many of the qualitative methods and tools presented in the book have been developed only recently and have not yet appeared in textbook form In keeping with the self contained nature of the book all the topics are developed with introductory background and complete mathematical rigor Generously illustrated and written at a high level of exposition this invaluable book will appeal to both the beginner and the advanced student of nonlinear dynamics interested in learning a rigorous mathematical foundation of this fascinating subject Sample Chapter s Introduction to Part II 124 KB Chapter 7 1 Rough systems on a plane Andronov Pontryagin theorem 218 KB Chapter 7 2 The set of center motions 158 KB Chapter 7 3 General classification of center motions 155 KB Chapter 7 4 Remarks on roughness of high order dynamical systems 136 KB Chapter 7 5 Morse Smale systems 435 KB Chapter 7 6 Some properties of Morse Smale systems 211 KB Contents Structurally Stable Systems Bifurcations of Dynamical Systems The Behavior of Dynamical Systems on Stability Boundaries of Equilibrium States The Behavior of Dynamical Systems on Stability Boundaries of Periodic Trajectories Local Bifurcations on the Route Over

Advanced Flight Dynamics with Elements of Flight Control Nandan K. Sinha,N. Ananthkrishnan,2017-06-27

Advanced Flight Dynamics aim to integrate the subjects of aircraft performance trim and stability control in a seamless manner Advanced Flight Dynamics highlights three key and unique viewpoints Firstly it follows the revised and corrected aerodynamic modeling presented previously in recent textbook on Elementary Flight Dynamics Secondly it uses bifurcation and continuation theory especially the Extended Bifurcation Analysis EBA procedure devised by the authors to blend the subjects of aircraft performance trim and stability and flight control into a unified whole Thirdly rather than select one control design tool or another it uses the generalized Nonlinear Dynamic Inversion NDI methodology to illustrate the fundamental principles of flight control Advanced Flight Dynamics covers all the standard airplane maneuvers various types of instabilities normally encountered in flight dynamics and illustrates them with real life airplane data and examples thus bridging the gap between the teaching of flight dynamics control theory in the university and its practice in airplane design bureaus The expected reader group for this book would ideally be senior undergraduate and graduate students practicing aerospace flight simulation engineers scientists from industry as well as researchers in various organizations Key Features Focus on unified nonlinear approach with nonlinear analysis tools Provides an up to date corrected and unified presentation of aircraft trim stability and control analysis including nonlinear phenomena and closed loop stability analysis Contains a computational tool and real life example carried through the chapters Includes complementary nonlinear dynamic inversion control approach with relevant aircraft examples Fills the gap in the market for a text including non linear flight dynamics and continuation
