Abstract: In this paper, we are concerned with approach solutions for Sturm–Liouville problems (SLP) using variational problem (VP) formulation of regular SLP. The minimization problem (MP) is also set forth, and the connection between the solution of each formulation is then proved. Variational estimations (the variational equation associated through the Euler–Lagrange variational principle and Nehari’s method, shooting method and bisection method) and iterative variational methods (He’s method and HPM) for regular RSL are unitary presented in final part of the paper, which ends with applications.

1. Introduction

Nonlinearities are different from linear type by a function, an operator or a system that is nonlinear or is the case in which only some characteristics of it are known. The existence of the solution and the dependence of conditions for solving some classes of differential equations described by an operator is specified by the general framework of the Sturm–Liouville problem, with parametric conditions at the limit. The general framework of the Sturm–Liouville problem with parametric conditions at the limit is specified in the first part of the paper. The existence of the solution and the dependence of conditions is specified through the connection between the differential operator and Green’s function. Based on the properties of Green’s function, the operator used to analyze the behavior of the solution of the parameters given by the boundary conditions is specified. Variational problems derived from the initial RSLP are outlined with different type conditions in order to estimate the solution.

Let be the operator $L = -\frac{d}{dx} \left[p(x) \frac{d}{dx} \right] + p(x)$ as part of the regular Sturm–Liouville problem (RSL). The Sturm–Liouville (SL) problem expressed by the differential equation and the boundary conditions

$$a(x) \frac{d^2 u}{dx^2} + b(x) \frac{du}{dx} + c(x)u - \lambda d(x)u = 0, \quad (1)$$

$$\begin{aligned} B_1 : & a_1 u(a) + a_2 u'(a) = 0, \quad |a_1| + |a_2| \neq 0, a_1, a_2 \in \mathbb{R}, \\ B_2 : & b_1 u(b) + b_2 u'(b) = 0, \quad |b_1| + |b_2| \neq 0, b_1, b_2 \in \mathbb{R} \end{aligned} \quad (2)$$

could be written as

$$Lu + \lambda s(x)u = 0, \quad x \in (a, b) = I, \lambda \in \mathbb{R} \quad (3)$$

Bakushinsky, Mikhail M. Kokurin, Mikhail Yu. Kokurin, 2018-02-05 This specialized and authoritative book contains an overview of modern approaches to constructing approximations to solutions of ill posed operator equations both linear and nonlinear These approximation schemes form a basis for implementable numerical algorithms for the stable solution of operator equations arising in contemporary mathematical modeling and in particular when solving inverse problems of mathematical physics The book presents in detail stable solution methods for ill posed problems using the methodology of iterative regularization of classical iterative schemes and the techniques of finite dimensional and finite difference approximations of the problems under study Special attention is paid to ill posed Cauchy problems for linear operator differential equations and to ill posed variational inequalities and optimization problems The readers are expected to have basic knowledge in functional analysis and differential equations The book will be of interest to applied mathematicians and specialists in mathematical modeling and inverse problems and also to advanced students in these fields Contents Introduction Regularization Methods For Linear Equations Finite Difference Methods Iterative Regularization Methods Finite Dimensional Iterative Processes Variational Inequalities and Optimization Problems Regularization Methods for Ill-Posed Optimal Control Problems Frank Pörner, 2018-10-04 Ill posed optimization problems appear in a wide range of mathematical

applications and their numerical solution requires the use of appropriate regularization techniques In order to understand these techniques a thorough analysis is inevitable The main subject of this book are quadratic optimal control problems subject to elliptic linear or semi linear partial differential equations Depending on the structure of the differential equation different regularization techniques are employed and their analysis leads to novel results such as rate of convergence estimates *Recent Advances in Optimization* Peter Gritzmann,Reiner Horst,Ekkehard Sachs,Rainer

Kokurin,2007-09-28 This volume presents a unified approach to constructing iterative methods for solving irregular operator equations and provides rigorous theoretical analysis for several classes of these methods The analysis of methods includes convergence theorems as well as necessary and sufficient conditions for their convergence at a given rate The principal groups of methods studied in the book are iterative processes based on the technique of universal linear approximations stable gradient type processes and methods of stable continuous approximations Compared to existing monographs and textbooks on ill posed problems the main distinguishing feature of the presented approach is that it doesn t require any structural conditions on equations under consideration except for standard smoothness conditions This allows to obtain in a uniform style stable iterative methods applicable to wide classes of nonlinear inverse problems Practical efficiency of suggested algorithms is illustrated in application to inverse problems of potential theory and acoustic scattering The volume can be read by anyone with a basic knowledge of functional analysis The book will be of interest to applied mathematicians and specialists in mathematical modeling and inverse problems Optimization Van Hien Nguyen,Jean-Jacques Strodiot,Patricia Tossings,2012-12-06 The

9th Belgian French German Conference on Optimization has been held in Namur Belgium on September 7 11 1998 This volume is a collection of papers presented at this Conference Originally this Conference was a French German Conference but this year in accordance with the organizers wishes a third country Belgium has joined the founding members of the Conference Hence the name Belgian French German Conference on Optimization Since the very beginning the purpose of these Conferences has been to bring together researchers working in the area of Optimization and partic ularly to encourage young researchers to present their work Most of the participants come from the organizing countries However the general ten dancy is to invite outside researchers to attend the meeting So this year among the 101 participants at this Conference twenty researchers came from other countries The general theme of the Conference is everything that concerns the area of Optimization without specification of particular topics So theoretical as pects of Optimization in addition to applications and

algorithms of Optimization will be developed However and this point was very important for the organizers the Conference must retain its convivial character No more than two parallel sessions are organized This would allow useful contacts between researchers to be promoted The editors express their sincere thanks to all those who took part in this Conference Their invaluable discussions have made this volume possible *Equilibrium Problems* Lam Quoc Anh, Phan Quoc Khanh, Nguyen Hong Quan, 2025-09-26 This book is a systematic and comprehensive exposition of the state of the art research results in the literature on equilibrium problems The book describes the highest level research and reflects a current picture of results in the literature on the three topics in a very central place of the general theory of equilibrium problems existence stability and approximation together with their particular cases and numerous applications It is intended to serve as both introductory and deep courses for graduate students or as useful materials for researchers studying aspects of optimization and equilibrium problems or more generally working on inter discipline such as mathematical economics operations research and management or even in various areas of science and technology In providing profound knowledge of recent research this book has advantages over existing recent books focused on equilibrium problems and variational relation problems and may also be suitable for readers preparing deep and comprehensive graduate courses Nonlinear Ill-posed Problems of Monotone Type Yakov Alber, Irina Ryazantseva, 2006-02-23 Interest in regularization methods for ill posed nonlinear operator equations and variational inequalities of monotone type in Hilbert and Banach spaces has grown rapidly over recent years Results in the field over the last three decades previously only available in journal articles are comprehensively explored with particular attention given to applications of regularization methods as well as to practical methods used in computational analysis **Encyclopedia of Optimization** Christodoulos A. Floudas, Panos M. Pardalos, 2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling **Regularization of Ill-Posed Problems by Iteration Methods** S.F. Gilyazov, N.L.
