FME '93: Industrial-Strength Formal Methods Jim Woodcock,James C.P. Woodcock,Peter G. Larsen,1993 The last few years have borne witness to a remarkable diversity of formal methods with applications to sequential and concurrent software to real time and reactive systems and to hardware design In that time many theoretical problems have been tackled and solved and many continue to be worked upon Yet it is by the suitability of their industrial application and the extent of their usage that formal methods will ultimately be judged This volume presents the proceedings of the first international symposium of Formal Methods Europe FME 93 The symposium focuses on the application of industrial strength formal methods Authors address the difficulties of scaling their techniques up to industrial sized problems and their suitability in the workplace and discuss techniques that are formal that is they have a mathematical basis and that are industrially applicable The volume has four parts Invited lectures containing a lecture by Cliff B Jones and a lecture by Antonio Cau and Willem Paul de Roever Industrial usage reports containing 6 reports Papers containing 32 selected and refereed papers Tool descriptions containing 11 descriptions **Advanced Information Systems Engineering** Klaus R. Dittrich,Andreas Geppert,Moiria C. Norrie,2003-05-15 Since the late 1980s the CAiSE conferences have provided a forum for the presentation and exchange of

research results and practical experiences within the field of Information Systems Engineering CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Interlaken located near the three famous Swiss mountains the Eiger Mönch and Jungfrau The first two days consisted of pre conference workshops and tutorials The workshop themes included requirements engineering evaluation of modeling methods data integration over the Web agent oriented information systems and the design and management of data warehouses Continuing the tradition of recent CAiSE conferences there was also a doctoral consortium The pre conference tutorials were on the themes of e business models and XML application development The main conference program included three invited speakers two tutorials and a panel discussion in addition to presentations of the papers in these proceedings We also included a special practice and experience session to give presenters an opportunity to report on and discuss experiences and investigations on the use of methods and technologies in practice We extend our thanks to the members of the program committee and all other referees without whom such conferences would not be possible The program committee whose members came from 20 different countries selected 27 high quality research papers and 3 experience reports from a total of 97 submissions The topics of these papers span the wide range of topics relevant to information systems engineering from requirements and design through to implementation and operation of complex and dynamic systems

Business Rule-Oriented Conceptual Modeling Holger Herbst, 2012-12-06 This book is based on a PhD dissertation which was accepted by the faculty of Law and Economics at the University of Bern Switzerland The ideas presented were partially developed in a research project founded by the Swiss National Science Foundation in 1993 and 1994 This research project was concerned with evaluating the application of database triggers and active databases for the implementation of business rules We recognized among other things the lack of a methodology for modeling such business rules on the conceptual level Therefore this became the focus of the follow up research which resulted in this book All this work would not have been possible without the help of several people First of all I would like to give special thanks to my thesis supervisor Prof Dr Gerhard Knolmayer He not only initiated the research project and found an industry partner but also provided very valuable ideas and critically reviewed and discussed the resulting publications Furthermore I would like to express my thanks to the second thesis supervisor Prof Dr Sham Navathe from Georgia Institute of Technology who influenced my work with results from a former research project and who agreed to evaluate the resulting PhD Dissertation

Data Modelling for Information Systems Carrie De Carteret, Richard Vidgen, 1995 This book explains the fundamentals of data modelling and its importance in the development of quality information systems The text illustrates how data modelling is applied in practice and includes detailed examples to show data structures which are encountered in systems development Describing the environment in which data modelling is performed such as administration and CASE the authors seek to clarify the similarities and differences between traditional data modelling and object oriented modelling and thus to provide a conceptual framework for the migration from one to the other A selection of illustrated physical implementations on different DBMSs are provided and the techniques of behavioural data modelling are demonstrated This is a higher level rather than introductory text aimed at final year students of a business information systems degree and those computer science degrees which address organizational management aspects of their specialism during the final year

GIS, Organisations and People James Petch, 2019-08-08 GIS projects have previously been viewed primarily as technical exercises but it is now evident that the success of GIS projects depends as much upon organisational issues as upon technicalities GIS projects have socio organisational contexts which must be taken into account if such projects are to succeed The book presents an overview of the human side of GIS both individual and organisational

Formal Foundations for Software Engineering Methods Heinrich Hußmann, 1997-09-23 In this book Hussmann builds a bridge between the pragmatic methods for the design of information systems and the formal mathematical background Firstly the principal feasibility of an integration of the different methods is demonstrated Secondly the formalism is used as a systematic semantic analysis of the concepts in SSADM a British standard structured software engineering method Thirdly a way of obtaining a hybrid formal pragmatic specification using a combination of SSADM notations and formal SPECTRUM specifications is shown This well written book encourages scientists and software engineers to apply formal methods to practical software development problems

Information Systems Development Paul Beynon-Davies, 2016-01-14 In this third edition the author has arranged the material in five major parts context tools techniques methods management and discipline Within the parts popular chapters have been retained and updated to reflect modern developments in the area of information systems development A number of new chapters have been included on topics such as object oriented analysis and design methods rapid applications development and business process re engineering Each chapter contains a number of case studies illustrating the frameworks techniques and concepts discussed A number of exercises are also included to test the understanding of the material

Measuring Intangible Value David Ivor William Taylor, 2008 Measurement of intangible benefits is a major problem for governments commercial organizations academics and professionals involved in such disciplines as accountancy and economics But it doesn't have to be difficult Measuring Intangible Value brings clarity and understanding to this complex issue Utilizing more than seven years of research into the concept of intangible value measurement David I W Taylor attempts to bring two theories of intangible measurement together through the application of a redefined concept of value These two theories include Michael Porter's value chain research and Thomas Saaty's structured decision making method analytical hierarchic process and analytical network process This study also develops the use of Porter's value chain theory to develop a process by which value can be categorized and then measured and also considers identification of intangible benefits through categorization These categories are then formulated as to the least amount of groupings necessary to assist in the options appraisal of project outcomes through the quantification of structured decision making Measuring Intangible Value brilliantly forges a relationship between academic theories to create a practical business model perfect for those in any type of organization
