#### **Stability In Underground Mining:**

Rock Mass Stability Around Underground Excavations in a Mine Yan Xing, Pinnaduwa Kulatilake, Louis Sandbak, 2019-11-20 Stability of underground excavations is of great importance to an operating mine because it ensures the safety of the working people and operating equipment and successful ore production Due to the complex geological conditions and mine constructions and variability and uncertainty in estimating rock mass mechanical properties the assessment of rock mass stability for an underground mine is extremely challenging and difficult Tackling of this difficult problem is not covered in detail in any of the textbooks currently available in the rock mechanics literature This monograph aims to cover this gap in the rock mechanics and rock engineering field. This monograph provides detailed procedures for the stability assessment and support design for an underground mine case study It covers the background of the mine site including the monitored deformation data the state of art methodologies for the stability analysis of rock masses around underground excavations performed laboratory tests estimation of the rock mass properties a brief theory and background of the 3 D Distinct Element Code 3DEC and numerical modeling of underground rock mass stability including investigation of the effectiveness of rock supports The monograph is an excellent reference for the senior undergraduates graduate students researchers and practitioners who work in the Underground Rock Mechanics and Rock Engineering area in the Mining Engineering Civil Geotechnical Engineering and DEM Distinct Element Method Numerical modeling First International Conference on Stability in Underground Mining, August 16, 17, 18, 1982, Vancouver, British Columbia, Canada C. Ground Engineering - Principles and Practices for Underground Coal Mining J.M. Galvin, 2016-02-02 This book teaches readers ground engineering principles and related mining and risk management practices associated with underground coal mining It establishes the basic elements of risk management and the fundamental principles of ground behaviour and then applies these to the essential building blocks of any underground coal mining system comprising excavations pillars and interactions between workings Readers will also learn about types of ground support and reinforcement systems and their operating mechanisms. These elements provide the platform whereby the principles can be applied to mining practice and risk management directed primarily to bord and pillar mining pillar extraction longwall mining sub surface and surface subsidence and operational hazards The text concludes by presenting the framework of risk based ground control management systems for achieving safe workplaces and efficient mining operations In addition a comprehensive reference list provides additional sources of information on the subject Throughout a large variety of examples show good and bad mining situations in order to demonstrate the application or absence of the established principles in practice Written by an expert in underground coal mining and risk management this book will help students and practitioners gain a deep understanding of the basic principles behind designing and conducting mining operations that are safe efficient and economically viable Provides a comprehensive coverage of ground engineering principles within a risk management framework Features a large variety of examples that show good and poor mining situations in order to demonstrate the application of the established principles in practice Ideal for students and practitioners About the author Emeritus Professor Jim Galvin has a relatively unique combination of industrial research and academic experience in the mining industry that spans specialist research and applied knowledge in ground engineering mine management and risk management His career

encompasses directing ground engineering research groups in South Africa and Australia practical mining experience including active participation in the mines rescue service and responsibility for the design operation and management of large underground coal mines and for the consequences of loss of ground control as a mine manager appointments as Professor and Head of the School of Mining Engineering at the University of New South Wales and safety advisor to a number of Boards of Directors of organisations associated with mining Awards Winner of the ACARP Excellence Research Award 2016 The Australian Coal Industry's Research Program selects recipients to receive ACARP Research and Industry Excellence Awards every two years The recipients are selected on the recommendation of technical committees They are honored for achievement of a considerable advance in an area of importance to the Australian coal mining industry An important criterion is the likelihood of the results from the project being applied in mines Winner of the Merv Harris Award from the Mine Managers Association of Australia The Merv Harris Award is named for Merv Harris who donated money to be invested for a continuing award in 1988 With the award the Mine Managers Association of Australia honors members of the Association who demonstrate technical achievement in the Australian Coal Mining Industry The first award was granted in 1990 since then only two people have received this honor The book has received the following awards AGS Australian Geomechanics Society congratulates Dr Galvin for these awards Information Circular ,1986 **Cutter Roof Failure** John L.
