

Stable modules and Wall's D(2)-problem

F. E. A. Johnson

Abstract. The D(2)-problem is to determine whether for a three-dimensional complex X , the vanishing of 3-dimensional cohomology, in all coefficients, is enough to guarantee that X is homotopically two-dimensional. We show that for finite complexes with finite fundamental group, a positive solution to the D(2)-problem is obtained precisely when all stably free algebraic 2-complexes are geometrically realizable.

The proof makes very strong use of techniques which apply to finite fundamental groups but not more generally; in particular, Yoneda's Theorem that, for finite groups, group cohomology is representable by stable modules of finite type, and also the Swan-Jacobinski Cancellation Theorem for such stable modules.

1. Introduction

In Wall's fundamental study of Poincaré Duality [30], a finite Poincaré complex of dimension n is envisaged as a cell complex of the following *standard form*

$$(*) \quad M(\alpha) = X \cup_{\alpha} e^n$$

where X is a finite complex of dimension $\leq n-1$ and $\alpha : S^{n-1} \rightarrow X$ is a continuous map. This approach encounters a difficulty in dimension three, where it is unclear whether we can take X to be of geometrical, rather than merely cohomological, dimension two (see also [29]). This prompts the celebrated

D(2) problem. Suppose that X is a finite three dimensional cell complex such that $H^3(X; \mathcal{B}) = 0$ for all local coefficient systems \mathcal{B} on X . Is X homotopy equivalent to a finite 2-dimensional complex?

The D(2)-problem is naturally parametrized by the fundamental group of the complex involved; we say that a finitely presented group G possesses the D(2)-

Web Reasoning and Rule Systems Axel Polleres, Terrance Swift, 2009-10-14 The promise of the Semantic Web at its most expansive is to allow knowledge to be freely accessed and exchanged by software It is now recognized that if the Semantic Web is to contain deep knowledge the need for new representation and reasoning techniques is going to be critical These techniques need to find the right trade off between expressiveness scalability and robustness to deal with the inherently incomplete contradictory and uncertain nature of knowledge on the Web The International Conference on Web Reasoning and Rule Systems RR was founded to address these needs and has grown into a major international forum in this area The third RR conference was held during October 25-26 2009 in Chantilly Virginia co-located with the International Semantic Web Conference ISWC 2009 This year 41 papers were submitted from authors in 21 countries The Program Committee performed outstandingly to ensure that each paper submitted to RR 2009 was thoroughly reviewed by at least three referees in a short period of time The resulting conference presented papers of high quality on many of the key issues for reasoning on the Semantic Web RR 2009 was fortunate to have two distinguished invited speakers Robert Kowalski in his talk integrating Logic Programming and Production Systems with Abductive Logic Programming Agents addressed some of the fundamental considerations hindering reasoning about evolving systems Benjamin Grosz's talk SILK Higher Level Rules with Defaults and Semantic Scalability described the design of a

major next generation rule system The invited tutorial Uncertainty Reasoning for the Semantic Web by Thomas Lukasiewicz provided perspectives on a central issue in this area

groups The unified background makes transparent an entire range of properties of wavelets and coherent states Many concrete examples such as coherent states from semisimple Lie groups Gazeau Klauder coherent states coherent states for the relativity groups and several kinds of wavelets are discussed in detail The book concludes with a palette of potential applications from the quantum physically oriented like the quantum classical transition or the construction of adequate states in quantum information to the most innovative techniques to be used in data processing Intended as an introduction to current research for graduate students and others entering the field the mathematical discussion is self contained With its extensive references to the research literature the first edition of the book is already a proven compendium for physicists and mathematicians active in the field and with full coverage of the latest theory and results the revised second edition is even more valuable
