Homotopical Algebraic Geometry II: Geometric Stacks and Applications Bertrand Toën, Gabriele Vezzosi, 2008 This is the second part of a series of papers called HAG devoted to developing the foundations of homotopical algebraic geometry The authors start by defining and studying generalizations of standard notions of linear algebra in an abstract monoidal model category such as derivations tale and smooth morphisms flat and projective modules etc They then use their theory of stacks over model categories to define a general notion of geometric stack over a base symmetric monoidal model category C and prove that this notion satisfies the expected properties

Stacks and Categories in Geometry, Topology, and Algebra Tony Pantev, Carlos Simpson, Bertrand Toën, Michel Vaquié, Gabriele Vezzosi, 2015-06-26 This volume contains the proceedings of the CATS4 Conference on Higher Categorical Structures and their Interactions with Algebraic Geometry Algebraic Topology and Algebra held from July 2 7 2012 at CIRM in Luminy France Over the past several years the CATS conference series has brought together top level researchers from around the world interested in relative and higher category theory and its applications to classical mathematical domains Included in this volume is a collection of articles covering the applications of categories and stacks to geometry topology and algebra Techniques such as localization model categories simplicial objects sheaves of categories mapping stacks dg structures hereditary categories and derived stacks are applied to give new insight on cluster algebra Lagrangians trace theories loop spaces structured surfaces stability and coherent complexes and 1 affineness showing up in geometric Langlands branching out to many related topics along the way

Thermoacoustics Gregory W. Swift, 2017-10-05 This updated new edition provides an introduction to the field of thermoacoustics All of the key aspects of the topic are introduced with the goal of helping the reader to acquire both an intuitive understanding and the ability to design hardware build it and assess its performance Weaving together intuition mathematics and experimental results this text equips readers with the tools to

bridge the fields of thermodynamics and acoustics At the same time it remains firmly grounded in experimental results basing its discussions on the distillation of a body of experiments spanning several decades and countries The book begins with detailed treatment of the fundamental physical laws that underlie thermoacoustics It then goes on to discuss key concepts including simple oscillations waves power and efficiency The remaining portions of the book delve into more advanced topics and address practical concerns in applications chapters on hardware and measurements With its careful progression and end of chapter exercises this book will appeal to graduate students in physics and engineering as well as researchers and practitioners in either acoustics or thermodynamics looking to explore the possibilities of thermoacoustics This revised and expanded second edition has been updated with an eye to modern technology including computer animations and DeltaEC examples

Hands-On Data Structures and Algorithms with Python Dr. Basant Agarwal,2022-07-29 Understand how implementing different data structures and algorithms intelligently can make your Python code and applications more maintainable and efficient Key Features Explore functional and reactive implementations of traditional and advanced data structures Apply a diverse range of algorithms in your Python code Implement the skills you have learned to maximize the performance of your applications Book Description Choosing the right data structure is pivotal to optimizing the performance and scalability of applications This new edition of Hands On Data Structures and Algorithms with Python will expand your understanding of key structures including stacks queues and lists and also show you how to apply priority queues and heaps in applications You ll learn how to analyze and compare Python algorithms and understand which algorithms should be used for a problem based on running time and computational complexity You will also become confident organizing your code in a manageable consistent and scalable way which will boost your productivity as a Python developer By the end of this Python book you ll be able to manipulate the most important data structures and algorithms to more efficiently store organize and access data in your applications What you will learn Understand common data structures and algorithms using examples diagrams and exercises Explore how more complex structures such as priority queues and heaps can benefit your code Implement searching sorting and selection algorithms on number and string sequences Become confident with key string matching algorithms Understand algorithmic paradigms and apply dynamic programming techniques Use asymptotic notation to analyze algorithm performance with regard to time and space complexities Write powerful robust code using the latest features of Python Who this book is for This book is for developers and programmers who are interested in learning about data structures and algorithms in Python to write complex flexible programs Basic Python programming knowledge is expected

The Geometry, Topology And Physics Of Moduli Spaces Of Higgs Bundles Richard Wentworth,Graeme Wilkin,2018-06-28 In the 25 years since their introduction Higgs bundles have seen a surprising number of interactions within different areas of mathematics and physics There is a recent surge of interest following Ng Bau Ch u s proof of the Fundamental Lemma and the work of Kapustin and Witten on the Geometric Langlands

program The program on The Geometry Topology and Physics of Moduli Spaces of Higgs Bundles was held at the Institute for Mathematical Sciences at the National University of Singapore during 2014 It hosted a number of lectures on recent topics of importance related to Higgs bundles and it is the purpose of this volume to collect these lectures in a form accessible to graduate students and young researchers interested in learning more about this field *Scientific Canadian*

Andrew T. Campbell: Message from the Technical Program Chairs. Welcome to the proceedings of the 10th International Conference on Distributed Computing and Networking (ICDCN 2009). As ICDCN celebrates its 10th anniversary, it has become an important forum for disseminating the latest research results in distributed computing and networking. We received 179 submissions from all over the world, including Algeria, Australia, Canada, China, Egypt, France, Germany, Hong Kong, Iran, Italy, Japan, Malaysia, The Netherlands, Poland, Singapore, South Korea, Taiwan, and the USA, besides India, the host country. The submissions were read and evaluated by the Program Committee, which consisted of 25 members for the Distributed Computing Track and 28 members for the Networking Track, with the additional help of external reviewers. The Program Committee selected 20 regular papers and 32 short papers for inclusion in the proceedings and presentation at the conference. We were fortunate to have several distinguished scientists as keynote speakers. Andrew Campbell (Dartmouth College, USA), Maurice Herlihy (Brown University, USA), and P. R. Kumar (University of Illinois Urbana-Champaign) delivered the keynote address. Krithi Ramamritham (IIT Bombay, India) delivered the A. K. Choudhury Memorial talk.
