## **Stacs 90 7th Annual Symposium On Theoret:**

**STACS 90** Christian Choffrut, Thomas Lengauer, 1990-02-07 The Symposium on Theoretical Aspects of Computer Science is organized jointly by the Special Interest Group for Applied Mathematics of AFCET Association Française de Cybernétique Economique et Technique and the Special Interest Group for Theoretical Computer Sciences of GI Gesellschaft für Informatik. It is held alternately in France and in Germany. This volume contains two invited papers on combinatorial methods in computer science and on the complexity of local optimization and 24 contributions on theoretical aspects of computer science. Some software systems are presented showing the possibilities of applying theoretical research to the realization of software tools. Combinatorics on Traces Volker Diekert, 1990-09-12 The construction of a software system is a task that has to be structured to ensure that the software product fulfills all expectations and the process of producing it remains manageable and reliable. Mathematical methods including logic algebra and functional calculus are needed to support structuring and provide notations and basic formal concepts for the foundations of software engineering. Mathematical methods of programming reflect the need for modularization and abstraction and suggest appropriate goal directed procedures for the construction of software programs. This volume contains the proceedings of an International Summer School held at Marktoberdorf in 1990, the 11th in a series on mathematical methods in programming. Outstanding scientists contributed papers centered around logical and functional calculi for the specification, refinement and verification of programs and program systems and remarkable examples for the formal development of proofs and algorithms are given. Term Rewriting Hubert Comon, Jean-Pierre Jouannaud, 1995-04-25 This volume contains thoroughly revised versions of the contributions presented at the French Spring School of Theoretical Computer Science held in Font Romeu, France, in May 1993. This seminar was devoted to rewriting in a broad sense as rewriting is now an important discipline relating to many other areas such as formal languages, models of concurrency, tree automata, functional programming, languages, constraints, symbolic computation and automated deduction. The book includes a number of surveys contributed by senior researchers as well as a few papers presenting original research of relevance for the broader theoretical computer science community.

Fundamentals of Computation Theory Zoltan Esik, 1993-08-04 This volume contains the proceedings of the Ninth Conference on Fundamentals of Computation Theory (FCT 93) held in Szeged, Hungary, in August 1993. The conference was devoted to a broad range of topics including semantics and logical concepts in the theory of computing and formal specification, automata and formal languages, computational geometry, algorithmic aspects of algebra and algebraic geometry, cryptography, complexity, sequential, parallel, distributed computing, structure, lower bounds, complexity of analytical problems, general concepts, algorithms, efficient, probabilistic, parallel, sequential, distributed, counting and combinatorics in connection with mathematical computer science. The volume contains the texts of 8 invited lectures and 32 short communications selected by the international program committee from a large number of submitted papers. □□□□□□□□, 1990
