## **Stalingrad The Vital 7 Days The Last Desperate German Attempt To Capture The City:**

**Enduring the Whirlwind** Gregory Liedtke, 2016-09-19 Despite the best efforts of a number of historians many aspects of the ferocious struggle between Nazi Germany and the Soviet Union during the Second World War remain obscure or shrouded in myth One of the most persistent of these is the notion largely created by many former members of its own officer corps in the immediate postwar period that the German Army was a paragon of military professionalism and operational proficiency whose defeat on the Eastern Front was solely attributable to the amateurish meddling of a crazed former Corporal and the overwhelming numerical superiority of the Red Army A key pillar upon which the argument of German numerical weakness vis vis the Red Army has been constructed is the assertion that Germany was simply incapable of providing its army with the necessary quantities of men and equipment needed to replace its losses In consequence as their losses outstripped the availability of replacements German field formations became progressively weaker until they were incapable of securing their objectives or eventually of holding back the swelling might of the Red Army This work seeks to address the notion of German numerical weakness in terms of Germany's ability to replace its losses and regenerate its military strength and assess just how accurate this argument was during the crucial first half of the Russo German War June 1941 June 1943 Employing a host of primary documents and secondary literature it traces the development and many challenges of the German Army from the prewar period until the invasion of the Soviet Union in June 1941 It continues on to chart the first two years of the struggle between Germany and the Soviet Union with a particular emphasis upon the scale of German personnel and equipment losses and how well these were replaced It also includes extensive examinations into the host of mitigating factors that both dictated the course of Germany's campaign in the East and its replacement and regeneration capabilities In contrast to most accounts of the conflict this study finds that numerical weakness being the primary factor in the defeat of the Ostheer specifically as it relates to the strength and condition of the German units involved has been overemphasized and frequently exaggerated In fact Germany was actually able to regenerate its forces to a remarkable degree with a steady flow of fresh men and equipment and German field divisions on the Eastern Front were usually far stronger than the accepted narratives of the war would have one believe

**Death of the Wehrmacht** Robert M. Citino, 2007-10-22 For Hitler and the German military 1942 was a key turning point of World War II as an overstretched but still lethal Wehrmacht replaced brilliant victories and huge territorial gains with stalemates and strategic retreats In this major reevaluation of that crucial year Robert Citino shows that the German army's emerging woes were rooted as much in its addiction to the war of movement attempts to smash the enemy in short and lively campaigns as they were in Hitler's deeply flawed management of the war From the overwhelming operational victories at Kerch and Kharkov in May to the catastrophic defeats at El Alamein and Stalingrad Death of the Wehrmacht offers an eye opening new view of that decisive year Building upon his widely respected critique in The German Way of War Citino shows how the campaigns of 1942 fit

within the centuries old patterns of Prussian German warmaking and ultimately doomed Hitler's expansionist ambitions. He examines every major campaign and battle in the Russian and North African theaters throughout the year to assess how a military geared to quick and decisive victories coped when the tide turned against it. Citino also reconstructs the German generals' view of the war and illuminates the multiple contingencies that might have produced more favorable results. In addition, he cites the fatal extreme aggressiveness of German commanders like Erwin Rommel and assesses how the German system of command and its commitment to the independence of subordinate commanders suffered under the thumb of Hitler and chief of staff General Franz Halder. More than the turning point of a war, 1942 marked the death of a very old and traditional pattern of warmaking with the classic German way of war unable to meet the challenges of the twentieth century. Blending masterly research with a gripping narrative, Citino's remarkable work provides a fresh and revealing look at how one of history's most powerful armies began to founder in its quest for world domination.
