Materials and Process Selection for Engineering Design Mahmoud M. Farag,2013-11-19 Introducing a new engineering product or changing an existing model involves making designs reaching economic decisions selecting materials choosing manufacturing processes and assessing its environmental impact These activities are interdependent and should not be performed in isolation from each other This is because the materials and proce **Ocean Resources** D.A. Arduş,M.A. Champ,2012-12-06 Ocean engineering is generally considered to be concerned with studies on the effects of the ocean on the land and with the design construction and operation of vehicles structures and systems for use in the ocean or marine environment The practice of engineering differs from that of science in both motivations and objectives Science seeks understanding of the principles of nature in terms of generalizations expressed as laws and classifications Engineering seeks the application of knowledge of the physical and natural world to produce a benefit expressed as a device system material and or process From the standpoint of the financial sponsors of an engineering project the ideal approach is one of minimal risk in which only proven knowledge materials and procedures are employed There is frequent departure from this ideal in anticipation of the increased benefit expected from a large increase in performance of a structure or device The process of acquiring this new capability is engineering research Historically ocean engineering developed with the application of engineering principles and processes to the design of ships and later to the machinery that propels them In most societies naval architecture and marine engineering are recognised as the origin of ocean engineering In fact the design of a ship constitutes the original systems engineering programme involving hydrodynamics fluid flow structural design machinery

Design for Manufacturing and Assembly O. Molloy, E.A. Warman, S. Tilley, 2012-12-06 In order to compete in the current commercial environment companies must produce greater product variety at lower cost all within a reduced product life cycle To achieve this a concurrent engineering philosophy is often adopted In many cases the main realization of this is Design for Manufacture and Assembly DFM A There is a need for in depth study of the architectures for DFM A systems in order that the latest software and knowledge based techniques may be used to deliver the DFM A systems of tomorrow This architecture must be based upon complete understanding of the issues involved in integrating the design and manufacturing domains This book provides a comprehensive view of the capabilities of advanced DFM A systems based on a common architecture
